Statistics obtained by the New York *Press* from the various labor associations give the following figures as presenting a conservative estimate of the present number of unemployed work people in the five large cities named: New York, 115,000 to 140,000; Chicago, 124 000; Philadelphia, 90,000; Boston, 39,000, and Cincinnati, 25,000. Relief associations throughout the country, whether of a permanent or temporary nature, are doing their utmost to mitigate the prevailing distress, but their resources are already overtaxed, while the number of candidates for relief is constantly on the increase owing to the continued lack of employment and the advent of winter weather.

Pittsburgh's city officials, in conference last week, decided to raise $100,000 by popular subscription, in order to aid the unemployed and deserving poor, the money to be expended in work on city improvements.

It is reported that several mills of Pittsburgh and vicinity are only paying $4 per ton for puddling. This, it is stated, is causing great dissatisfaction among the operators of mills paying the Amalgamated price, $4.75 per ton.

Trade Publications.

ONE OF THE MOST COMPLETE CATALOGUES of railway and machinists' tools and supplies ever issued is that just published by Manning, Maxwell & Moore of 111 and 113 Liberty street, New York. It contains 1103 imperial quarto pages of paper of fine quality; the 6000 engravings with which the book is embellished and the press work are of a very high grade; the binding is in keeping with a work so complete and expensive. In a notice of this description it is impossible to convey an adequate idea of the field covered, since the index, which merely names the several machines and appliances, occupies 12½ pages. The catalogue describes and illustrates stand ard types of every kind of machine tools, and many forms of special designs intended for some particular service, and also mentions the wide range of attachments and appliances necessarily belonging to such tools. No inconsiderable space is devoted to steam engines, pumps, boilers, pipe and fittings and machinery belonging with the same. In addition a wide range of small tools are mentioned. The catalogue, in short, meets the requirements of manufacturers using large or small tools or machines of every description.

Pumping Engines for New York.

Some time since the Department of Public Works of New York asked for proposals for furnishing material, building and erecting pumping engines, boilers and appurtenances for the high service works at the new aqueduct, between Tenth avenue and the Harlem River. It was thought by some of the bidders that the specifications were too rigid and that more option should be given them in the matter of certain details. When the bids were opened it was found that the difference between the highest and the lowest was so great that the Commissioners decided to reject them all and to draw up new specifications, somewhat more elastic in nature, and readvertise for new bids. The second bids have just been made public, and are as follows:

	Two 10,000,000-gallon capacity.	Two 4,000,000-gallon capacity.	Totals.
Henry R. Worthington.	$30,250	$28,225	$116,950
Snow Steam Pump Works	32,000	29,500	123,000
Groshon High Duty Pumping Engine Company	31,250	26,000	114,500
E. P. Allis Company	37,000	35,000	144,000
Geo. F. Blake Mfg. Company	27,500	27,500	110,000
Holly Mfg. Company	36,800	34,850	143,300

The contract has therefore been awarded to the Geo. F. Blake Mfg. Company of New York and East Cambridge, Mass., at their bid of $110 000.

The contract calls for two vertical triple expansion 10,000,000-gallon engines, boilers and appurtenances complete, and two vertical triple expansion 4,000,000 gallon pumping engines, boilers and appurtenances complete, making a total capacity of 28,000,000 gallons per day. The engines will have automatic cut off and will be operated with 160 pounds of steam. The makers say that they will embody the most modern ideas of engineering, and that in constructing them many of the old time customs will be abandoned, and that the plant, as a whole, will be one of the finest that has ever been built in this country.

The specifications provide that the plant when completed must be capable of obtaining a duty of 90,000,000 foot-pounds of work for each 100 pounds of first-class coal consumed by the boilers.

When completed each reservoir pumping engine will be run continuously for 24 hours to ascertain whether it does the maximum work required of raising each 24 hours 10,000,000 gallons of water into the stand pipe 100 feet above the level of delivery in supply tank, and shall be run continuously for 24 hours to ascertain whether it does the minimum work required of raising each 24 hours 5,000,000 gallons of water into the stand pipe 100 feet above the level of delivery in supply tank.

In the case of the engines of smaller capacity, they will be required to undergo a similar test, except that the amount of water raised will be 4,000,000 gallons, and the hight of the tower 230 feet. The work must be completed within 300 days.

Plucking up Courage.

The West was hit particularly hard during the financial flurry of last summer. Bank failures were more numerous by far than in the East or South. Business was therefore depressed more than in other sections of the country. Chicago, it is true, was abundantly supplied with currency on account of the World's Fair, which drew supplies from all sections, and St. Louis was almost phenomenally free from financial disturbances, but both cities suffered greatly through the prostration of general business in contiguous territory. Recovery has been very slow from this condition, but there are indications now of growing confidence in the minor industries, which form a very important part of the business fabric. Establishments which have been closed for lack of work and others that have stood idle since the bankruptcy of their owners are now getting into operation again. Their wheels may move slowly for a time, and but few workmen may be employed instead of the usual force, but that is to be expected. A great point is gained when the way opens for an actual start. A prostrate man gets on his knees before he rises. The fact that he can get on his knees, however, shows that he is trying to get up. It is just so with the manufacturers to whom we allude. Their efforts to run on part time or with partial force show that they have not lost all their business courage, and once having made a start they will not only acquire more confidence themselves, but will instill some into their neighbors.

While great operations will be checked until the uncertainties of tariff legislation are cleared up, there is, nevertheless, continual consumption or waste, which must be renewed. The country cannot come to a complete standstill with all the consumption stopped. The heavy curtailment of productive industries during the past summer and autumn cut down the stocks of manufactured goods in many lines to a point requiring almost an uninterrupted flow of those goods from loom or workshop through the hands of distributors to the consumer. Such a movement as this cannot be stopped unless the purchasing power of the people is absolutely cut off or factories get to running more generally and accumulate stocks in excess of the wants of the people. Neither of these contingencies is imminent. On the contrary, there is a decided probability that consumption will continue to increase, keeping pace with the gradual increase in output. This statement may be criticised by those who only draw comparisons between their present volume of business and that of the corresponding time last year, but it will be approved if comparisons are made on the basis of conditions ruling last summer and during the early weeks of autumn.

There is a disposition among Western business men to take quite a hopeful view of the situation, except perhaps those who are directly interested in iron ore mining. The rapid accumulation of money at the financial centers, surpassing anything previously known in the history of the country, is looked upon as affording a strong argument in favor of an early improvement in general business. The savings banks of Chicago, by concerted action, have reduced the rate of interest on deposits from 4 to 3 per cent. per annum, with the avowed object of discouraging further deposits and to force surplus money into business channels in which it will do more good than in the savings banks. At the same time important local projects are coming forward for the investment of capital, the promoters being inspired by the belief that this is a good time to launch them when money is abundant, the rate of interest is low, materials of all kinds are cheaper than ever before known, and labor is anxious to be employed. They argue that the time to make great improvements is when business is depressed and every advantage is on the side of the capitalist, instead of waiting until times improve and labor and material are in active demand.

The impression is also gaining ground that the new Tariff bill will be passed in the form in which it has been reported, but that modifications will be made in its most radical provisions. Whether this impression is well founded or is merely born of a spirit of excessive hopefulness, it is having an effect on quite a considerable class of manufacturers and business men, who are, therefore, eliminating the tariff question from their consideration of influences governing the course of trade within a reasonable period in the future. If they have accurately diagnosed the tariff situation, and the bill is amended as it progresses so that great interests are not seriously disturbed, there is no other obstacle barring the way to a rapid recovery of the ground lost by Western business interests in 1893.

One feature of the McKinley tariff and the measures preceding it is conspicuous by its absence in the proposed measure now before the country. We refer to that clause which classifies separately bars and billets made with the aid of charcoal as a fuel and imposes upon them a duty of $22 per ton. There is a good deal of variation in the price of Swedish material of this class, but we understand that £6. 10/, at works, is the selling price now for good grades. This would make the duty $9.50 against $22, or a cut of more than one-half. While it would not influence the common grades of American soft steel and puddled iron, it would have a very great effect upon the higher qualities of American material, the market for which would be practically delivered over to the Swedish producers.

The Tin Plate Trade.

Some advantages derived from the establishment of a tin plate industry in this country have been strikingly manifested during the business depression of this year. Jobbing houses have been enabled to curtail their stocks of tin plates just as they have curtailed their stocks of other goods. Instead of purchasing large quantities, as they would have been obliged to do if importing, and thus having a considerable amount of capital steadily tied up, they have drawn on the manufacturers for just what was needed for an assortment from time to time. American manufacturers of tin plates have thus had to carry stocks for their customers in the same way that other manufacturers have been obliged to do in every time of depression or falling markets. It is an advantage so much appreciated that frequent reference is made to it by jobbers who are solicited to buy foreign tin plates. Within a few days a very large order has been secured by a Western tin plate works from a jobber, with the understanding that shipments are to be made in such quantities as are needed to supply his trade, with payments made accordingly. There is little question that the general depression in business has operated greatly to the advantage of American tin plate makers in this way, and that their trade has grown much faster among jobbers than would have been the case in the same period if money had been easy and the times prosperous. Manufacturers of tinware have pursued the same policy as the jobbers, but perhaps not to the same extent, as they could not run the risk of finding themselves suddenly out of stock.

Lest it be claimed that the figures are excessive which have been chosen by American manufacturers to illustrate the magnitude of the cuts proposed by the Wilson bill, under the guise of ad valorem rates of duty, we place before our readers some data above all caviling. Every two months the arbitrator of the North of England iron trade goes over the books of the works associated with the sliding scale and announces the average prices at which product has sold. This forms the basis of the award for wages for the succeeding period of two months. Mr. Waterhouse has just reported these figures. Thus there have been sales of 8390 tons of iron plate on which the average net price was £4. 11/5.94. This figures out 0.988

Hosted by Google

cent, so that the duty would be 0.296 cent, as compared with the present rate of 0.65 cent per pound. In other words, the duty has been cut more than one-half. American plates have not sold as low as 1.50 cent, tidewater, even during the present panic period. Should prices rise even one-tenth, then foreign material would come in, since price plus duty figures out 1.284 cents, which would leave nearly $5 per ton to cover costs and freight. On bars the arbitrator reports sales of 11,683 tons at an average price of £5. 2/2.72, which figures 1.10 cents per pound and makes the duty 0.33 cent. We do not know whether Mr. Waterhouse arrives at his average by taking in the prices realized on extra sizes. If he does, then there is danger in this direction when our recovery comes. On angles the average selling price of 3839 tons was £4. 13/4.60, which is equivalent to 1.01 cents per pound and makes the Wilson duty 0.30 cent, as compared with 0.9 cent now, a reduction to one-third. With angles down to their lowest notch of 1.55 cents, tidewater, now, English competition under the Wilson tariff would be very uncomfortably close.

The "World" and the Iron Trade.

The New York *World* has seen fit in its issue of December 12 to question the accuracy of a series of figures presented by *The Iron Age* in a review of the Wilson bill. We care nothing for the reputation of our contemporary as an authority in the iron trade, nor have we any interest in vindicating our own before its clientele. We want the public to know the facts, and shall simply exercise the privilege of reviewing our reviewer, analyzing the *World's* statements, paragraph by paragraph. We quote:

The Iron Age deals first with the proposed cut in the duty on pig iron from $6.72 a ton to 22½ per cent. It asserts that certain brands of Cumberland Bessemer pig (foreign) have sold as low as $10.25 put on board ship. Another foreign brand, Collins Scotch foundry, has sold down to $12.50. Another very cheap foreign pig has been down to $7.07. Alabama pig has been down to $7 50 at the furnace. Adding $2 for freight to the seaboard and $2 more for water freight to New York, Alabama pig at this price would be brought to New York at $11.50 a ton. In reality the freight charge to New York is $1.50, but we will let that misrepresentation pass.

The freight on pig iron from Birmingham, Ala., to New York, is $4.01. We have stated the truth. The *World* is wrong.

Taking the Cumberland Bessemer for comparison, *The Iron Age* compares high-priced English with low-priced American pig. We find that the foreign pig would pay a duty of $2.31. The freight would be, say, 75 cents. Therefore, the Cumberland pig would be landed in New York for $13.31 On *The Iron Age's* own showing, therefore, the Alabama pig makers would have a margin for profit of $1.81 a ton, or nearly 16 per cent.

The trouble with this part of the criticism of the *World* is that there is not a pound of Bessemer pig made in Alabama nor elsewhere in the South, except by the one small furnace, the Cranberry, which makes about 100 tons per week and is not in blast now. Prices on the mill and foundry grades produced in the South have nothing to do with values on domestic or foreign Bessemer pig. If our contemporary wants to make a comparison let it turn to Pittsburgh, where Bessemer pig is selling cheapest in the country, say $11, and add $2.80 for freight, or $13.80, delivered, New York, as compared with $13.31 for Cumberland.

The cut in the rate on steel rails is the next subject of complaint. *The Iron Age* asserts that English rails may be bought at the works for $17.50. The proposed new tariff rate is 25 per cent., which would make the duty $4.37 instead of $13.44, the tax under the present law. According to *The Iron Age's* own figures the freight charge and insurance would be $2.25 a ton. Therefore a ton of English rails landed in New York would cost, duty paid at the Wilson bill rates, $24.12. As the American rail makers are willing to sell their product at $24, it follows that the Wilson bill furnishes them ample protection. Moreover, it is not true that English rails can be bought as low as $17.50. The price is about $18, which would make the rails landed in New York, paying the Wilson rate of duty, worth $24.70. The Carnegie works turn out rails at about $15.50 the ton, and the freight from Pittsburgh to New York is $2.80, so that the rail stands the manufacturer in $18.30, leaving him a profit of at least $6 a ton, or nearly 40 per cent., if he undersells the English rail by 40 cents on the ton. But if he would enjoy this profit he must then make a rail as good as the English. This might be a hardship to him, but it would be a blessing to the railroads and to shippers.

Recent sales at Montreal of English steel rails have been made at a shade over $20, delivered, which is on the basis of $17.50, English works. We assert again that steel rails can be bought in the English market at £3. 10/. We confess that Mr. Carnegie has not told us recently what his rails cost him.

The Iron Age's statement as to beams is very inaccurate. The *World* has undertaken to inquire for itself as to the facts concerning these articles. Instead of $18.75 steel beams cost on board at Antwerp about $26.25. The proposed duty and the freight, which is $2.50 instead of $1.50 as stated by *The Iron Age*, would make the German beams cost very nearly $39 a ton. As our own makers, according to *The Iron Age's* New York market quotations, are selling beams 15 feet long at from $33 to $35 a ton, it is impossible to see how the reduction can injure them.

We know that steel beams have sold at the price we named, to capture business. We stated distinctly that it was at interior German mill. This is the figure upon which the calculation must be made, because the duty is assessed on the price at mill and not on the f.o.b Antwerp price. We may add that our figuring was checked by the representative of one of the largest and oldest New York importing houses.

We leave the evidence as it stands to the judgment of the iron trade, American and foreign, and need not even point in support of our own cause to the manifest ignorance of our critic.

CORRESPONDENCE.

The New York Air Brake Company.

To the Editor: On page 1038, issue of December 7 of *The Iron Age*, under the heading of "Machinery," we notice an article referring to the recent decision in the United States Court in regard to the suit between Westinghouse and the New York Air Brake Company. The concluding paragraph of this notice is so at variance with the facts that we feel justified in asking that in your next issue the actual facts be stated. The paragraph we refer to reads:

"The officials of the New York Air Brake Company say they will take an appeal, and if they succeed in reversing the judgment their works at Watertown, N. Y., which have been closed by the injunction, may be started up again."

Such information was certainly not obtained from the officers of the New York Air Brake Company. Our works are not closed by the injunction, and will continue to run as heretofore. The decision is on two minor parts of our apparatus, one of which was discarded two years ago, not now in use, and the other is on a very small part of the triple valve. Even if the decision is sustained in the Court of Appeals there is nothing whatever to prevent the continued manufacture and sale of every portion of our present brake and signal apparatus, excepting a certain form of triple valve, and if the decision is reversed in our favor we can, of course, continue to furnish that form. In the meantime, as only a slight modification is required to make the triple valve free, we, of course, have only to make that slight alteration, and continue to furnish that also.

Trusting that these matters will have your attention, we remain,

Yours very truly,

THE NEW YORK AIR BRAKE COMPANY,
Per C. E. LEACH.

NEW YORK, December 9, 1893.

Washington News.

(*From our Special Correspondent.*)

WASHINGTON, D. C., December 12, 1893.

The full Committee on Ways and Means are having two sessions a day in hopes of completing the Tariff Revision bill for report to the House before the close of the present week. Representatives Harter of Ohio and Wheeler of Alabama have been quite industriously circulating a petition asking a caucus of the majority on the tariff bill. There is a growing feeling of opposition to the measure among the majority Representatives of industrial districts, irrespective of localities. But the indisposition to put this opposition into practical operation is shown in the inability of Messrs. Harter and Wheeler to obtain up to this time the requisite 20 names to compel the issue of such a call. It is admitted that if a caucus is held on the bill it will not be likely to get into the House for some time.

There have been some individual conferences with the chairman in hopes of securing an increase of rates for certain articles, but with the exception of certain items in the cotton, wool, silk, button, lumber and china provisions the customs part of the bill has thus far been allowed to stand.

In the metal schedule tin plate has been changed from 40 per cent. ad

Hosted by Google

valorem to 1⅛ cents a pound, to take effect October 1. Lead and lead products, one-half the present specific rates, instead of ad valorem. Lead sheets, 1¼ cents a pound, instead of 1 cent per pound. Black plate, $\frac{9}{10}$ cent a pound, instead of 35 per cent. ad valorem. Wire, from 30 to 35 per cent. ad valorem. Ferromanganese, 10 per cent., instead of 22½ per cent. ad valorem. Pocket knives and razors are also put at a uniform rate of 45 per cent. The great industries which have been reduced to such a ruinous scale of rates are to be forced to submit, notwithstanding a number of representative men or Representatives themselves in the House have striven to secure more favorable rates. Mr. Schmidt of York, Pa., one of the largest chain manufacturers in the country, had a conference with Chairman Wilson to-day and tried to show him that the rate fixed by the committee bill would be ruinous to that industry generally, but particularly on the smaller sizes. He urged the substitution of a graduated scale as in the existing law, and pointed out the operations of the present law in order to illustrate his meaning. The chairman gave him the stereotyped answer that if they begin to make changes there will be no end.

Representative Beltzhoover, one of the majority members of the House and who represents that district, went before the chairman himself and informed him that one-half the chains manufactured in the United States were made in his district and asked reconsideration of the rates on chains, but received no satisfaction.

Mr. Beltzhoover says that he has ascertained that the committee fixed those duties at the new rate without hearing anything on the subject from any source, without desiring to hear any, or without knowledge as to where chains were made and how many.

It is now two weeks since the bill was made public and the committee are still floundering about trying to devise means of making up from internal taxes what they cut down on customs. The loss of revenue from this source is put down at from $50,000,000 to $70,000,000. There is also a deficiency of $50,000,000. The damage to the revenue is from the free list. The lower customs will flood the country with foreign manufactures and produce revenue, but it will not do much for American industries and wage workers. The postponement of the time of the bill going into effect to June 1 has greatly demoralized those of the majority, who have had considerable correspondence with their constituents on the subject and were disposed to help them, except to vote for the bill, when it comes in the House, they doing all in their power to raise the rates in the committee of the whole where there is no tell tale recorded votes. Efforts are being made to effect a combination among the Representatives of the worst injured districts to mend the bill in Committee of the Whole. They will all vote for it in whatever shape it comes up for final action.

Later.—Secretary Carlisle, getting impatient over the delay in the completion of the tariff and revenue bill, visited the Capitol late this afternoon, and was some time in conference with the Ways and Means Committee. He has been holding his annual report to Congress, which should have been submitted at the opening of the session, in order to know what the committee intend to do in reference to making up from internal taxation what they take off on articles placed upon the free list. He is unable to complete his report by making certain recommendations until he can obtain that information.

The committee clerks are working on the changes in the bill which have already been announced, for the purpose of getting out a revised print. Things are in a great muddle and growing worse.

It was also developed to-day that the opposition to the bill is gaining ground. The petition which has been in circulation asking a caucus of the majority has, General Wheeler said this afternoon, over 50 names. Under the rule 20 are enough signatures to secure the call. If the names on the petition represent the strength of the majority determined to revise and amend the committee work it begins to look as if some of the worst features of the measure may be eliminated.

The friends of the Administration and the committee who represent either the free trade or the revenue element of the majority are antagonizing the caucus and will prevent one being called if they can.

Chairman Wilson said this afternoon that he still hoped to get the bill before the House this week, but if it would have to be submitted to a caucus he could see no prospect of it getting into the House before the Christmas recess, which will begin in about ten days.

The committee are having frequent surprises from industrial sources in showing up the incongruities of the ad valorem system which they have adopted and in many cases would be glad to get out of the dilemma if they could do so without a collapse of their whole scheme.

The ad valorem system was entered into by them by a sort of sneak process, from which they are now reaping a harvest of criticism and condemnation from all parts of the country. They adopted the ad valorem system by a simple clerical process of figures without knowing the market prices of the articles.

They kept their industrial *coup* very quiet in order to avoid a storm in advance, by giving out specific rates. The process by which they made out their ad valorem rates was simply on the percentage of reduction on the specific duties in the present law, without reference to where or how the result struck. Without mincing matters, the tariff revision bill turned out thus far by the majority of the Committee on Ways and Means is one of the most disreputable measures of the kind ever proposed for legislative action. There are some Representatives who are hinting at the probability of its defeat, but this is not likely, as it would require upward of 50 votes out of the majority to accomplish that result and that seems at present out of the range of reason.

Figuring made this week by a leading importing firm on foreign ore shows that with a rate of freight of 8 shillings, which is unusually low, Bessemer ore carrying 58 per cent. would cost to lay down 7.3 cents per unit. If the duty of 75 cents were taken off this would make the cost 6 cents per unit, or $3.48 per ton.

Joseph Wharton, founder of the Wharton School of Finance and Economy in the University of Pennsylvania, has recently given $75,000 to that school, supplementing a previous sum of $125,000 with which he originally endowed it.

Pig Iron Production Increases.

There has been quite a sharp increase in the current production of pig iron, and further additions to capacity are being made during the current month, Practically the additions to active capacity are confined to those plants which are connected with the rolling mills and steel works of the Central West, the adjustment of the wages question contributing thereto quite largely. In other sections, notably in the Chicago district, the resumption of some of the steel works must be telling on the stocks of raw material, thus bringing the interests in question nearer to starting their furnaces. On foundry grades the South shows some increase in production, to which further additions have been announced. This, however, is counterbalanced partly by stoppages in the Lehigh and Schuylkill valleys.

On December 1 the active furnace plant, grouped according to fuel used, possessed the following weekly capacity:

Fuel.		
Anthracite	32	16,188
Coke	72	78,241
Charcoal	26	4,950
Total, December 1	130	99,379
Total November 1	117	80,070
Increase	+13	+19,309

The weekly product of all the furnaces on December 1 compared as follows with that of preceding periods:

	Furnaces in blast.	Capacity per week. Gross tons.
December 1, 1893	130	99,379
November 1	117	80,070
October 1	114	73,895
September 1	125	83,434
August 1	169	107,042
July 1	220	153,782
June 1	244	174,029
May 1	251	181,551
April 1	255	178,858
March 1	255	176,978
February 1	251	171,201
January 1	246	173,068
December 1, 1892	240	176,271
November 1	244	171,082
October 1	226	158,027
September 1	236	151,648
August 1	238	155,136
July 1	254	169,151
June 1	269	173,674
May 1	268	177,886
April 1	280	185,462
March 1	305	193,902
February 1	308	187,383
January 1	305	188,082
December 1, 1891	298	188,135

The status of the anthracite furnaces was as follows:

Anthracite Furnaces, December 1.

Location of furnaces.	Total number of stacks.	Number in blast.	Capacity per week.	Number out of blast.	Capacity per week.
New York	18	2	1,150	16	5,519
New Jersey	11	3	1,656	8	3,150
Spiegel	3	2	142	1	118
Pennsylvania:					
Lehigh Valley	44	9	2,807	35	13,592
Spiegel	1	0	0	1	61
Schuylkill Valley	27	7	4,280	20	8,935
U. Susquehanna Valley	14	2	942	12	4,275
L. Susquehanna Valley	17	4	3,275	13	4,040
Lebanon Valley	15	3	1,906	12	5,470
Totals	150	32	16,188	118	44,829

Hosted by Google

For a number of months past our records of active anthracite furnaces show the following:

	Furnaces in blast.	Capacity per week
December 1, 1893	32	16,188
November 1	34	16,166
October 1	34	15,338
September 1	43	20,758
August 1	51	23,572
July 1	63	29,268
June 1	70	33,916
May 1	67	33,168
April 1	72	34,641
March 1	74	34,773
February 1	74	32,871
January 1	70	32,772
December 1, 1892	69	33,602
November 1	69	30,869
October 1	69	29,958
September 1	66	27,453
August 1	66	28,821
July 1	72	31,754
June 1	76	33,209
May 1	81	35,473
April 1	84	36,487
March 1	89	38,678
February 1	92	38,124
January 1	94	38,307
December 1, 1891	85	34,905

During November there were blown out Norristown and Temple in the Schuylkill Valley. One Crane and one Macungie in the Lehigh Valley were banked. The Pennsylvania Steel Company are running all four of their furnaces.

The status of the coke furnaces was as follows:

Coke Furnaces, December 1.

Location of furnaces.	Total number of stacks.	Number in blast.	Capacity per week.	Number out of blast.	Capacity per week.
New York	7	1	1347	6	3,900
Pennsylvania:					
Pittsburgh district	25	17	30,906	8	11,649
Spiegel	1	1	1,000	0	0

April 1	152	138,116
March 1	163	143,490
February 1	167	138,268
January 1	163	138,611
December 1, 1891	162	142,747

Among the large number of coke furnaces which have resumed is Niagara in New York, the second Monongahela, at Pittsburgh, Rosena and Stewart in the Sheaango Valley, two Cambria, at Johnstown, Riverside and Bellaire in the Wheeling district, Franklin and Emma in Central Ohio, and Haselton in the Mahoning Valley. Since the beginning of the month others have started and an additional number are preparing for early resumption.

In the South Allegheny has started in Virginia, and Dayton and No. 2 South Pittsburg in Tennessee are again in blast.

The status of the charcoal furnaces was as follows:

Charcoal Furnaces, December 1.

Location of furnaces.	Total number of stacks.	Number in blast.	Capacity per week.	Number out of blast.	Capacity per week.
New England	13	5	390	8	570
New York	5	1	90	4	475
Pennsylvania	13	2	156	11	761
Maryland	6	1	45	5	380

Texas	4	0	0	4	603
Washington	1	0	0	1	100
Oregon	1	1	225	0	0
Totals	118	26	4,950	92	14,154

As compared with previous months, the record of active charcoal furnaces stands as follows:

	Furnaces in blast.	Capacity per week.
December 1, 1893	26	4,950
November 1	26	5,084
October 1	28	5,496
September 1	28	5,700
August 1	34	5,563
July 1	35	7,224
June 1	34	8,034
May 1	38	8,595
April 1	38	8,729
March 1	36	8,623
February 1	37	8,934
January 1	38	8,865
December 1, 1892	41	9,509
November 1	42	9,540
October 1	39	9,174
September 1	42	9,657
August 1	41	8,331
July 1	42	9,964
June 1	48	11,613
May 1	40	10,100
April 1	44	10,859
March 1	50	11,734
February 1	49	10,991
January 1	48	11,164
December 1, 1891	52	11,033

Very few important changes have taken place with the charcoal furnaces.

Stocks.

The position of stocks, sold and unsold, as reported to us December 1, was as follows, the same furnaces being represented as in former months:

Stocks:	Sept. 1. Tons.	Oct. 1. Tons.	Nov 1. Tons.	Dec. 1. Tons.
Anthracite pig	115,930	121,597	134,157	134,475
Coke pig	513,260	532,157	503,806	485,292
Charcoal pig	197,881	199,008	200,450	199,220
Totals	827,071	852,762	838,413	818,987

During November the stock of coke pig iron was reduced by 18,514 tons, as compared with a decrease of 28,351 tons during October. Charcoal stocks have increased 1230 tons and anthracite stocks 318 tons, as compared with an increase of 1442 tons and 12,560 tons respectively during October.

MANUFACTURING.

Iron and Steel.

In the courts at Pittsburgh last week a bill was filed asking for the appointment of a receiver for the firm of Wm. Clark's Son & Co., proprietors of the Solar Iron & Steel Works in that city. The bill was filed by the attorneys for Elizabeth D. Clark, administratrix of the late Edward L. Clark, against Jane Clark. This litigation, in which a very large sum is involved, is based on the following statement as set forth in the application for the receivership: Edward L. Clark died April 25, 1893. In April, 1888, he and Jane Clark, the defendant, entered into partnership as the firm of William Clark's Son & Co., with a capital of $380,000, of which she possessed $224,000 and he $156,000. By an agreement she was relieved from any liability for losses of the firm, and in consideration of a guarantee of a profit of 10 per cent. per annum on her capital, or $22,400 per year, for five years, he was to operate the business, bear all the losses and receive all the profits. He conducted the business under this agreement until April 22, 1893, and paid the defendant the $22,400 per year agreed upon. At the time of his death he had accumulated net profits exceeding $268,000, of which he had on deposit in the bank $100,000 in the firm name of William Clark's Son & Co. The balance was in bills receivable, book accounts and other assets of the business. There were no debts owing. Since his death the defendant has assumed the right to manage the business as the surviving partner, and has appropriated to herself the entire assets, including the profits belonging to the deceased, and through agents is conducting the business for her own account and benefit, without the plaintiff's consent. The plaintiff asks for the dissolution of the partnership and that a receiver be appointed to take charge of the business and pay the balance due the estate of Edward L. Clark, also that the defendant be restrained from disposing of any of the effects of the partnership or interfering in any way in the business and especially with the accumulated profits belonging to Edward L. Clark. An accounting is also asked for.

The large plant of the Ætna-Standard Iron & Steel Company, at Bridgeport, Ohio, has not been in operation to full capacity at any time since last July. Last week at this plant there were ten sheet mills, two guide and one bar mill in operation, but how long these departments will continue running depends altogether on the receipt of orders For some time this firm have made it a practice to operate such parts of their works as they have orders for, and on the completion of specifications in hand close down their mills for further accumulation.

During the last three days of week before last the mills of the Brown-Bonnell Iron Company, Youngstown, Ohio, were on full time, except one puddle mill. On Monday, December 4, the entire plant was idle for inspection of boilers. On the following day eight finishing mills and three of the puddle mills were put in operation, but it is uncertain just how long these departments will continue running.

Mabel Furnace of Perkins & Co., Limited, Sharpsville, Pa., will probably go in blast about January 1 next. During the idleness of this furnace some repairs to equipment have been made which will increase the output to some extent. Spearman Furnace of the Spearman Iron Company, at Sharpsville, Pa., is again in operation, after an idleness of some months. Alice Furnace, at Sharpsville, Pa., operated by the Wheeler Iron Company of Sharon, Pa., has again resumed blast. Douglas Furnace, at Sharpsville, Pa., formerly operated by Pierce, Kelly & Co., has recently been closed down permanently. It is not probable that any additional idle stacks in the Shenango Valley, with the exception of those noted above, will be put in operation in the near future.

The steel plant of the Laughlin & Junction Steel Company, at Mingo Junction, Ohio was in full operation last week. For the past three or four months this plant has been operated to about half capacity, owing to the scarcity of orders.

Zanesville Furnace of the Ohio Iron Company, Zanesville, Ohio, was put in operation on Tuesday, the 5th inst. This furnace is 15½ x 75 feet in size and has an annual capacity of about 40,000 net tons.

The charter of the Diamond Steel Company, recently organized at Reading, Pa.,

Hosted by Google

with a capital of $50,000, was recorded in that city last week. Walter Steel, Edwin Sassaman, F. W. Hawman, Stanley S. Davis and Evan L. Shomo are the directors, and Samuel Y. Riegner the treasurer.

The Inland Steel Company of Chicago have completed their organization. J. E. Porter of Ottawa, Ill., is president, G. H. Jones, long connected with S. D. Kimbark, is vice-president and general manager, W. M. Adams is secretary and P. D. Block is treasurer. The office for the present is in Room 559 The Rookery. The company's plant at Chicago Heights was undertaken by the Chicago Steel Company, who failed last summer, but is now being completed by the new owners. They will manufacture agricultural specialties as well as steel angles, tees, channels and bars, for which they have a capacity of about 25,000 tons per annum.

The Fowler Foundry Company, Monadnock Block, Chicago, will shortly engage in the manufacture of steel castings, using for that purpose the steel plant at Stoney Island avenue and Ninety-fifth street, Chicago, which has been idle for some two years. They will make a high grade of castings from the alloys of iron, nickel, aluminum and other metals, for special use in refineries, mills, railroad, marine and electric work, for which they have peculiar facilities. Their specialty will be heavy pieces entering into the construction of dynamos. Special facilities are enjoyed at this plant for the manufacture of large castings. The president of the company is H. W. Fowler of the Fowler Rolling Mill Company, and Joseph Grave is secretary.

In the future the main office of the American Tube & Iron Company, with mills at Middletown, Pa., and Youngstown, Ohio, will be located at the first named place, the financial department and books having been removed from New York City. The change was made for the purpose of securing greater effectiveness and economy in the management of the business.

At the West Penn Steel Works of Jennings Brothers & Co., Limited, in Allegheny, Pa., the only department in operation is the bar mill and the length of time it will continue running is very uncertain.

The Cambria Iron Company, Johnstown, Pa., have called a special meeting of the stockholders to be held on January 16, 1894, to vote for or against increasing the capital stock of the company from $5,000,000 to $10,000,000; also for or against a proposed increase of the mortgage indebtedness to the amount of $2,500,000. It is reported that the object is to place the company under the new Pennsylvania Constitution, and that, while authority will thus be obtained to get increased capital by either increasing the stock or bonds, there is no present intention of a change, the authority being sought for future needs, and the method being left to the stockholders to determine whether capital shall be obtained by issuing more shares of stock or through a mortgage loan.

The Duluth Mfg. Company, Duluth, Minn., signed the Amalgamated Association scale last week.

The Warren Boiler Works, at Warren, Ohio, are building a new stack for the Thomas Furnace Company, at Niles, Ohio, which will measure 112 feet high and 11 feet in diameter.

The plant of the J. Painter & Sons Company of Pittsburgh, manufacturers of cotton ties, has recently been remodeled and a number of additions made, which will considerably increase their output.

The plant of the Locust Point Iron & Steel Company, at Locust Point, Md., has been sold to Mrs. Anna A. Coates for $25,000. The sale was made by virtue of decree of the Circuit Court of Baltimore. The property included the rolling mill and tin plate works, as well as considerable adjoining property.

The Alabama Rolling Mill Company, Birmingham, Ala., signed the Amalgamated Association scale on November 30, and the puddling department of their plant was started up on Monday the 4th inst. It is probable that the bar and guide mills will be started in a short time, if such has not already occurred.

During this week some good sized records in production of rails have been made at the Edgar Thomson Steel Works, Bessemer, Pa. It is probable this plant will continue in operation on rails until the holidays, at which time it is customary to close down for a week or two for annual repairs.

The Diamond Steel Company, recently organized at Reading, Pa., have elected the following officers: Penrose W. Hawman, president; Samuel Y. Riegner, secretary and treasurer, and Walter Steel, general manager. It is stated that the new concern have received quite a number of orders, sufficient to keep their plant in operation for some time.

It is stated that the Haselton Rolling Mills of the Andrews Brothers Company, at Haselton, Ohio, is the only establishment in the Mahoning Valley that is being operated to full capacity.

Work is not being pushed on the new plant of the Minneapolis Rolling Mills Company, at Columbia Heights, near Minneapolis. Operations are deferred until the times are more favorable for such enterprises. J. F. Conklin is president, O. C. Merriman vice-president and F. L. Langan secretary.

Denniston & Ryder of Janesville, Wis., are rebuilding their galvanizing works on a much larger scale.

People interested in charcoal iron will find something of interest in the remarkable record of the Hinkle Furnace, Ashland, Wis., for the past three years. That furnace blew in on December 28, 1890, and up to December 5 of this year had produced 106,000 tons on one hearth. By the end of the month it will have made over 110,000 tons, an average of 37,000 tons a year, or over 100 tons per day, taking account of the few days banked each year for slight repairs, &c. The product of Hinkle goes mainly to malleable foundries throughout the United States, and negotiations are on foot for exporting it to malleable works in England. The product is handled by Rogers, Brown & Co.

Following the general strike of last week the roughers and catchers at the Newport Rolling Mill Company, Newport, Ky., have scraped up cause for a strike among themselves. The strikers claim that the rollers under whom they work have reduced their wages 25 cents per day. The rollers claim this was necessary, as they themselves had been subjected to a cut of 10 per cent., and that a cut of 25 cents on their helpers only brought the wages down to the actual scale. The catchers and roughers finally accepted the cut and returned to work.

The Spicer Mfg. Company, New Philadelphia, Ohio, have recently placed in the plant of the New Philadelphia Iron & Steel Company a mechanical drag out, consisting of a train of rolls, 9 inches diameter, each roll being driven independently by a set of bevel gears. This drag out is in connection with the muck mill, by means of which the iron after being rolled to suitable sizes, and while it is still red hot, is conveyed by means of the roll train to the shear, is sheared to length and dropped on a carrier, conveying it through a cast iron tub 16 feet long, filled with water. After passing slowly through this tub it is delivered to a truck or car, sufficiently cooled to permit of its being handled. This device does away with six laborers formerly employed to do this work. The work was done under the supervision of T. D. Morgan, superintendent of the mill.

The sheet and puddling mills of the Cleveland Rolling Mill Company, Newburg, Ohio, which have been shut down since July 1, have started up. A reduction of 12 per cent. from the old scale went into effect.

It is announced that two of Cleveland's industries, the Lake Erie Iron Company, employing 600 men and the Britton Iron & Steel Company, employing 200 men, have shut down, without prospect of starting again in the near future.

Last week it was stated that the blast furnaces, steel works and every other industry in Bellaire, Ohio, were in operation.

The sale of the steel plant at West Superior, Wis., has again been postponed for one month, and is not set for January 2. It is stated that the reason for postponement was to give the Rockefellow syndicate an opportunity to investigate the workings of the Adams process of direct steel making, which will probably be introduced into the plant.

The property of the Birmingham Mining & Mfg. Company, at Birmingham, Ala., has been sold under a decree of the court for $163,915. A. W. Smith, trustee for the Birmingham Trust & Savings Company, and others were the purchasers.

A special dispatch from Tonawanda, N. Y., gives a highly colored account of a slight accident which occurred at the blast furnace plant of the Tonawanda Iron & Steel Company. As a matter of fact, the story of a "terrific explosion" emanated from the explosion of a tuyere at the cinder notch, throwing off a few sheets of corrugated iron from the roof over it and breaking a few panes of glass nearby. Aside from this no damage was done and nobody was hurt, and the furnace was running again as usual as soon as a new tuyere could be put in place and the dirt cleaned up.

The Greenfield Iron & Nails Works, Greenfield, Ind., will, it is stated, resume work in about a week.

The sheet mills of the Joliet Sheet Steel Rolling Mill Company, Joliet, Ill., remain idle. It is understood that it is the intention of the directors to lease the mill if suitable terms can be arranged.

The Glendale Rolling Mill of Jos. L. Bailey & Son, in Berks County, Pa., have resumed operations.

The Wheeler Furnace Company have decided to continue their Alice Furnace at Sharpsville, Pa., in operation. It was the intention to blow it out at an early date.

The Wabash Iron Company, Terre Haute, Ind., have decided to run their puddling mill on single turn with the object of aiding their employees to tide over the winter. The mill started on the 11th inst.

The announcement is officially made that the works of the Pennsylvania Steel Company will be closed from December 23 until February 1.

It is announced that the Dunbar Furnace, at Dunbar, Pa., will resume operations in a few days, after an idleness of two years.

The Burden Iron Company of Troy, N. Y., have made a reduction of 10 per cent. in the wages of their 1500 employees. This is said to be the first reduction in ten years at this plant.

The Troy Iron & Steel Company of Troy, N. Y., have started two furnaces on Breaker Island and the Bessemer plant.

The Akron Iron Company of Akron, Ohio, have gone into the hands of a receiver.

Rumors have been current for some time that one of the oldest and largest blast furnace companies in the Lehigh Valley is in trouble.

The Cumberland Nail & Iron Company, Bridgeton, N. J., have started up their pipe and rolling mills.

The E. & G. Brooke Iron Company, at Birdsboro, Pa., have, according to a press dispatch, closed down their rolling mill, nail factory and wire mill for an indefinite period.

The strike at the Norton Iron Company's works, at Ashland, Ky., has been declared off, the firm having acceded to the terms proposed by the men.

It is stated that the Valley Steel Company, capitalized at $450,000, an entirely new company, will be incorporated in Missouri to purchase the plant and business of the Belleville Steel Company, who failed in May last with liabilities amounting to about $750,000.

It is stated that the second Colebrook and one or both of the two Lebanon furnaces, now idle, will blow in during the next two weeks.

Machinery.

The large upright engine recently built by Wm. Tod & Co., Youngstown, Ohio, for the Brown, Bonnell Iron Company of that place, has been tested with satisfactory results. The engine will run the 10-inch department and is calculated to make 200 revolutions per minute.

The Fulton Truck & Foundry Company of Mansfield, Ohio, have been incorporated with a capital stock of $50,000, to manufacture street railway trucks, railway frogs and switches, electric railway equipment and do a general foundry business.

The Lloyd Booth Company of Youngstown, Ohio, note quite an improvement in orders and also in inquiries for machinery. This firm have sufficient contracts on hand to warrant moderate activity in their foundry and machine shops for some time to come.

At the regular meeting of the stockholders of the J. B. Sheriff Mfg. Company of Pittsburgh, held in that city recently, N. C. Davison was elected president, W. Gunning, vice-president, and Henry Tranter, secretary and treasurer. J. B. Sheriff has sold his entire interest in the above firm.

Hosted by Google

B. W. Payne & Sons of Elmira, N. Y., have shipped a 15 horse-power boiler to India, for a steam yacht to be used by C. A. Nichols, a missionary.

The Inman machine shops at Amsterdam, N. Y., are preparing to resume work full force and will probably start on full time January 1.

James P. Warren, 51 and 53 North Jefferson street, Chicago, has just built one of the largest exhaust steam heads thus far made in that city. It is intended for the electric plant of the Calumet Gas and Electric Light Company; will be used on a 20-inch pipe, and is 88 inches at its greatest diameter by 106 inches high.

William A. Jones, 57 and 59 South Jefferson street, Chicago, has just added to his foundry equipment the seventh machine for molding pulleys. The new machine will turn out a 60-inch pulley. Mr. Jones' enterprise presents a decided contrast to the timidity shown by numerous other manufacturers who need additional facilities, but are waiting for better times.

The destruction by fire of the Rome, N. Y., Locomotive & Machine Company's plant, on December 4, was a great loss to that city. The works were formerly the New York Locomotive Works, but when the present company bid them in for $150,000, subject to a like amount in mortgages, making the valuation of $300,000, the name was changed to the Rome Locomotive & Machine Company. Sixty-five men were employad. In the shops were two engines being repaired and almost ready for shipment. These the men succeeded in saving by getting them out. A new boiler in the blacksmith shop, almost completed, was destroyed with the building, which was two stories high and 225 x 70 feet. The boiler shop was 225 x 70, and the machine shop 270 x 80 feet, and both were burned. Aside from numerous small sheds all that is left is the building containing the main offices, the molding room and the finishing department, all being valued at about $50,000. The buildings were all of brick. The one saved contains all the private offices and patterns made since the construction of the works about 12 or 14 years ago. The company carried about $200,000 insurance, which will not cover the loss within $50,000. The principal business was to repair and rebuild locomotives and manufacture gas tanks used in railroad coaches. President Thomas H. Stryker of the company is favorable to the idea of rebuilding the works, and will lay the matter before the directors at an early date. The fire is supposed to have been incendiary.

The Vilter Mfg. Company of Milwaukee, who made an assignment in the latter part of August, have made a settlement with their creditors and will resume business as soon as the assignee is discharged by the court, which will probably be in the early part of next week. The settlement is made on the basis of 100 cents on the dollar, but the creditors have given an extension of time covering three years and the Board of Directors of the company has been strengthened by the taking in of several of the largest creditors. When the company suspended the liabilities were $205,297.06 and the assets $877,060.28.

Turner, Dickinson & Co. of Chicago have settled with their creditors and discharged their assignee. They are building a new foundry at the suburb of Cragin, on the St. Paul Railroad, to secure greater facilities, but will continue to finish the castings in their machine shop at Churchill street and Hoyne avenue.

The machine shops of the Baltimore & Ohio Railroad, at Garrett, Md., which have been almost entirely closed for about four months, have again resumed operations to nearly full capacity, giving employment to a large force of men.

The Bovaird & Seyfang Mfg. Company, extensive manufacturers of oil well supplies, with headquarters at Pittsburgh, have gone into the hands of receivers, the application being made at Bradford, Pa., last week. T. H. Kennedy and J. P. Cochran of Bradford, large stockholders, have been appointed receivers. The concern are capitalized at $500,000 and have manufactories in Bradford and Pittsburgh and warehouses at a number of places in the oil regions. It is said that the embarrassment of the firm is due to inability to make collections, and also to the fact that their manufactures have been sold at prices equal to cost, and in many cases below cost, for some time. If opportunity is given to realize on assets, it is believed by those who are familiar with the affairs of the concern that the creditors will be paid in full.

The works of Pedrick & Ayer, Philadelphia, manufacturers of machine tools, are now running ten hours a day, under the management of the assignee. It is stated that a new company is being formed for the purpose of taking over the business of the late firm, and that Mr. Pedrick will be one of the largest shareholders.

Gove & Higgins, Norwalk, Ohio, have suffered a loss of about $8000 by the burning of their foundry.

The Berlin Iron Bridge Company, East Berlin, Conn., have announced a reduction in wages.

Charles Place, machinery commission merchant, doing business under the name of the New York Machinery Depot, in Frankfort street, New York, has made an assignment. He started the business in 1886, and is said to have lost a considerable amount of money by the failure of a Jersey City iron works.

Over 70 men were laid off in one week recently at the A. A. Griffing Iron Works, Jersey City, N. J. A still further reduction in force is anticipated

Frick Company, manufacturers of machinery, steam engines, boilers and ice-making and refrigerating machines, at Waynesboro, Pa., are operating their plant a portion of the time only, with about one-seventh of their usual force, or 100 men out of 700. The manufacturers of that section have felt severely the effects of the hard times and have yet to see signs of immediate improvement.

Dupont Mfg. Company, St. Johnsbury, Vt., builders of improved power hammers, have recently shipped machines to several hardware and carriage manufacturers. One of the strong points claimed for these hammers is economy in the use of power, which has been particularly noticeable when electric motors are used, the motors showing a low consumption of power.

The boiler shop of Deppe Brothers, at St. Louis, Mo., has been completely destroyed by fire. The structure was 100 x 160 feet in size and was valued at $7000, including contents.

John Trix has broken ground at Detroit, Mich., for a new brass foundry to cost $10,000.

The Fulton Truck & Foundry Company have been incorporated, with a capital stock of $80,000, to carry on business at Mansfield, Ohio.

The Whitin Machine Company of Whitinsville, Mass., have started their works on full time, but have reduced the wages of their employees.

Morse, Williams & Co. of Philadelphia have purchased a site adjacent to their works, and are erecting a one-story brick building for the accommodation of their hydraulic department, their present quarters being inadequate. They are meeting with a good demand for their direct electric passenger elevator, and among recent installations have been the following: In Philadelphia, Lit Bros.', new dry goods store, Eighth and Market streets; Evans' drug store, Eleventh and Chestnut streets, and Ivins, Dietz & Magee's new building (freight elevator also), Twelfth and Market streets. In New York, the Frederick Ayer Building, 79 Franklin street; John F. Dillon's building, 671 Madison avenue; David Hepburn's building, 54–56 Stone street, and Chas. Lesinsky's building, 45 Vesey street; the Price Building, Scranton, Pa.; Kline & Eppihiemer's dry goods store, Reading, Pa., and the Carlman & Ribsan office building, Trenton, N. Y. Among work now under way are orders from the Babcock & Wilcox Company, and G. L. Lawrence, New York; Nashville, Tenn., for the Masonic Building there; Richmond, Va., and Portland, Ore.

The Barr Pumping Engine Company of Philadelphia are engaged in the construction of four vertical steam pumps, each having a capacity of 5,000,000 gallons, for the city of Cincinnati. Among recent orders taken by the company is one for a compound condenser pump of 2,000,000 gallons capacity for the West Chester Water Works, West Chester, Pa.

Hardware.

Buck Bros., Millbury, Mass., who have for some time been running four and one-half days a week are now running five and one-half days a week.

The employees of the Clinton Wire Cloth Company, Clinton, Mass., will soon suffer a reduction in wages of from 3 to 20 per cent.

The plant of the Marlin Arms Company, New Haven, Conn., will for the present run only eight hours per day.

H. C. & W. S. Cloe and L. E. Ford & Co., manufacturers of tacks, Kingston, Mass, are again running their factories, but only half the usual number of machines are in operation. They hope to run on full time with their full number of machines within a few weeks.

The employees at the plant of Richardson Bros., Newark, N. J., operated by the National Saw Company, have been notified of a reduction of about 10 per cent. in their wages.

The nail mill of the Laughlin Nail Company, Martin's Ferry, Ohio, which has been shut down for several weeks, on account of inability to make shipments during the low water in the river, resumed in full on the 7th inst., giving employment to 800 men.

The Dulancy Nut Lock Company have been incorporated at Rice Lake, Wis., with a capital of $100,000. The incorporators are J. G. Dulancy, W. H. Bundy and A. L. Ulrich.

Romer & Co., manufacturers of padlocks and latches, at Newark, N. J., are very busy filling orders with their full force of hands. This house, though old in years—having long since passed the half-century mark—are youthful in vigor and enterprise, and are constantly adding new and desirable features to their catalogue.

The Chicago Horseshoe Company, 908 Ashland Block, Chicago, have completed the improvements in their works at East Chicago, Ind., and are now placing their shoes on the market. The company have their own rolling mills and roll their own bars.

The Miller Bros. Cutlery Company, Meriden, Conn., have notified their employees that if the duty on pocket cutlery as embodied in the Wilson bill becomes a law it will be necessary to reduce wages from 40 to 50 per cent. No deductions in wages will be made this month, but it is announced that if the company start up after January 1 they will probably reduce wages not less than 25 per cent. If the bill finally passes in its present form still further reductions may be expected. The company state that they will use every means to have the schedule amended favorably and give their employees the benefit of it. The above statement is made thus early that any of their operatives who desire may have ample opportunity for seeking work for next year in better favored occupations.

After a long shut down the spring and axle works of Wood, Smith & Co., Fort Plain, N. Y., have resumed operations in full.

The works of the H. M. Myers Company, at Beaver Falls, Pa., which have been idle for some months, resumed operations in part last week. In accordance with notice given some time before operations were resumed, the employees who applied for work agreed to accept a slight reduction in salary. The firm were compelled to refuse positions to many, owing to the fact that there were so many applications made and on account of starting up only a portion of their plant.

Last week the report of W. C. Hine, receiver of the Youngstown Stamping Company, Youngstown, Ohio, was filed in court. The report shows that from February, 1893, to May, 1893, $12,911 was received and $12,335.28 paid out; in May $20,263.78 was received and $19,966.09 paid out; in June $11,983.65 was received and $12,377.70 paid out; in July $7402.77 was received and $7588.14 paid out; in August $7943.65 was received and $7039.34 paid out; in September $7402.88 was received and $7721.32 paid out. This leaves balance on hand, October 31, $889.11.

The Columbia Gray Iron Company, Columbia, Pa., having their New York office at 35 Warren street, in charge of O. N. Stein, report a fair business and are running on full time.

W. F. Pardee, salesman for Frazer & Jones Company, manufacturers of saddlery hardware at Syracuse, N. Y., visited our Chicago office last week on his return home from a four weeks' trip through Iowa, Nebraska, Minnesota and Wisconsin. He reported an excellent trade, considering the condition of business for the past six months.

Hosted by Google

His largest business was secured in Iowa and Nebraska, where he found stocks completely exhausted in jobbers', dealers' and consumers' hands. It is a pleasure to note such experiences in the midst of the general complaints of extreme dullness.

New York Wire Cloth Company, New York office 280 Broadway, have about completed additions to their York, Pa., works, made necessary by the total destruction of one of their factories, at Hamilton, N. Y., June 2, last. The machinery is of the newest models and most improved kind, and in operation will double the capacity of that plant. They estimate that, based on ten hours each for 300 working days, they will be able to produce 25,000,000 square feet of wire cloth per year.

In our issue November 30 we stated that the handle finishers employed by the Goodell Company, Antrim, N. H., had refused a reduction in wages and went on strike. This statement was not, however, accurate, the facts being that when the reduction in wages was announced only eight of the 25 handle finishers remained away from work, all of them for one day, and a part of them for a few days longer, in order to inquire into the situation. One out of the eight left town, and the balance all went to work a few days later. There had been no organization and nothing that could reasonably or properly be called a strike.

Niagara Silver Company, Niagara Falls, N. Y., have for some time been engaged in manufacturing sterling silver souvenir spoons. Several months since they took possession of their large new factory erected in the early part of this year and thoroughly equipped with modern machinery and appliances for manufacturing sterling silver and various grades of plated and unplated flat ware. W. A. Jameson is the manager of the concern.

The Shelby Steel Tube Company, Shelby, Ohio, have not only thoroughly established themselves in the United States, but they are also selling their goods in Nova Scotia, New Brunswick and Canada, and receiving inquiries from England and Australia. This demand is due to their process, by which they claim they are enabled to draw lighter gauges and finer qualities than their foreign competitors have thus far been able to produce. Last year they state that they sold nearly their entire output to American manufacturers, and could have disposed of more had they been in a position to produce the same. They have, however, increased their facilities so that they are now able to supply more than is required in America. Among the company's patrons are many of the bicycle manufacturers of the United States and some in Canada. They advise us that they have, of course, to contend with the prejudice respecting this as well as other innovations by American manufacturers, but they state that this feature of the trade is disappearing rapidly.

Sargent & Co., New Haven, Conn., began on the 4th inst. to work six days a week, eight hours a day. During the past two months the company, who employ over 2000 persons, have been gradually increasing the number of hours of work, so that now the factory is running only one hour a day less than the usual winter schedule.

The Canastota Knife Company, manufacturers of fine pocket cutlery, Canastota, N. Y., are running six hours per day.

Miscellaneous.

The Shultz Belting Company, St. Louis, are having a fair trade. Among the recent export orders entered on their books they mention one of 5200 feet of different width belting to be shipped to London, England. They sent a large shipment to a point in Russia some time since, and have received a letter from the firm using the belting stating it was satisfactory.

The Northwestern Car & Machine Company of Oshkosh, Wis., passed into the hands of a receiver on the 21st inst. Serious allegations are made against the promotors of this company. Representations were made by them last spring that heavy Eastern railroad capitalists were looking for a location for the establishment of the largest car works in the country. They asked about 25 acres of land and $25,000 in cash to locate works in which several hundred thousand dollars were to be expended. The bonus was not to be called for until the works were actually turning out ten complete cars a day. Wooden buildings were put up with paper roofs, and a large lot of machinery was put in, but before the works were ready to run they called for their money, which the citizens refused to pay. Liens had been filed on about all the property and a chattel mortgage on the machinery. Several suits are already pending by the creditors. J. L. Brown of Montreal, one of the company, seems to have advanced $3600 on unsatisfied judgments. The following additional claims were also filed: Niles Tool Company, Chicago, $22,000; the Fay & Egan Company, Cincinnati, $18,000; W D. Allen, Chicago, $1200; Burtis & Howard, Minneapolis, $13,000; E. P Allis, Milwaukee, $8000, and various Oshkosh parties several thousand more. There are possibly other outside claims. It is probable that more or less litigation may grow out of the complication.

Among recently authorized corporations in Illinois are the following: National Ventilating Company, Chicago; capital stock, $100,000; incorporators, Carlos B. Sawyer, O. H. McConaughey and A. A. Barrett. Whitacre Air Brake Company, East St. Louis; to manufacture air brakes; capital stock, $500,000; incorporators, William C. Whitacre, John F. Baumgarner, Shepard Knapp. Stephenson Mattress Machine Company, Chicago; capital stock, $100,000; incorporators, Edwin Stephenson, John E. Anderson and John H. Whipple. Sterling Metal Company, Chicago; capital stock, $30,000; incorporators, Fred. W. Cook, W. W. Griggs and H. B. Moronas.

The firm of Marlin & Co., Allegheny, Pa., manufacturers of water conductors, eave troughs, metallic skylights and galvanized iron cornices, have been succeeded by the firm of Marlin & Co., Incorporated, the change going into effect on Friday, December 1.

The Baldwin Locomotive Works, Philadelphia, Pa., have received an order for 71 locomotives for the Atchison, Topeka & Santa Fé Railroad; 42 are to be constructed immediately and the remainder before the close of the year 1894.

Owing to lack of orders and general dullness in railroad business, the Wason Mfg. Company's car shops at Brightwood, Mass., have closed for an indefinite period. About 250 employees were laid off, only a few being retained to complete orders now under way.

The Lebanon Mfg. Company, Lebanon, Pa., have announced a cut in wages in all departments, varying from 6 to 10 per cent. Over 200 men are affected.

The plant, machinery and stock of the Vienna Enamel & Stamping Company, at Porter, Ind., have been sold by Receiver Eckels to Gustav Wilke of Chicago, for $38,000. It is said that the purchaser represents a new organization who will put the plant in operation at once.

A considerable reduction has been made in the working force of the Bath Iron Works, Bath, Maine.

The Erie Car Works property, at Erie, Pa., has been leased by the Lake Shore Railroad Company, and the plant started with a force of 75 men, which will shortly be increased to 200.

A number of men have been put at work in the malleable iron department of the Walter A. Wood agricultural implement plant, at Hoosick Falls, N. Y., and it is expected that the force will be gradually increased.

Witherbee, Sherman & Co. of Port Henry, N. Y., have begun the operation of two of their mines on full time, to be continued during the winter, by reducing the wages of their employees to $1 for pit hands and 91 cents for bank men.

The brick work is completed for a plow factory at Superior, Neb.

Ground has been broken for the erection of the buildings of the Litchfield Car Works, at Memphis, Tenn. The work is prosecuted under the care of Superintendent J. M. Maris. One of the leading officers of the company says they will erect a great deal of new machinery at Memphis. Besides using the material that has done service in the shops at Litchfield, the plant will be improved by the use of machinery of the latest patterns. This machinery has been purchased and is awaiting orders to ship to Memphis. He also says that within four months the company will be manufacturing cars in Memphis. The new plant will be called the Memphis Car & Foundry Works.

Henry W. Dunlop, Charles L. Dunlop and John C. Post have filed articles of incorporation of the Orvis Steel Arch Furnace Company, at Milwaukee, with a capital stock of $50,000. The purpose is to manufacture and sell the Orvis patent furnace in Wisconsin.

P. H. Halpin, receiver for the Dubuque Brass & Metal Works, at Dubuque, Iowa, has filed his report. It shows that the total liabilities of the company are $66,499.83, while all that was realized from the sale of the works, &c., was about $30,000. If a general division of the proceeds were ordered the creditors would receive considerably less than 50 cents on the dollar. The works were sold for $15,000.

The Steel Brick Siding Company, Fulton, Ill., are adding new machinery to their plant and making numerous improvements. The company will soon place on the market a line of new specialties in steel roofing, siding and ceilings.

The Standard Wheel Company are increasing the number of employees in their works at West Indianapolis, and have started up their branch plants at Terre Haute and Kalamazoo. If business continues to improve they will put in operation their branch plants at Fort Wayne and Sandusky.

The Moline Malleable Iron Works, at St. Charles, Ill., have begun operations with a force of 20 men. They were formerly located at Moline, but removed to St. Charles after the foundry was burned. The plant has but recently been completed.

Among recently authorized corporations in Illinois are the following: Anderson Coke, Gas, Power & Reduction Company, Chicago; capital stock. $10,000,000; incorporators, James C. Anderson, Frank J. Smith and James B. Gascoigne. Shailer & Shniglau Company, Chicago; general engineering and contracting business; capital stock, $125,000; incorporators, Robert A. Shailer, Charles R. Shniglau and Robert P. Lamont. George W. Pitkin Company, Chicago; to manufacture paints; capital stock, $50,000; incorporators, George W. Pitkin, Walter A. Mayo and Roger S. Pitkin. The Chapman & Davison Company, Chicago; to manufacture tools and machinery for the use of confectioners, grocers and bakers; capital stock, $25,000; incorporators, Mark J. Chapman, John C. Davison and Matthew J. Chapman. Duplex Smokeless Furnace Company of Illinois, at Chicago; capital stock, $25,000; incorporators, Edward W. Cullen, C. A. Murray and T R. Sylvanus. Griffin Wheel Company, Chicago; to manufacture car wheels; capital stock, $1,000,000; incorporators, Thomas A. Griffin, Gardner G. Willard and William W. Evans.

The Ten Mile Coal & Coke Company of Clarksburg, W. Va., have been granted a charter of incorporation, with a capital of $1,000,000. This concern purchased about a month ago 2800 acres of coal lands on Ten Mile Creek, which they propose to develop. T. Moore Jackson is prominently identified with the company.

The plant of the Niagara Machine Company, at Kensington, N. Y., which has been closed some time, has resumed operations under a new management. The company manufactured steel balls, pedals, bearing cases and other cycle fittings. Thomas H. Spaulding of Orange, N. J., is now proprietor. One hundred and fifty men are employed. Wm. H. Crosby, formerly secretary and treasurer of the old company, is manager. Associated with him are Wm. H. Hill and Theodore J. Tellefsen, the latter being superintendent. Both were connected with the old company.

The F. J. McCain Company, 439 The Rookery, Chicago, have purchased a piece of ground at West Twentieth street and the Panhandle Railroad, Chicago, on which they intend to erect a plant for fitting structural work. The company are general contractors.

The Thompson Belting Company are installing the machinery in their new plant at Harvey, Ill., and will shortly be in position to manufacture leather belts. This factory is a recent acquisition for Harvey.

The assignees of the Grant Locomotive Works, at Chicago, will receive until January 15, 1894, sealed proposals for the purchase of the entire property of the company now in their hands. The office of the assignee is at 100 Washington street, Chicago.

The Anniston Pipe Works, Anniston, Ala., have been sold to a syndicate representing the bondholders, and will be put in operation at an early date.

Hosted by Google

TRADE REPORT

The heavy increase in the production of Pig Iron shown by our monthly statistics and the known fact that since the beginning of the month there have been further additions to capacity simply emphasize the growing supremacy of the Central West. The increase in question is due almost entirely to the resumption of plants connected with rolling mills and Steel works, who are capturing nearly every order of consequence from the Atlantic Ocean to the Mississippi. In their fierce struggle for business they are making prices that even two months since would have been thought impossible. Even with the lowest basis for raw material the figures accepted for finished material, apparently without hesitation or keen regret, by the Pittsburgh and the surrounding districts leave rival producers unable to account for them. Low as they are, our quotations in the leading markets are nominal. All important business is done at material concessions.

If there were any evidence that the low sellers are filling up there might be some hope for the near future, but thus far there is no indication that any of the hungry giants are even temporarily gorged. One by one the weaker mills are withdrawing to await better times.

In Steel Rail circles the only incident has been the announcement that the Pennsylvania Railroad has placed an order for 43,000 tons. At other times the purchasing by this road has been very significant, because many smaller roads followed its leadership. This year little is expected in this direction.

For nearly a month it has been persistently reported that Steel Billets had been sold under $17 at Pittsburgh. We know of at least one case in which it was unquestionably done. Now, however, $16.75 is an open quotation, and buyers claim that they can do even better.

There has been some recent breaking in prices lately in the Cast Iron Pipe trade, the Jersey City contract for about 2500 tons going at $19.50 ℔ ton, delivered, while the Washington business was also taken at very low prices. One of the leading authorities in the trade does not take a cheerful view of the future, fearing even greater demoralization.

Chicago.

(By Telegraph.)

Office of *The Iron Age*, 59 Dearborn street, CHICAGO, December 13, 1893.

At this time of the year not much business is expected in Iron and Steel and sellers are not being disappointed in the prevalence of the usual conditions. There is, however, a lack of the hopefulness with which better trade is ordinarily looked for after the turn of the year. The general expectation is that dullness may continue for some time, or until there is some definite action toward settling the tariff agitation.

Pig Iron.—Local Coke is moving rather steadily in small lots for quick delivery, but there is almost no inclination among buyers to place contracts for future delivery. Some figuring is being done, but it is simply owing to consumers keeping themselves posted. Stocks at local furnaces will last for a month or two more at the present rate of shipment, so that there is no immediate prospect of additional furnaces being blown in in this vicinity. Some few sales have been made of Southern Coke, but trade generally has been extremely dull, and even the carload business has dropped to very small proportions. The leading companies are maintaing prices at the rates named last week, but some of their competitors are taking business at lower figures. A sale of about 1000 tons of Lake Superior Charcoal Iron was made to a malleable concern for early delivery at a good price, but the inquiry generally for Charcoal Iron has been quite light. Quotations are now as follows for cash:

Lake Superior Charcoal	$15.50 @ $16.00
Local Coke Foundry, No. 1	13.50 @ 14.00
Local Coke Foundry, No. 2	12.75 @ 13.00
Local Coke Foundry, No. 3	12.25 @ 12.75
Local Scotch	14.00 @ 14.50
Ohio Strong Softeners No. 1	15.50 @ 16.00
Southern Silvery, No. 1	@ 13.75
Southern Silvery, No. 2	@ 13.25
Southern Coke, No. 2	12.15 @ 12.40
Southern Coke, No. 3	11.65 @ 11.90
Southern, No. 1, Soft	12.40 @ 12.65
Southern, No. 2, Soft	11.65 @ 11.90
Tennessee Charcoal, No. 1	16.00 @ 16.50
Southern Gray Forge	10.60 @ 10.85
Alabama Car Wheel	18.25 @ 18.50
Jackson County Silvery	16.00 @ 16.50
Other Ohio Silvery	15.00 @ 15.50

Bars.—The general demand for Bars has been lighter, although the car business is looking up considerably. Contracts have been placed recently for over 1000 cars by a few railroads and more orders are in sight, aggregating several thousand. The Pullman works have secured a large part of the orders thus far placed, while some have gone to Detroit. A revival of the demand for Car Iron will put the Bar mills in decidedly better shape, as business has been needed for their large trade. Manufacturers' agents note a better movement in specifications on season contracts the past week, as compared with previous weeks. Prices on new business are weak, although nominal quotations on mill shipments continue to be from 1.35¢ to 1.40¢, Chicago, half extras, on Bar Iron, and 1.40¢ to 1.45¢ on Soft Steel Bars. The tendency to use Steel steadily increases, and as more mills enter the market with Steel Bars the price is approaching more closely to that of Bar Iron. The demand for small lots from stock is less active than it has been, but nominal prices are unchanged at 1.60¢ @ 1.70¢ for Bar Iron and 1.65¢ @ 1.75¢ for Soft Steel Bars.

Structural Material.—The largest contract recently placed here for Building Shapes comprised about 200 tons for a ten-story apartment house. A brewing company will shortly make an addition to their plant which will require a considerable tonnage of Beams and other Shapes. Outside of the city prospects are somewhat better, as several large building projects have come forward at Milwaukee, St. Paul, Minneapolis, Denver and other points. The Milwaukee Viaduct hangs fire and there is a possibility that it will be readvertised. Quotations are as follows, Chicago delivery: Beams, 1.65¢ @ 1.75¢; Tees, 1.90¢ @ 2¢; Angles and Universal Plates, 1.60¢ @ 1.65¢. Small lots are sold from stock at an advance of 10¢ @ 15¢ ℔ 100 above these prices.

Merchant Steel.—Further buying is reported by implement works, but it is noticeable that these late buyers have cut their requirements considerably below the quantity they took last year. Conservatism is apparent in the agricultural implement line as well as in other branches of industry. Mill shipments, Chicago delivery, are quoted as follows: Smooth Finished Machinery, Tire and Open Hearth Spring Steel, 1.90¢ @ 2¢; Ordinary Bessemer Machinery, 1 60¢ @ 1.65¢; Ordinary Bessemer Tire, 1 55¢ @ 1.60¢; Ordinary Tool Steel, 6¢ @ 7¢; Specials, 12¢ and upward.

Billets.—No new business is reported, and quotations are continued at $19.25 @ $19 50, Joliet.

Plates.—Nothing is doing of any moment in mill business, but sales from stock are a little better than they have been, and the outlook is a trifle better from that standpoint. Mill shipments, Chicago delivery, are quoted as follows: Tank Steel, 1.60¢ @ 1.70¢; Shell Steel, 1.80¢ @ 1.90¢; Flange Steel, 2¢ @ 2.10¢; Fire Box, 2.75¢ @ 5¢. Store prices now prevail as follows: Iron or Steel Sheets, Nos. 10 to 14, 2¢ @ 2.10¢; Tank Steel, 1.90¢ @ 2¢; Shell Steel, 2 20¢ @ 2.40¢; Flange Steel, 2 50¢ @ 2.65¢; Boiler Tubes, 70 and 5 % off.

Sheets.—Black Sheets are weak under continued pressure to sell, but consumers are not inclined to take hold during this month and will wait until January or later to cover their requirements. Quotations are continued at 2.65¢ @ 2.70¢, Chicago, for mill shipments of No. 27 Common, while small lots from stock are selling at 2 90¢ @ 3¢ The demand for Galvanized Iron is by no means so good as in November and prices are drooping. The general quotation on Juniata is 70 and 10 and 10 % for mill shipments. Small lots from stock are selling at 70 and 5 % @ 70 and 10 %. Copper Sheets are fairly firm at 25 % @ 30 % off, according to quantity.

Rails and Track Supplies.—The Pennsylvania Railroad order for 7000 tons is the only business reported here in Steel Rails, except a few carload lots. The Western roads have not yet begun to place their contracts for next year. Quotations are $25 @ $27 for Steel Rails, 1.55¢ @ 1.60¢ for Splice Bars; 2.55¢ @ 2 60¢ for Track Bolts with Hexagon Nuts, and 1.90¢ @ 1.95¢ for Spikes.

Old Rails and Car Wheels.—Old Iron Rails are weaker. A considerable quantity has been sold at $12 on the railroad line, but sufficiently near to affect the Chicago market. Old Steel Rails are very quiet. The best offer for short lengths is $7.25, but sellers ask $7.75. Long lengths are neglected, while nominally quoted at $10. Only speculative interest is taken in Old Car Wheels, for which $11 is offered in quantities.

Hosted by Google

Scrap.—Business continues in about the same condition as before with the exception of a little better inquiry for Mill Scrap and consequently an advance in the view of dealers as to the value of Wrought grades. Quotations are as follows: No. 1 Forge, $11; No. 1 Mill, $8.25 @ $8 50; Sheet Iron, $4.50; Pipes and Flues, $8; Axles, $16; Horseshoes, $11; Fish Plates, $12; Spikes and Bolts, $10; Cast Borings, $4.50; Wrought Turnings, $6.50; Axle Turnings, $8; Heavy Cast, $9 50; Stove Plate, $7.75; Malleable Cast, $8; Mixed Steel, $7, gross ton; Leaf Steel, $14 50.

Metals.—Copper is very firm, but quotations are continued at 11¢ for carload lots of Lake and 10¢ for casting Copper. Spelter is dull, with producers trying to get 3.60¢, but consumers are not even bidding 3.55¢. Pig Lead has declined to 3.10¢, but refiners are unable to secure orders at the reduction.

W. C. Hayward, who has for several years represented Matthew Addy & Co. of Cincinnati, has opened an office on his own account in Room 53 The Rookery, Chicago, as general broker in Pig Iron and Old Material. Particular attention will be paid to Southern Pig Iron, with which he is thoroughly familiar as to brands and qualities. Mr. Hayward has had much experience as a Pig Iron salesman, and is well and favorably known throughout the trade.

H. A. Keith, widely known in the foundry trade of the Northwest, has engaged as general manager of the East Chicago Foundry Company, East Chicago, Ind. The business office of the company is in Room 716 The Rookery, Chicago. Repairs and improvements are now being made and the plant will be put in operation on or about January 1. The company will make a specialty of dry sand rolls and mixtures to meet definite requirements. This is one of the largest among the local foundries and is well equipped for any class of work.

St. Louis.

(*By Telegraph.*)

Office of *The Iron Age*,
Bank of Commerce Building,
St. Louis, December 13, 1893.

Pig Iron.—The market does not show any change. The local demand runs largely to carload orders and prices are unchanged, as follows, for cash, f.o.b. cars St. Louis:

Southern Coke, No. 1 Foundry	$13.25 @ $13.50
Southern Coke, No. 2 Foundry	11.50 @ 11.75
Southern Coke, No. 3 Foundry	10.75 @ 11.00
Southern Gray Forge	10.25 @ 11.50
Southern Car Wheel	17.25 @ 18.25
Lake Superior Car Wheel	16.50 @ 17.00
Ohio Softeners	16.00 @ 16.50

Bar Iron.—A fair trade is reported from mill, but jobbers are not doing much. Prices are weak; mills quote 1.40¢ @ 1.45¢ for carload quantities, half extras, f.o.b. cars St. Louis. Jobbers ask 1.70¢ @ 1.75¢.

Barb Wire.—The demand shows a falling off and prices, while unchanged, are inclined to weakness. Painted is quoted at $2 in carload lots to jobbers, but this price would doubtless be shaded somewhat. Jobbers ask $2.10 for Painted and $2.50 for Galvanized.

Wire Nails.—There is a good trade in Wire Nails, occasioned more or less by the low prices prevailing. Sales are reported at $1.35 in large lots from mill. Store price is $1.50 @ $1.55.

Rails and Track Supplies.—There is no change to note in this department, except that prices are a trifle lower. We quote as follows: Splice Bars, 1.65¢ @ 1.70¢; Spikes, 1.95¢ @ 2¢; Bolts, Square Nuts, 2.40¢; with Hexagon Nuts, 2 50¢; Links and Pins, 1.85¢ @ 1.90¢; Old Rails, $13.50; Steel Rails, $26.50. @ $27.

Pig Lead.—This metal is in an unsettled condition and price is hard to quote. Buyers bid 3¢ @ 3.05¢, but sellers ask 3.10¢ @ 3.15¢ As the result there is nothing doing except occasionally a carload or two changes hands.

Spelter.—A fair demand is reported for Spelter at 3.50¢, which price is also quoted for January delivery. Choice brands command 3.60¢.

Adolph Butze, St. Louis, Mo., has been appointed sole agent in St. Louis and the territory tributary to it for the sale of locomotive tires made by the La trobe Steel Works, Philadelphia, Pa.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St.,
PHILADELPHIA, Pa., December 12, 1893.

The situation in Iron and Steel is practically the same as during the past several weeks. Prices are no better, the demand is no larger, competition is no less severe, neither is the outlook any more settled than it has been since the summer months. There are some indications which might develop improvement, providing that business rested on its merits, but considering the season of the year, and the uncertainty in regard to the tariff, it is not likely that much progress will be made in the direction of greater activity. Nevertheless, there is a growing conviction that prices have reached their lowest, and that on the first signs of a volume of increasing business values will begin to harden. Six months of severe retrenchment is uncovering a great many bare spots, so that purchasing is, in many cases, not a matter of choice, but of necessity, hence it is almost as difficult to postpone business as it is to induce heavy purchases. What is wanted is wanted badly, but beyond that holders find it useless trying to force business. A position of this kind has its compensations as well as its disadvantages, inasmuch as a great many small lots must be taken, even if there is no demand for large quantities. The trade are therefore beginning to feel that there can hardly be anything less favorable in store for them, while there is plenty of room in the opposite direction, so that improvement is only a question of time.

Pig Iron.—The market is extremely dull, and while there are no evidences of large offerings, such demand as there is can be readily met at former quotations. The talk of an advance is certainly premature so far as this market is concerned, although if there was anything like an average demand it is not unlikely that an upward tendency would be developed. For the time being the supply is full and ample, and to secure better prices a larger consumption is indispensable. What there may be after the turn of the year is impossible to say, but for the present there is no likelihood of anything but a very narrow market, with sales at prices about as follows for Philadelphia and near by points:

No. 1 Foundry	$13.75 @ $14.25
No. 2 Foundry	13.00 @ 13.25
Standard Gray Forge	11.75 @ 12.25
Ordinary Gray Forge	11.25 @ 11.50

Steel Billets.—The demand is extremely light, and sales are mostly in small lots—a carload or two, up to 100 or 200 tons. In such cases $19.75 appears to be the ruling quotation, but for 1000-ton lots, of which there are occasional sales, the price ranges from $19.25 to $19.50, one transaction of that kind being reported to-day at the inside figure. It is stated that sales have been made for Harrisburg delivery at $18.75 for 2000 tons, but we have not been able to confirm it, although it is not unlikely that the report is correct.

Finished Material.—It is very unsatisfactory to report week after week nothing but a dull and declining market, and yet that is all that the facts will justify. Some of the local mills claim to be doing a trifle better on special work, but for anything over 50 or 100 ton lots Western mills scramble after the business almost without regard to price. These who are determined to maintain their reputation for quality refuse to follow the prices made by their Western competitors, on the ground that they must either lose money or sacrifice quality. Consumers, as a rule, are inclined to stand by the manufacturers in this decision, although when it comes to 100 to 300 or 400 tons it requires a good deal of squirming to satisfy both parties. It is positively asserted, however, that material is being delivered from the West at prices which must leave several dollars per ton loss, unless the quality is different to what the buyers claim they are to get. Nothing specially important has been done recently, but there are several projects under consideration which will require several hundred tons each, but they are hardly likely to go through until after the holidays, and even then the uncertainty in regard to the tariff may cause still further delay, so that manufacturers are not figuring with much confidence. Extremely low prices are authorized on them, however, so that if they do not go through it will not be because prices are not low enough, and as a matter of fact, buyers can pretty nearly name their own figures. Small lots are quoted nominally as follows:

Grooved Skelp, delivered	1.45¢	@ 1.50¢
Best Refined Bars	1.45¢	@ 1.55¢
At interior points	1.35¢	@ 1.40¢
Tank Steel	1.45¢	@ 1.55¢
Heavy Plates	1.50¢	@ 1.60¢
Shell	1.60¢	@ 1.75¢
Flange	1.90¢	@ 2.00¢
Angles	1.60¢	@ 1.70¢
Beams and Channels	1.65¢	@ 1.80¢

Old Material.—The demand is of the most unsatisfactory character, as noted for several weeks past, and large lots can only be sold by making lower figures. Nominal prices are about as follows:

No. 1 Wrought Scrap, delivered	$11.50	@ $12.50
Machinery Cast, delivered	10.00	@ 11.00
Heavy Steel Scrap, delivered	11.50	@ 12.50
Old Iron Rails, delivered	14.00	@ 14.50
Old Street Rails, delivered	15.50	@ 16.00
Wrought Turnings, delivered	10.00	@ 11.00
Cast Borings, delivered	6.50	@ 7.00
No. 2 Light Scrap	6.50	@ 7.50

C. B. Houston & Co., of 229–231 Bullitt Building, South Fourth street, Philadelphia, have been appointed selling agents for the Sykes Iron & Steel Roofing Company of Niles, Ohio, and

Chicago, Ill., manufacturers of Roofing and Siding, Metal Clapboarding, Metal Ceilings, &c.

Cincinnati.

(By Telegraph.)

Office of *The Iron Age*, Fifth and Main Sts., CINCINNATI, December 13, 1893.

There has been a light volume of business in Pig Iron during the week, and while prices are not quotably lower, there was not enough done to really test the tone of the market, there being little more than single carloads sold to jobbing foundries in this district; while there was some demand from the East, reaching as much as 1000 tons in a single order, it was freely met at previous prices. The preliminary statement of stocks of Coke Iron on December 1 shows a reduction of about 32,000 tons in November. There is no urgency to sell, because the larger Southern Iron companies have recently sold so liberally that they are disposed to hold off for a time, but still it is apparent that it would be easier to buy for delivery three or four months into the new year than it was a week ago at the prices now current for prompt shipment. There is much melting of Iron in progress by Iron Pipe works, and there are some contracts in sight for Pipe which may keep this up. The present situation of the trade appears to be no worse. But there are apprehensions of what may occur from the operations of the new tariff. There is some inquiry for Charcoal Iron, but it is not large. Quotations are as follows:

Foundry.

Southern Coke, No. 1	$12.25 @ $12.50
Southern Coke, No. 2	11.00 @ 11.25
Southern Coke, No. 3	10.50 @ 10.75
Ohio Soft Stone Coal, No. 1	15.50 @ 16.00
Ohio Soft Stone Coal, No. 2	14.50 @ 14.75
Lake Superior Coke, No. 1	15.00 @ 15.25
Lake Superior Coke, No. 2	14.00 @ 14.25
Hanging Rock Charcoal, No. 1	18.50 @ 19.00
Hanging Rock Charcoal, No. 2	17.50 @ 18.00
Tennessee Charcoal, No. 1	14.00 @ 14.25
Tennessee Charcoal, No. 2	13.00 @ 13.25

Car Wheel and Malleable Irons.

Standard Southern Car Wheel	17.75 @ 18.00
Lake Superior Car Wheel and Malleable	17.00 @ 17.25

Forge.

Gray Forge	10.00 @ 10.50
Mottled Coke	9.75 @ 10.00

Pittsburgh.

(By Mail.)

Office of *The Iron Age*, Hamilton Building, PITTSBURGH, December 12, 1893.

Reliable information received during the past week indicates that the foreign makers of Iron and Steel, especially those located in Germany and England, are already making preparations to establish trade in this country in the event of the passage of the Wilson bill. American representatives of foreign concerns have already made quotations on Finished Material for delivery during next year at prices that in some cases are $3 @ $4 ℔ ton below present ruling prices, which, as is well known, are much lower now than ever before in the history of the Iron and Steel trades. Their prices are made with cost, freight and insurance paid, and for points near seaboard lower freights could often be obtained than prevail from Pittsburgh or other places of supply. The opinion has been expressed by a competent authority that in the event of foreign makers of Iron and Steel getting a foothold in this country with their products, the next step they will take will be to add modern equipments to their plants, thus further reducing their costs and enabling them to name still lower prices in order to offset any reductions that may be made in this direction by our manufacturers, which, of course, can only be done after material reductions in wages have been made. Now that some revisions in the tariff have already been made, the hope is expressed that fair and impartial hearings will be granted to representatives of those industries that have been placed in peril by this measure and that suitable action be taken before the voting begins. The condition of trade is without material change. Demand for everything is of a hand to mouth character, and will continue so until much of the uncertainty surrounding the future has been removed. Prices are largely in buyers' favor and on some lines are perceptibly weaker.

Pig Iron.—As we approach the close of the year, the demand for Pig Iron grows smaller, and in addition consumers are requesting postponement of shipments to an alarming degree. Buyers of Pig Iron say they can see no indications of the market toning up, and until they do they will continue to buy only as necessity requires. Makers are not able to offer any arguments to offset these statements, and it is the impression that an improvement in the Pig Iron market will not come for some time. Prices of Gray Forge of standard makes are maintained on the basis of $10.50, Pittsburgh. Bessemer is very dull at $11, and this price is said to have been shaded on some recent transactions. Foundry Iron is falling off in demand, and prices are lower. Taken as a whole the market is in very unsatisfactory condition, with the outlook for improvement very discouraging. We quote as follows:

Neutral Gray Forge	$10.50 @ ...	cash
All-Ore Mill	10.50 @ $10.75	"
No. 1 Foundry	12.00 @ 12.50	"
No. 2 Foundry	11.00 @ 11.50	"
Bessemer	11.00 @ 11.25	"

We note a sale of 1000 tons of Bessemer for January and February at a price equal to $11.10, Pittsburgh.

Steel.—While there is a fair amount of Steel changing hands, the tone of the market is weak and prices are somewhat lower. Nearly all orders placed now are for delivery into next year, and while the unexpected sometimes happens, the belief is gaining ground that Steel for the first month or two of next year will rule low in price. We are advised of several contracts placed during the week aggregating some 5000 or 6000 tons, at prices ranging from $16.75 to $17, at maker's mill.

Ferromanganese.—There is little doing and we quote 80 % domestic at $52, delivered. A good order would doubtless shade this price.

Plates and Sheets.—Trade continues very quiet, buyers confining their purchases nearly altogether to small lots. There is sharp rivalry between two leading makers here to capture business, and as a result prices are somewhat demoralized. We quote as follows: Tank Steel, 1.35¢ @ 1.40¢; Shell, 1.55¢ @ 1.60¢; Flange, 1.65¢ @ 1.75¢; Marine, 1.75¢ @ 1.85¢; Ordinary Fire Box, 1.85¢ @ 1.95¢, and Railroad Fire Box 2¢ @ 2.15¢. Trade in Sheets is very quiet and will doubtless continue so for a month or more yet. We quote No. 24 Soft Steel Sheets at 2.40¢; No. 26, 2.50¢, and No. 27, 2.60¢. It is probable that for desirable business these prices would be slightly shaded.

Structural Material.—Pittsburgh is understood to be bidding on considerable bridge work, which will likely be closed between now and the first of the year. In Beams and Channels the demand is slow and altogether for small lots, with no large contracts in sight. It is reliably stated that a Pittsburgh mill has offered to sell Beams at 1.60¢, delivered, with a 20¢ freight rate. We quote as follows: Beams and Channels up to 15 inches, 1.45¢ @ 1.60¢, according to size of order; Angles and Universal Plates, 1.45¢ @ 1.50¢; Tees, 1.70¢ @ 1.75¢.

Steel Rails.—The local mill went on Billets this week, but how long this will continue is not known. Pittsburgh is said to have taken about 12,000 tons of the Pennsylvania Railroad order. It is also reported that a Western road is in the market for about 10,000 tons, which is expected to be let this month.

Muck Bars.—We continue to quote best grades at $20.50 @ $21, delivered at buyer's mill. The demand is very light, owing to low prices of Soft Steel Billets.

Wire Rods.—As noted last week, very few Rods are obtainable for delivery this month. For the first quarter of next year mills are asking $24.50, but for a good order it is probable that this price would be shaded.

Merchant Steel.—Of the five or six concerns in this city making Merchant Steel none of them have sufficient orders to operate their plant to anything like full capacity. It is stated that at one or two establishments operations are being continued in some departments with a view of giving work to employees, and also in the expectation that specifications will come in faster after the first of the year. Prices show no material change, although concessions continue to be made when a desirable order turns up. We quote Bessemer Machinery at 1.50¢ @ 1 60¢; Open Hearth Spring Steel at 1.90¢ @ 2¢; Tool Steel, 5½¢ and upward, according to quality.

Bars.—It is hardly necessary to say that trade is not satisfactory by any means. The demand continues light and prices are weak, with concessions being made right along for desirable orders. While the Valley mills continue to quote 1.30¢ at mill, it is reliably stated that this price has been shaded for favorable specifications. Soft Steel Bars are held at 1.30¢ @ 1.35¢ at mill, with Bar Iron extras. These prices are also shaded, according to desirability of order.

Skelp Iron and Steel.—The demand continues light and no material improvement is expected before spring. Prices continue very low, depending largely upon the nature of the order. We quote Grooved Steel Skelp 1.15¢ @ 1.20¢, and Sheared Steel Skelp at 1.30¢ @ 1.35¢; Grooved Iron Skelp may be quoted at 1.35¢ @ 1.40¢, and Sheared at 1.45¢ @ 1.50¢.

Barb Wire.—The demand is only moderate, although some inquiries are coming in for business for delivery next spring. Makers believe that trade next year will be fully as heavy as it was this year. The low prices ruling are expected to favor purchases to considerable extent. We quote Four Point Galvanized at 2.15¢ @ 2.20¢ in carload lots, and 2.25¢ @ 2.30 in less quantities. We quote Plain Wire at 1.40¢ @ 1.45¢ for Nos. 6 to 9 in carload lots.

Wire Nails.—There is a very satisfactory demand, although prices show

Hosted by Google

no signs of improvement. Notwithstanding this, however, some mills are refusing to quote for delivery very far ahead at the present ruling rates. We quote Wire Nails at $1.15 @ $1.20 in carload lots, the lower price named being for large quantities. Large shipments of Cut Nails to Southern points have been made within the last two weeks by river. We quote Cut Nails at 95¢ @ $1 in carload lots, the lower price named being for large orders with desirable specifications.

Pipe and Tubes.—There is nothing new to report, the demand being very light, and no material improvement is expected before spring. Prices continue very low, depending altogether upon the nature of the order.

Coke.—Very little has been done so far this month in the direction of closing up contracts for Furnace Coke for the first half of next year. Furnace operators do not seem inclined to be in a hurry to place their contracts, and, on the other hand, Coke makers do not seem inclined to force matters. As to whether lower prices will rule for Furnace Coke is somewhat doubtful, but this will likely be determined within the next week or two. The situation just now indicates that a waiting game is being played to some extent. For the week ending December 2 there were 8181 ovens in the Connellsville region in blast and 9332 idle, with a total estimated production for the week of 71,105 tons. We continue quotations of last week, as follows: Furnace Coke, $1.10; Foundry Coke, $1.30 to dealers and $1.45 to consumers. Crushed Coke, $1.75 to consumers, all in tons of 2000 lb, on board cars in Connellsville region.

New York.

Office of *The Iron Age*, 96-102 Reade street, New York, December 13, 1893.

Pig Iron.—The market is quiet, some sellers reporting it particularly dull, while others note heavier shipments. It is probably true that more Pig Iron is being melted than for some time since. We quote: Northern brands, $14 @ $15 for No. 1; $13 @ $14.25 for No. 2; $12.25 @ $12.50 for Gray Forge, at tidewater. Southern Iron, same delivery, $13 @ $14 for No. 1; $12 @ $13 for No. 2; $11.50 @ $12.25 for No. 3; $11.75 @ $12.25 for No. 2 Soft, and $12.25 @ $12.50 for No. 1 Soft. Gray Forge is $11.25 @ $12.

Spiegeleisen and Ferromanganese.—Advices received here indicate that the Ways and Means Committee has modified the proposed duty on Ferromanganese by reducing it to 10 %. There is no business in the foreign article at the present time. We quote: Spiegeleisen, 10 % @ 12 %, $21.50 @ $22, and 20 %, $25 50 @ $26, on cars, Jersey City. Ferromanganese remains nominally $55 @ $55 50.

Billets and Rods.—Two of the mills which are closest to this market are hunting for business, the higher grades of Soft Steel being produced by both. We quote nominally: Domestic Billets, $20 @ $22, and foreign Billets $28 @ $28 50, tidewater; domestic Wire Rods, $27 25 @ $28, and foreign Rods, $39 @ $39 50, tidewater.

Steel Rails.—The Pennsylvania Railroad has placed 43,000 tons with the three mills along its line and the Illinois Steel Company. It is understood that the Pennsylvania Steel Company reserved a certain tonnage for this order. Outside of this order no business of any consequence is reported. The price remains $24 80 at tidewater.

Track Material.—We quote as follows for small lots: Spikes, 1.70¢ @ 1.90¢; Fish Plates, 1.30¢ @ 1.50¢; Track Bolts, Square Nuts, 2.10¢ @ 2.40¢, and Hexagon Nuts, 2.30¢ @ 2.50¢, delivered. Concessions would be made for round lots.

Manufactured Iron and Steel.—The Iron work for the Kemp Building was taken by a Pittsburgh mill, again emphasing the fact that Eastern works are unable to capture business. The story is going the rounds that the management of an Eastern mill figured down to cost on a recent job and then took off $10,000, which they were satisfied to lose in order to receive employment for their workmen, the loss to be borne by the senior partner. In spite of this sacrifice the mill in question was underbid by two Pittsburgh mills. The trade is at sea so far as prices are concerned. We quote nominally: Beams up to 15 inch, 1.65¢ @ 1.90¢, 20-inch, 1.90¢ @ 2.25¢, for round lots; Angles, 1.55¢ @ 1.75¢; Universal Mill Plates, 1.50¢ @ 1.75¢; Tees, 1.80¢ @ 2¢; Channels, 1.65¢ @ 2¢, on dock. Steel Plates are 1.45¢ @ 1.60¢ for Tank; 1.60¢ @ 1.90¢ for Shell; $1.90 @ 2.15¢ for Flange, and 2.25¢ @ 2.80¢ for Fire Box, on dock; Refined Bars are 1.45¢ @ 1.9¢, on dock, and Common 1.35¢ @ 1.50¢; Soft Steel Bars are 1.45¢ @ 1.70¢; Scrap Axles are quotable at 1.65¢ @ 2¢, delivered; Steel Axles, 1.65¢ @ 1.90¢, and Links and Pins, 1.65¢ @ 1.80¢; Steel Hoops, 1.70¢ @ 1.90¢, delivered; Cotton Ties, 70¢ @ 72½¢ ℔ 45 lb bundle, at mill; Machinery Steel, 1 45¢ @ 1.50¢; Toe Calk, 1.90¢ @ 2¢ and Sleigh Shoe, 1.65¢ @ 1.75¢, delivered.

Metal Market.

Copper.—The market is quite as complicated now as it was a week ago, with the line of quotations somewhat lower. Contracts for Lake Superior Ingot have been sold on the Metal Exchange at 10 35¢ and at 10 30¢, January delivery. Some lots of actual Copper have been offered on the open market at 10⅜¢, and it would appear that purchases may yet be made at the latter price, in the face of the strong position assumed by leading producers and certain influential operators. Similar irregularity exists as to market value of other varieties, and while 9¾¢ @ 9⅞¢ is generally quoted for Electrolytic and 9⅝¢ @ 9¾¢ for ordinary casting brands, those prices could probably be shaded in some degree, more particularly on moderate quantities for near future delivery. The market is thus in somewhat uncertain form at the moment, and rather dull. The monthly report of the Bureau of Statistics affords the following comparison of exports from the United States during the ten months ending October 31:

Ore.	1893. Tons.	1892. Tons.
To United Kingdom..	37,353	39,189
Germany	1,043	1,462
Other Europe.....	....	165
Total	38,396	40,816
Ingots, Bars, &c.	Pounds.	Pounds.
To United Kingdom..	27,920,478	2,394,063
Germany.....	14,111,198	5,259,710
France	23,156,138	6,192,210
Other Europe..... ..	37,150,076	10,116,915
Other countries.....	548,708	99,006
Total.....	101,889,598	24,061,904

Pig Tin.—Prices have dropped off 15¢ @ 20¢ ℔ 100 lb. The decline is not easily explained except on the supposition that the load carried by leading holders is more than can conveniently be taken care of at the moment. In other words, the lack of any considerable "short" interest in the speculative branch of the market and very conservative buying on the part of jobbers and consumers leaves solid facts of a weighty nature to be wrestled with. Manipulation is extremely difficult in the face of the situation in London and the uncertainty connected with pending American tariff legislation. Some little business has been done on Metal Exchange contracts at 20.45¢, December delivery, and "outside" sales were said to have been made relatively as low, or say 20.50¢, cash, for 5-ton lots.

Pig Lead.—There has been hardly any business, and efforts in the direction of working up deals have been slimly rewarded. In fact, not only speculative sentiment, but good intentions of operators, seem to have been set aside by uncertainties connected with the new tariff bill. Such as it was, the business has been on a rather lower level of prices—say 3.20¢ @ 3.25¢ for ordinary Western brands for shipment during the balance of the year. Correspondingly low figures were said to have been quoted from leading Western centers. About 500 tons have been sold here.

Spelter.—The local market is almost stationary. There are hardly any orders and the offering is exceedingly tame, with some suggestion that producers are slow to accept orders at current prices. For the present 3.80¢ @ 3.85¢ may fairly be quoted on ordinary Western brands, prompt or near future shipment. Choice brands bring about the usual premium.

Antimony.—For other than jobbing quantities there is little movement. Prices are barely steady at 9½¢ for Hallett's and 10¢ for Cookson's.

Tin Plate.—Business has been extremely tame. Only small orders have come this way for spot goods and the uncertainties connected with the tariff have had a restraining influence upon ventures in futures. Upon the whole, the market shows rather weak tone. Spot quotations are as follows: Coke Tins—Penlan grade, IC, 14 x 20, $5.30; J. B. grade, do., $5.35; Bessemer full weight, $5.35; light weights, $4.90 for 100 lb, $4 80 for 95 lb, $4.62½ for 90 lb. Siemens Steel scarce. Stamping Plates—Bessemer Steel, Coke finish, IC basis, $5.60; Siemens Steel, IC basis, $5.65; IX basis, $6.75 @ $6.80. Charcoals—Melyn grade, IC, $6.35; Crosses, $8; Allaway grade, IC, $5.60; Crosses, $6.75; Grange grade, IC, $5.75; Crosses, $6.85. Charcoal Ternes—Worcester, 14 x 20, scarce; do., 20 x 28, $11.35; M. F., 14 x 20, $7.35 @ $7 37½; do., 20 x 28, $14.75; Dean grade, 14 x 20, $5.35; do., 20 x 28, $10.50 @ $10.60; D. R. D. grade, 14 x 20, $5.15; do., 20 x 28, $10.10; Alyn, 14 x 20, $5.35; do., 20 x 28, $10.50; Wasters—S. T. P. grade, 14 x 20, $4.75; do., 20 x 28, $9; Abercarne grade, 14 x 20, $4.60; do., 20 x 28, $8.87½.

A series of interesting experiments of an altogether novel character is about to be carried out at the Government torpedo station at Newport, R. I. The experiments will be under the direction of Commander Converse, and are undertaken with the object of determining the probable effect on the crew of a submerged submarine boat of the explosion of a torpedo near by.

Financial.

Except for a partial resumption of gold exports, the week in financial circles has been almost entirely void of interesting or noteworthy features. Business on the Stock Exchange has been sluggish and shows no sign of improvement. Rather the reverse. There are no indications in the banking, commercial or the industrial worlds of any tangible revival of enterprise or speculation. The whole business of the country seems

The abnormal accumulation of money at the chief financial centers of the country continues to be a source of distress to banking institutions, which are unable to find profitable investment for their unwieldly reserves. This plethora of idle money, loaning at easy rates, is an invitation to speculative excitement, which is a distinct danger, while legitimate enterprise leaves it unutilized. There are signs this week, however, that the maximum of accumulation has been at last reached. The flow of currency from the interior to the center has evidently been checked, as demonstrated by Saturday's statement of the New York banks, which showed a much smaller rate of increase in the surplus reserve than has been the case for many weeks, the week's gain being only $468,000. The decrease is explained as due to the fact that interior points have sent in all the money they can spare, and to the further fact that Eastern banks are contemplating a reduction of the rate of interest they now allow on the balances of out of town institutions. This explanation is, moreover, verified by the fact that both at Chicago and St. Louis New York exchange is again at par. The New York banks now hold a reserve of very nearly $200,000,000, the surplus over legal requirements being $76,500,000. Compared with the surplus reserves for the corresponding week of the last five years these figures are remarkable. They were as follows:

December 10, 1892, surplus	$5,509,800
December 12, 1891, surplus	15,339,500
December 13, 1890, surplus	607,075
December 14, 1889, surplus	2,630,650
December 15, 1888, surplus	9,672,225

A favorable feature of the bank statement was a further increase in loans of nearly $3,000,000.

The announcement of export shipments of gold to the amount of $1,700,000, instead of causing apprehension, as did similar news in the summer, was received with absolute indifference in the money and stock markets. It is realized that a considerable amount of the precious metal can be sent abroad without doing any harm, and the specie can be obtained from the banks without trenching on the Treasury reserve. The curious fact is recorded that one bank alone supplied the whole of the amount shipped, which was sent to Germany. The outward movement is a perfectly natural one, in view of the low rates of interest here and the comparatively high rates ruling in Europe, where money is urgently wanted in some quarters. The banks here are, in fact, able and willing to supply a large amount of gold if Europe calls for it.

Money on call continues in abundant supply at 1 % @ 1½ %, tending, however, more to the higher figure. Time loans are easy at 2½ % @ 3½ % for 60 days up to seven months, offerings being considerably in excess of demand. Good mercantile paper is readily marketable, but the supply is not large. Rates are 3½ % @ 4 % for indorsed bills; 4½ % @ 5 % for first-class single names, and 5 % @ 5½ % for other descriptions of paper. The stock market during the week has been dull and featureless, reaching at the close a pitch of inactivity almost unexampled. Trading was of the narrowest description, and almost purely "professional." Several causes tended to depress the market, including unfavorable reports from a number of Western railroads and Eastern trunk lines, rumors of larger gold exports, and "bearish" tales from Washington, all of which were promptly utilized for "bear" purposes by that contingent. Stocks closed on Saturday dull and heavy, with lower prices almost all along the line. Some London buying on Monday served to hearten the market a trifle, but the publication of the St. Paul traffic returns for the first week in December, showing a decrease of nearly $200,000, operated unfavorably on that and other granger stocks. Apart from some active manipulation in industrials, Tuesday's market was as dull as could be, closing strong, nevertheless, with an upward tendency in several issues. The following list shows the extreme fluctuations of some of the principal stocks during the week, with closing prices on December 13:

	Highest.	Lowest.	Closing. Dec. 13.
Am. Sugar Ref.	84⅜	78⅝	79⅞
Atchison, T. & S. Fé	20⅜	18⅝	19¾
Balt. & Ohio	72½	72⅜	73¼
Chicago Gas	68	65⅜	67⅓
Chic., B. & Q.	79⅞	77¾	78⅓
Chic., Mil. & St. Paul	65⅛	62¼	63¼
Chic., Rock Isl. & Pac.	70	67¼	68¼
Del. & Hudson	134¾	132⅛	133
Del., Lack & Western	168	163	164
Gen. Electric	39	33¼	39
Lake Shore	128⅛	126	127
Louisville & Nashville	52	49⅜	50⅛
Manhattan	129	127	129
Missouri Pacific	25⅜	24¼	25
National Lead, Common.	24¼	21¼	23⅛
New Jersey Central	118	117	118
New York Central	102⅝	101⅜	102⅛
N. Y., L. E. & Western.	15¾	14⅜	15⅜
Northern Pacific, Pfd.	22½	21½	22½
Philadelphia & Reading	21⅜	20	20½
Richmond & West Pt., Terml	3	2¾	3¼
St. Paul & Omaha	39	37¾	38¼
Union Pacific	22¼	20¼	21⅛
Western Union	90	87⅜	88¾

Railway and miscellaneous bonds, although irregular, have been stronger and more active than the stocks. Surplus money appears to be finding something of an outlet in these issues, which have generally advanced in price during the past week or two. Government bonds continue firm, with a fractional advance over the rates of last week. The closing quotations were as follows:

	Bid.	Asked.
2s, 1891, registered	95¼	.....
4s, registered	113¾	114⅛
4s, coupon	114¾	115½

Foreign exchange has been strong and active for the greater part of the week, prices having on several days touched the gold exporting point. The supply of bankers' and cotton bills, although larger, has been readily absorbed by remitters. Toward the middle of this week the market for sterling was a trifle easier, owing to the demand being for the moment satisfied. It is not expected, however, that rates will decline again to any extent at present. Actual business was done at the close at $4 84½ @ $4.84¾ for 60 days; $4 86¾ @ $4 87¼ for demand; $4.87¼ for cables and $4 83½ @ $4.83⅝ or commercial. Domestic exchange on New York is quoted as follows: New Orleans, commercial 100 discount, bank par; Charleston, buying ⅛ discount, selling ⅛ premium; San Francisco, sight 5, telegraph 10 premium; Savannah, buying ⅛ discount, selling ⅛ premium; St. Louis, 85 premium bid.

Bar silver closed in London on Wednesday at 32 pence ℔ ounce, and in New York 70¢ ℔ ounce. There was exported from New York to London last week $968,957 of silver, the largest weekly shipment that has been made for a long period. The demand for the metal from Eastern countries appears to be heavy, especially from China. It is thought that this demand will continue active, and consequently that the price of silver is not likely to decline.

Railway earnings reported for the first week in this month are not of an entirely satisfactory character, those from Western roads evidencing a decline in both freight and passenger traffic. The *Financial Chronicle* computes the gross earnings of 74 railroads for the third week of November at $7,668,323, a decrease of $556,222, or 6.76 %, as compared with the corresponding week of last year; for the fourth week of November 57 roads earned $8,642,926, a decrease of $968,478, or 10.08 %; for the month of November 88 roads earned $36,472,124, a decrease of $2,691,285, or 6.87 %.

British Iron and Metal Markets.

[*Special Cable Dispatch to The Iron Age.*]

LONDON, WEDNESDAY, December 13, 1893.

The line of prices for Pig Tin has averaged somewhat lower. Early in the week buying orders were fairly numerous and served to sustain the market. Some support came also from absorption of supplies received from the East and anticipation of better American support. To-day's market showed rather soft tone, with £76 quoted for prompt delivery, and £77. 17/6 for three months' futures.

Copper prices have remained almost stationary. There has been pressure to sell at intervals, chiefly to realize profits, but good buying acted as an offset later on. The buying included fair lots for home consumers apart from the purely speculative movement. Purchases for India account also helped to sustain the market, but realizations on cash lots had a counteracting influence. At the close the market was steady, with £43. 2/6 quoted for Merchant Bar prompts, £43 for three months' futures and £47 for Best Selected English.

Tin Plate has met with rather better sale. The dealings were chiefly in squares and odd sizes, fair orders for which were placed at some advance on late lowest prices. There has been some improvement also in the demand for all sizes, but lowness of prices offered restricted business. Work has been resumed at the Aberdare mills. Exports last month were 26,000 tons, against 29,000 tons in November, 1892. The quantity sent to the United States was 15,000 tons and 20,000 tons respectively. Stocks at Swansea are now about 222,000 boxes. Liverpool quotations are as follows:

IC Charcoal, Alloway grade	12/3 @ 12/9
IC Bessemer Steel, Coke finish	11/3 @ 11/6
IC Siemens " " "	11/6 @ 11/9
IC Coke, B. V. grade, 14 x 20	11/3 @ 11/6
Charcoal Terne, Dean grade	10/9 @ 11/

Hosted by Google

Pig Lead has met with limited sale, and prices have ruled rather easy at £9. 7/6 @ £9. 10/ for soft Spanish.

Spelter remained quiet, and prices are barely steady at £17 for ordinary Silesian.

There have been no new developments in the markets for Iron and Steel. Business continues moderate throughout and has been chiefly at prices that have ruled for some little time past. Last dealings in warrants were at 43/10 @ 43/11 for Scotch, 35/10½ for Cleveland, and 45/2½ for Hematite.

Horace B. Silliman, who has been a dealer in manufacturers' supplies at Cohoes, N. Y., for many years, has sold his business to Daniel M. Sutherland, who has been Mr. Silliman's traveling salesman. Mr. Sutherland will continue the business at the old stand.

As we go to press we learn with deep sorrow that George H. Babcock, president of the Babcock & Wilcox Company of New York, is dangerously ill at his home in Plainfield, N. J.

Six hundred idle ovens were lighted in the Connellsville coke region during last week, and the outlook is said to be brighter, orders for coke having been materially augmented by the resumption of work at a number of large furnaces and foundries. The ovens now in blast number 8181 out of a total of 17,513.

English Iron Workers' Wages.

The following statement, which is an exact copy of one issued recently by an English company, will prove interesting to those who wish to make comparisons of English and American wages. It also possesses many curious features which sheet mill men will appreciate:

Roller pays furnaceman and shearer and own help.
Figures marked * represent total output of mill.

The curious features are the wide difference between the grading of gauges and prices paid compared with the American scale. The only respect in which English rolling mill hands have the advantage over Americans is in regard to the extra price paid for rolling large sheets. It will, no doubt, surprise American sheet rollers to learn that in English mills 2 shillings 6 pence per ton extra is paid for No. 15 gauge and lighter if it measures:

Wide. Long.
36 x 90 inches or over.
33 to 35 x 108 inches or over.
24 to 32 x 114 inches or over.

The many variations of his character make it difficult to compare prices by the ton, but it is easy to ascertain the amount earned per capita from the statement shown. The total earnings for two weeks amount to £41. 12/10. This is for 11 turns of 12 hours each, and is divided between eight men and one boy. The average per capita would be £4. 12/6, equivalent in American money to $22.38, or $11.19 per week. In an American sheet mill the average earnings, if divided equally between the crew, would be about $19.50 per week. This statement is made after careful examination of written accounts handed to workmen by employers. There is nothing estimated or guessed. Notwithstanding the remarkable difference in these figures it is a fact that English workmen work 12 hours per turn, while Americans only work eight hours.

HARDWARE.

Condition of Trade.

THE middle of December usually witnesses a falling off in the demand for goods and a gradually diminishing volume of business. The present year is no exception, and some special causes are operating to make the aggregate of sales even lighter than usual. In view of the condition of trade more than the usual number of travelers have returned home and are waiting until their efforts will be rewarded by a larger measure of success. The trade, however, on the whole is still being canvassed pretty thoroughly. The conservatism which has characterized business during the past few months is still the policy of merchants, who are limiting their purchases as much as possible until they have taken stock and ascertained the results of the year's or half year's business. At the present time the uncertainty with reference to the action of Congress in the matter of tariff legislation is also having a marked effect and buyers are waiting until this matter is definitely settled. There is, however, a good deal of business doing in a small way, as stocks in the hands of both retailers and jobbers are in most cases more or less broken. There is also a fair activity in seasonable goods and some late orders for articles for the holiday trade help to swell the aggregate of business. Some large buyers have deferred much longer than usual the placing of their orders for the spring trade, and a good many of them are still holding off. The unsatisfactory condition of the market in the matter of prices, especially in staple goods, has not a little influence in deterring merchants from purchasing at this time. While the volume of business is thus only moderate, it is gratifying to note the constant improvement in the financial condition, justifying the expectation that with an early resumption of activity in mercantile circles there will be a satisfactory spring trade. It is especially a matter for congratulation that Hardware merchants throughout the country have so well stood the financial strain of the past few months, and it is hoped that with the turn of the year there will not be many failures to report.

Chicago.

(*By Telegraph.*)

The steady winter weather of the past fortnight has enlivened business somewhat in the Shelf Hardware line. It has especially improved collections. The prevalence of snow throughout the Northwest has enabled farmers to market a great deal of their produce and in this way has undoubtedly made money much easier in purely agricultural districts. The movement, however, has not extended to all classes of the Hardware jobbing trade. Manufacturers of Tinware are exceptionally dull. The inventory season is always expected to be of this character, but much less is doing this year than in previous similar periods, and a revival of demand is not expected now until considerably after the turn of the year. The heavy Hardware jobbers also report their business quiet, except in Sleigh stock, which is in particularly good demand and to some extent makes up for the dullness in other departments.

St. Louis.

(*By Telegraph.*)

Trade during the past week has improved somewhat over the preceding one, but is still considerably less than last year's. The unsettled condition brought about by the proposed Wilson tariff measure continues, and it is pretty generally agreed that any decided improvement is out of the question until this measure is disposed of. A feature of the market is the number of small orders now being received, many of them from large concerns, who were considered carload buyers, but who now buy from hand to mouth. With the exception of a few lines, such as Barb Wire, Wire and Cut Nails and Plain Wire, prices are well maintained. Jobbers do not look for much business between now and the holidays, and are making their preparations for stock taking. Collections are without change.

Notes on Prices.

Wire Nails.—With the advance of the season and the approach of the holidays there is a falling off in the volume of business, but the fact that stocks in dealers' hands are limited is evidently compelling a good many houses to purchase in larger or smaller quantities for a supply of their immediate requirements. Manufacturers also report more inquiry in regard to terms for shipment of fair assortments early in the year, but jobbers and other large purchasers are quite generally deferring placing their orders. Careful attention is, however, given to the market, and buyers are watching it closely and are preparing to place their orders at the first indication of a turn in the matter of prices. This point, however, has not as yet been reached. Notwithstanding the fact that quotations which have ruled for the past few weeks have been regarded as abnormally low the market has developed a further weakness and some sales have been made at slightly lower figures than were regarded as the extreme prices a week or ten days ago. The market is represented by the quotation of $1.15 for carload lots at mill, but attractive orders could without doubt be placed at a slight concession from this figure.

Chicago, by Telegraph.—Some manufacturers of Wire Nails are booking orders for good quantities, although the volume of business is by no means so large as that of November. The current trade is, however, not generally distributed, and some concerns complain of a dearth of orders and expect to close down their factories at an early day, not to resume operations until some time in the new year. Prices are irregular, the nominal quotation continuing at $1.30, Chicago, but it is a comparatively easy matter to secure better terms from some of the manufacturers who are eager for business. The spot cash sellers are again making their appearance to some extent. Jobbers quote small lots from stock at $1.35 to $1.40.

Cut Nails.—The Cut Nail market is sluggish and rather weak, being affected by the same influences as Wire Nails. There is some irregularity in the quotations of the different mills, but in the East the market is represented by 90 cents for carload lots at mill, a figure from which concessions are made by some of the manufacturers. There are, however, others who are endeavoring to obtain a slightly better figure. Small lots from store in New York are quoted regularly at $1.20.

Chicago, by Telegraph.—The Cut Steel Nail trade is quiet and is expected to become more so as the end of the year approaches. Prices are maintained at $1.15 to $1.20, Chicago, according to the character of the order. Small lots from stock are selling at $1.25.

Barb Wire.—The Barb Wire market continues in an unsatisfactory condition, both as regards the volume of

Hosted by Google

business and prices. The demand is referred to as sluggish, and most of the mills report the aggregate of orders as small. Prices have receded slightly below the point at which they have been held for a few weeks, and the market is now represented by the quotation of $2.10 to $2.15 for carload lots of Four-Point Galvanized at mill.

Chicago, by Telegraph.—A great deal of business has been placed recently by manufacturers of Barb Wire with jobbers in the West and Northwest for spring delivery. Prices appear to have been well maintained, owing to the noticeable conservatism of some manufacturers who have usually competed actively for business in this territory. Prices may, therefore, be quoted at $2.35 to $2.40 for factory lots ef Galvanized, and $1.95 to $2 for Painted. Jobbers continue to quote small lots from stock at $2 55 for Galvanized, but report that manufacturers are more and more absorbing the retail trade.

Cordage. — The manufacturers of Cordage report a light demand, buyers refusing to place orders in excess of their immediate requirements. We have to record a still further decline in the price, the following prices being obtainable on large lots, f.o.b. factory or New York: Manila, 7¼ cents; Sisal, 5 cents, and New Zealand, 5 cents. The competition between the different manufacturers continues active. The matter of the reorganization of the National Cordage Company is reported to be progressing satisfactorily, and steps are being taken to consummate the purchase of the plants and property of the National Cordage Company by the Reorganization Committee as trustees.

Cistern and Well Cover.—The Safety Cistern and Well Cover, manufactured by Menefee & De Vilbiss, Fort Wayne, Ind., an illustration of which appeared in our issue December 7, 1893, is sold at a discount of 35 per cent. from the following list:

Size of cover.	Each.
36 inches	$3.85
38 "	4.15
40 "	4.65
43 "	5.50

Superior Hinges. — The Superior Hinge for gates, illustrated in our issue of December 7, 1893, and manufactured by Francis Keil & Son, 163d street, west of Third Avenue, New York, is sold at a discount of 25 and 10 per cent. from the following list:

No.	Doz. prs.
2750, Japanned	$12.00
2750 x 3/0, Copper Plated	15.00
2749, Plain Bronze Metal	22.50
2749½, Nickel Plated	22.50

Youths' Bench.—The Youths' Bench manufactured by the Grand Rapids Hand Screw Company, Grand Rapids, Mich., and illustrated in *The Iron Age* November 30, 1893, is listed at $8 each, from which a discount of 35 per cent. is allowed.

Extension Hack Saw Frame.—The California Extension Hack Saw Frame, manufactured by Knapp & Cowles Mfg. Company, Bridgeport, Conn., of which an illustrated description appeared in *The Iron Age* December 7, 1893, is sold at $12 per dozen, subject to a discount of 25 per cent.

Sash Lift.—The Willer Sash Lift, manufactured by Willer Mfg. Company, Milwaukee, Wis., and illustrated in our issue of November 30, 1893, is sold at a discount of 50 per cent. from the following list:

	Per dozen.
Berlin Bronze	$1.00
Brass	2.00
Genuine Bronze	2.00
Old Copper finish (on Bronze)	2.00
" " " (on Iron)	1.50
Nickel plated (on Iron)	1.50
" " (on Brass)	2.50

Glass.—No new or interesting features have developed in connection with the Glass trade during the past week. No improvement in demand is noticed, and such orders as are received are for limited quantities for immediate use. There is a disposition on the part of some of the manufacturers who have not as yet started up their works to postpone immediate resumption. Prices at the present time are so uncertain that it is difficult to name quotations that will stand good under all circumstances. Local prices on American Window Glass are referred to as ranging from 80 and 20 to 85 per cent. discount, according to quantity. Pittsburgh prices are reported as being from 85 and 5 to 85 and 10 per cent. discount, while it is understood that Western factories are making still lower prices. Plate and imported Glass show no change in demand or prices.

Origin of Hardware Terms.

THERE is more or less uncertainty as to the origin of many trade terms in general use, and not a few of the designations of various kinds and sizes of Hardware articles are involved in obscurity as to the reason for their adoption. As examples of this the way in which Nails are designated as 10 or 20 penny, the gauge of Shotguns, the numbers of Screws, Caps, &c., will readily occur to our readers. These and similar terms have been unquestionably in use for a long time and the origin of terms is largely tradition, as most of such markings originated with foreign makers before Hardware was manufactured in this country. When similar goods were first made here the designations familiar to the trade were naturally adhered to by the American producers so that confusion might be avoided, in very much the same way as American Tin Plate makers have adopted the foreign terms to designate the different grades of American Tin Plates. Among well informed persons explanations of most of these terms are, however, current, and in many cases there is little reason for doubt as to their correctness. In some instances, however, there are different and inconsistent explanations given and on these questions there is, of course, more or less doubt. We give below the opinions of well informed parties as to the origin of some of these designations:

The Gauge of Guns.

The usage by which the bore of Guns is designated, as, for example, 12 gauge, is supposed to have originated in this way: The gauge of Guns was determined by the number of pure lead bullets, spherical in shape, any one of which would fill the bore of a Gun. Thus a gun whose bore would be filled by one of 12 such bullets weighing together a pound was termed 12 gauge.

Numbers of Caps.

The numbers given to Caps are supposed to have been arbitrarily given by foreign makers and were continued by American manufacturers when the goods were produced here.

Bastard Files.

The origin of the term "bastard" as applied to Files is generally explained in this way: The rough File was first made, then the second cut. A demand for a File between the two was afterward developed, which being out of the regular line was termed bastard.

Penny Applied to Nails.

Two explanations are current in regard to the use of the term "penny" as a designation of the size of Nails. The one which is very generally adopted is as follows: That the word penny is a corruption of pound. Thus, a 4d Nail was one of such a size that 1000 of them weighed 4 pounds. It may be remarked that originally the term "100" when applied to Nails was six score, or 120, consequently the 1000 was 1200. Another explanation is based on the fact that Cut Nails are comparatively of recent date, having been first made in this country, and were introduced in England as late as 1846. Formerly all Nails were forged, and the price for forging 1000 1½-inch Nails was 4 pence, or as the term is now used, 4d; the price for forging 1000 2-inch or 6d Nails was 6 pence and so on. As a reason why small Nails could be forged so cheaply it is stated that children often did the work.

Numbers of Horse Nails.

The numbers given Horse Nails are supposed by some to have originated in the same way as penny with Cut Nails, according to the first explanation given above. Thus, 1000 of any size weighed the number of pounds designating the number of the Nail. No. 6 Horse Nails would then weigh 6 pounds to the 1000; No. 8, 8 pounds, &c. It is obvious, if this explanation is correct, that the present weight of any number of Nail does not correspond to the original weight of the same number.

Numbers of Screws.

The numbers by which Screws are known designate the numbers of the Screw gauge to which the sizes of the Screws correspond. It would appear that Screws were first made in the various sizes and then a Screw gauge made as a standard, and Wire used in the manufacture of Screws drawn to conform to this standard gauge. The Screw gauge bears no relation to the Wire gauge, as in the case of Screws the largest number designates the largest wire, while in the Wire gauge the largest number represents the smallest size Wire.

Hosted by Google

Bicycles for 1894.

FIRST ARTICLE.

IN GENERAL OUTLINE the model of the 1894 Bicycle will not differ materially from the 1893 pattern, although improvements on 1893 machines will be introduced by a large number of manufactures. The diamond style of frame, with long steering head and long wheel base, has been so universally approved of that there is likely to be little, if any, change in these particulars.

Weight.—There is, apparently, a tendency toward machines weighing not much over 30 pounds for road use, which weight is made possible without sacrificing strength by the use of tubing of relatively large diameter and light gauge.

Tires. — Improvements in pneumatic tires continue to be made, especially in the ease with which they may be put on and taken off the rims, and in repairing.

Wood Rims are evidently growing in favor for wheels and will be put on machines regularly by some makers. Other manufacturers leave steel or wood rims optional with the purchaser.

Special Features.—Chainless safeties, elliptic sprockets and other features which are peculiar to various machines will find favor with many riders.

Hardware Trade.—There appears to be an increased disposition on the part of manufacturers to market their product through the retail Hardware trade rather than to sell to jobbers, as the best method of getting their wheels before the public, and to give the retailer the extra discount usually received by the jobber. Wholesale houses, will, however, continue to absorb the product of factories, and dispose of the output to retailers and agents.

Prices for 1894.—There is likely to be more of a variation in the list price of 1894 wheels than in previous years. This will allow merchants to supply machines in accordance with the wishes of their customers in quality and in price. The Eagle Bicycle Mfg. Company, Torrington, Conn., announce that their line for 1894 will consist of wheels at the following weights and list prices: 30-pound wheel, $115; 28-pound wheel, $125; 25-pound, $135, and 21-pound machines, $150. It is not improbable that others of the manufacturers will grade the list prices of their output in accordance with the weight; the lighter machines being listed the highest. The demand for lower priced wheels may result in cheaper wheels being placed on the market. There are still a large number of riders who will be satisfied with nothing but a high priced wheel of the finest finish and grade.

Makers' Announcements.—Many manufacturers have already completed arrangements as to their line of Bicycles for 1894, while others have not as yet perfected their plans for the ensuing year. We will take the opportunity of placing before our readers information regarding the output of the numerous American Bicycle manufacturers at as early a date as possible.

THE STOVER BICYCLE MFG. COMPANY, Freeport, Ill., will again offer the Phœnix wheel on the same general lines as manufactured in 1893, with many marked improvements. The frame will be manufactured with the 10-inch head placed at the proper angle to combine strength with good steering qualities. Their trade has gradually been drifting into a demand for a frame that will fit the rider so as to allow the use of a very short L rod, and for 1894 they will construct frames that will fit riders of any size. They will continue to use Credenda tubing in all parts of their Bicycle, and the bearings on the coming season's output will be dust proof, including pedals, and the important feature in this is that the caps in no wise interfere with the adjustment of the bearing. For handle bars they will manufacture dropped or raised bars with or without brake, as ordered, these bars having different angles. They will use wood rims when so ordered. Their Thoroughbred Phœnix A will be catalogued at 28 pounds, their roadster at 32 pounds; and they will build a special racer weighing 22 pounds. They contend that there is a limit to the light weight idea, and have found that machines of the above weight give the best satisfaction. The company remark that their wheels for 1893 gave universal satisfaction, and that it was upon a stock wheel of the Phœnix pattern that C. E. Henry of San Francisco made his trip across the continent to New York without a mishap.

THE FREEPORT BICYCLE MFG. COMPANY, Freeport, Ill., will make no change in their 1893 models for their 1894 product, excepting that they will add two modifications of their model D, one being with a longer saddle post to accommodate extra tall men, and another with a shorter saddle post to accommodate shorter men or boys who wish a very high grade wheel. For the coming season they will have an improved method for fastening the sprocket wheels, both driving and rear; these are positive fastenings and not liable to give the rider difficulty. The elliptical sprocket gear will remain their special feature, as heretofore. They will also offer an improved saddle which has been thoroughly tested, and for its weight shows great strength. They will make a road saddle with sufficient spring to be perfectly comfortable, at a weight not more than 2 or 3 ounces in excess of the ordinary racing saddle. This is readily adjusted to any desired position for the rider, and to any desired angle upon the wheel.

THE CENTRAL CYCLE MFG. COMPANY, Indianapolis, Ind., announce their line for the coming year to be the Central, model B, a high back double frame machine weighing 24 to 28 pounds, which will be listed at $150; the model A, a little heavier, will list at $100, and the Lady Central will list at $150. The Lady Central will weigh 30 pounds. In addition to these wheels they will have their Ben Hur as a cheap wheel. Their business will be done through dealers, instead of jobbers, as heretofore.

THE CENTURY MFG. COMPANY, Indianapolis, Ind., are successors to the Standard Mfg. Company. They are making a strictly high grade Bicycle, known as the Arrow. Their wheel was gotten out late in the past season, so there will be little or no changes for 1894. The line includes a roadster, scorcher and racer, all under the general name of Arrow. An 18-pound special racer will also be made, with a 42½-inch wheel base.

THE LEAGUE CYCLE COMPANY, Hartford, Conn., will for the coming year turn out three styles of wheels, all strictly high grade: League chainless roadster, League chainless scorcher, and League chainless ladies' safety. The roadster will weigh 30 pounds, the scorcher 27 pounds and the ladies' wheel 32 pounds. The company do not use chains on any of their wheels, bevel gearing being their special feature for propelling power. The company remark that they feel warranted in entering much more largely into the business than heretofore, as the wheel has met with public favor. They expect shortly to move into a larger building in the heart of the city of Hartford, occupying the entire building, which has a floorage of 30,700 square feet. Nicely fitted offices and salesroom will be located on the first floor, while the balance of the building will be fitted with complete equipment, including considerable new machinery for the manufacture of Bicycles.

HIBBARD, SPENCER, BARTLETT & CO., Chicago, issue a special advance catalogue of their 1894 line of Bicycles. Their line has been very much improved from the highest to the lowest grade. They control the entire product of the St. Nicholas Mfg. Company, and are therefore able, they state, to offer absolute protection and the most advantageous terms to dealers among the Hardware trade, whose business they especially solicit. The catalogue illustrates the Varsity, Courier, Gypsy, Tornado, Queen Mab, Blizzard, Fairy, Cricket, Wanderer and Little Jewel—listed from $125 to $20.

HORTON, GILMORE, MCWILLIAMS & CO., Chicago, are not making any changes for next year in regard to Bicycles, their line being as complete and exactly the same as it was last year.

WILLIAM READ & SONS, Boston, Mass., remark that the New Mail has been especially taken up by the Hardware trade the last few years. The pattern for '94 will be changed to conform to the present ideas of frame in having the top bar more horizontal, and the whole machine will be lighter. They will also have a line of medium priced wheels down to $33, which are largely handled by the Hardware trade, their 1894 models comprising several new features in patterns. This line covers both men's and youths' sizes.

THE EAGLE BICYCLE MFG. COMPANY, Torrington, Conn., will list their 1894 wheels according to weight, as follows: List $115, weight 30 pounds; list $125, weight 28 pounds; list $135, weight 25 pounds, and list $150, weight 21 pounds. All of their wheels listed at $125 and over will be fitted with aluminum rims, with which, the company state, they had success throughout the year 1893. Morgan & Wright, Akron, G. & J. and Palmer tires will be used by them, and their $150 machines will be fitted with the Palmer tire unless otherwise ordered. All their wheels will be built with special deep frames, to enable the rider to carry his saddle at the top of the frame. Wheels listing at $135 and $150 will be built under their special copyright design. One of the prominent features will be the cold swaging process to which the tube is treated, reducing large tubes to the required size and tapering the same into delicate forgings, to make the fiber of the tube firm and dense and the temper even. The tapering process begins back about 6 inches from the forging, thus forming a brace on either side, which is designed to make the taper joint much stronger than when

Hosted by Google

the straight tubing enters into the forgings. The company claim that Eagle taper joints are much stronger than straight joints. Another special feature of their 1894 machines will be handsome decoration in gold on black enamel. This, it is stated, is something new and distinct, and will be put on wheels listing at $135 and $150.

F. C. AMES & Co., 335 Broadway, New York, are handling a line of Bicycle Supply Specialties, which they control to great extent. Among these are cork handles, chain lubricant, rubber solution, Dickens' pump and featherweight bell. The handles are of a high grade of cork, with ferrules sufficiently heavy to allow the handles to be driven on, if necessary. The chain lubricant is put up in two sizes of collapsible tubes. The base of the lubricant, we are informed, is plumbago, and is mixed with liquids other than oil, preventing the accumulation of dust and dirt on the chain. The rubber solution is also put up in tubes. The Dickens' pump is a double acting hand pump, and the bell, a single stroke one, weighs less than two ounces.

Holiday Show Windows.

ADDITIONAL ATTENTION may profitably be given to dressing show windows in anticipation of holiday trade. Activity in this direction need not be confined to merchants who make a special feature of Christmas goods, as those who carry House-furnishing, Sporting and Athletic goods have many articles in stock, which, if presented to the public in holiday attire, will solve for them the vexing question of what to buy for presents. In fact, it is more needful for those to make a display who have not the reputation of handling holiday goods than for those stores to which purchasers would naturally go to have their wants in this direction supplied. At this time of the year customers hold their purse strings less tightly and expect to be more liberal in their purchases than at other seasons. These facts should be taken advantage of, and high priced goods and those which have been hard to dispose of, which might be considered at all suitable for presents, can now be brought forward with good effect. Articles which are old to the merchant, and which he may be disgusted with, are probably new to the majority of his customers, and will repay some labor in putting them in an attractive condition. It may be surprising, after the holidays are over, to see how many of these old stand-bys have taken to themselves wings.

While every one is supposed to know the use of most articles kept in a Hardware store, nicely lettered cards attached to the article, giving its name or use, will attract attention. In addition to the name some sentence, as, "Does your wife sweep?" "How's the old Tea Pot?" "A nice Christmas present!" "Does the boy skate?" "This is no hair splitter, but cuts clean!" &c., attached to corresponding articles, will produce the desired effect in many cases.

Prices marked in plain figures and placed on articles in the window will catch many customers, especially as many buyers have decided just the amount they will spend for each gift. If the article is made to appear to them suitable and the price comes within their means, an examination of the goods, with a few judicious words from the salesman results in a sale. The purchaser would probably not have come into the store to inquire the price, especially if not in the habit of trading there. The majority of people will buy presents, even if it involves going without some of the necessaries, and such prices should be made that will appeal to buyers as bargains. In such times as these merchants may be satisfied with the exchange of goods for the cash, at a slight advance on the cost, rather than expect large profits because it is holiday time.

This principle applies to Christmas window dressing, as to any other—not to have the window crowded. An attractively arranged window, with goods shown as nearly as possible in the manner in which they are used, supplemented by a bright colored sign outside calling attention to Christmas goods, will cause people to stop in front of the store. In making signs, prices and cards for the display goods something better than wrapping paper and a marking brush is demanded. People will judge the quantity and quality of the goods before seeing them, by the quality of the signs. Let these be made by the best sign writer within reach and be done in his best style.

Something green in the window helps the display, as evergreens are so intimately associated with the popular idea of Christmas. Not too much green, but enough to give the window a decided holiday effect; not as if the evergreens got in there by mistake, but showing care and taste in arrangement and that a definite object was in view. An advertisement in the local paper can be used to advantage, in which special attention should be called to the window display. Articles in the window can be changed about each day for sake of variety, other goods substituted, and goods disposed of for future delivery can be marked "sold," showing business is being done.

All the foregoing suggestions are based upon any present stock, without special additions of holiday goods, and the work of getting things in shape for display cannot be commenced too soon.

Price-Lists, Circulars, &c.

BUHL STAMPING COMPANY, Detroit, Mich.: Buhl Lanterns. Circulars illustrate the Buhl Lanterns in colors, showing the Brilliant and Mascot assortments. The Brilliant assortment consists of one dozen square lift tubular Lanterns, assorted colors—red, blue, russet and maroon. The Lanterns are referred to as simple in construction, strong, durable and handsome, always cool to the hand, not going out, with square lift, non-detachable basket guard and safety lock burners. The Mascot assortment includes three square lift tubular Lanterns, two dash Lanterns and one tubular Headlight, finished in hard enameled colors similar to the Brilliant assortment.

MERRIAM MFG. COMPANY, Durham, Conn.: Metal Boxes. The company's line includes Tin Boxes for safe deposit vaults, Fishing Tackle Boxes, first and second quality Cash Boxes, Bond Boxes, Mail Delivery or house Letter Boxes, and hallway Mail Boxes. These goods are described and illustrated, with prices, on a circular.

ILLINOIS REFRIGERATOR COMPANY, 909 Masonic Temple, Chicago: Illustrated catalogue and price-list for the season of 1894. The factories of this company are at Morrison, Ill., and Northville, Mich. Their specialty is the Automatic Refrigerator, whose construction and principles of air circulation are thoroughly described in the introductory pages of this catalogue. The exhaustive way in which these subjects are treated is shown by the fact that 20 pages are devoted to them, all leading points being illustrated or otherwise set forth in a manner to secure the attention and interest of the reader. The Automatic Refrigerator is built with the ice chamber at the side of the box instead of the top. Air circulation is secured by suitable openings at the top and bottom of the intervening partition, so that there are no flues whatever in the entire construction. The shelves are made of woven wire, galvanized after being made. The hardware is of genuine bronze in new designs. The Refrigerators are made of solid ash and mounted on Fox patent casters. Twelve pages are devoted to various styles of Refrigerators for general domestic uses. Then follow apartment house Refrigerators, others for grocers and hotels, Ice Chests, &c., closing with several styles of Sideboard Refrigerators of pleasing designs from small to very large sizes. The territory east of Chicago is supplied with these refrigerators by the Columbia Refrigerator Company, of Northville, Mich.

INDIANA WIRE FENCE COMPANY, Crawfordsville. Ind., have a tasty and convenient calendar with a view of the ruins of White Cross Abbey. Attention is directed to their product, which includes Plain Wire, Barb Wire, Wire Nails, Fence Staples, Wire Stretchers and Post Hole Diggers.

Trade Items.

YALE & TOWNE MFG. CO., Stamford, Conn., and 84 and 86 Chambers street, New York, will issue early in January a catalogue of the products of their new Cabinet Lock department, which they refer to as including a complete line of Cabinet Locks of every kind, size and style heretofore regularly called for by the trade, as well as a number of new and special goods. Simultaneous with its distribution the company will be prepared to furnish customers with price books containing their latest quotations. In view of the early issue of the catalogue and of the completeness of the line which it embraces they suggest that their customers defer placing orders for Cabinet Locks for the coming season until they have an opportunity to examine the work.

AUGUST KREAMER, manufacturer of pieced and stamped House Furnishing Goods, South Third street and Kent avenue, Brooklyn, has bought the plant of Peter Michels of that city, for making Coffee and Tea Pots and a general assortment of Tinware. This will be incorporated with his own factory, and to provide the necessary room he recently added two new stories on the South Third street wing, giving an increased floor space of 6000 square feet. He is about to commence the manufacture of a line of heavy planished ware of four, five and six cross tin, supplementing a large assortment of

Hosted by Google

goods already long made by him. This will include Chafing, Vegetable and Oyster Dishes, Urns, Tureens, Egg Coddlers, Rice Molds, Butter Kettles, Coffee and Tea Pots, &c. The goods made at this factory are mainly for fine trade, and, when so ordered, have the dealer's name struck in brass affixed to each piece. A full line of culinary and housekeeping ware of heavy tin, copper, sheet iron plain, galvanized, japanned and decorated is already well known to most of the largest dealers and department stores. A new catalogue, for a long time in preparation, will be issued in about two months.

CLEMENT & DUNBAR, 1129 Beach street, Philadelphia, Pa., are calling the attention of the trade to their Home and Rapid Ice Cream Freezers. The Home is a single action Freezer with an automatic adjustable scraper and white cedar tub. The Rapid is a double action Freezer with a tub large enough to allow of covering the can completely with ice without interfering with the working parts. The can, of heavy tin plate, has a solid iron cover and bottom, and is fitted with an automatic scraper which adapts itself to any difference in the surface of the can. At the bottom of the tub is a screw which raises the can, when required, sufficiently to compensate for any sag in the can, or wear in the bearings. It is claimed that the tubs are all full sized and allow of large lumps of ice being used, thus tending to hasten the process of freezing and minimize the labor incident to same. The firm are also makers of the Rapid Ice Breaker, designed for confectioners, hotel keepers, and all who use large quantites of broken ice.

A THIEF broke into the Hardware store of S. O. Burnett, 288 Fulton street, Brooklyn, on the night of the 8th inst. and stole $70,000 in bonds, mortgages, certificates, &c. In addition he took $20 in cash and a watch valued at $50. It is said that none of the securities can be realized upon by the burglar. Their loss to Mr. Burnett, however, should they be destroyed, would amount to many thousands of dollars. The securities were kept in an old-fashioned safe, which was easily broken open by the thief. Excepting the above the robber disturbed nothing else in the store, although within a few feet of the safe in a showcase were a large assortment of Pocket Knives, Tools, &c. The miscreant has not yet been apprehended by the police.

ANNOUNCEMENT is made that Manley W. McClure has retired from the firm of Brown, McClure & Wales, Boston, Mass. The business of importing and dealing in Iron, Steel, Heavy Hardware and metals heretofore conducted under the above firm name will hereafter be continued by John G. Brown and William Q. Wales under the style of Brown & Wales.

UNDER THE HEADING of "It Is Reported" in our last isssue appeared a paragraph in which it was stated that the Hardware store of A. L. Mills, Hartford, Conn., had been recently entered by thieves. Mr. Mills is, however, located in New Britain, and his initials are H. L. and not A. L. The value of the stolen booty was less than $100.

AN ENTERPRISING Brooklyn merchant recently hit on a novel mode of advertising. He purchased several thousands of high grade flat steel keys of a well known lock company, to each of which a tag with blank spaces for name and address was attached. These, with a four-page circular directing attention to many articles for sale, with prices, were inclosed in envelopes, and extensively distributed in territory adjacent to his premises. In the circular reference was made to the key, saying that 10 per cent. of the keys would fit a lock hanging just inside their door. Every one who succeeded in opening the lock would secure a neat sewing chair. In addition, all the keys entitled the holder to a chance at a handsome parlor suit then on exhibition in their window. After trying the lock the key was dropped in a box for a future drawing for the suit, the tag containing the person's name and address.

Ingenious Device for Catching Thieves.

THE Hardware firm of Foster, Stevens & Co., Grand Rapids, Mich., recently employed electricity and photography to detect a burglar. It being found that their money drawer was systematically robbed at night, W. D. Stevens of the above firm applied to the Grand Rapids Electric Company to devise some scheme by means of which the thief might be detected, and suggested what may be termed the Electro-Photographic method.

The Electric Company's efforts resulted in the detection of the thief, the method adopted being shown in the accompanying illustrations. The device as first arranged is shown in Fig. 1, the camera being so placed as to get a front view exposure of a person standing before the money drawer. Electric connection was made with the Electric Company's plant to operate the device. A burglar alarm device was fitted on the money drawer, so that when the drawer was opened the shutter of the camera operated, exposing the lens, at the same instant setting off a flash light. The night after the apparatus was first put in place the thief opened the till and the apparatus worked just as had been designed, but the thief, in order not to be seen from the street, had placed himself under the desk and drew the drawer out over his head. Upon developing the plate the following day it was found that a good photograph had been taken, though the thief was not in it. The night man was, however, arrested the following day upon suspicion, and quickly confessed all when asked if he knew that his photograph was taken when the light flashed in his face. The flash light flared up the moment the drawer was pulled out, but the thief continued his work and rifled the till. He came to the conclusion that he had been discovered, and was easily brought to confession.

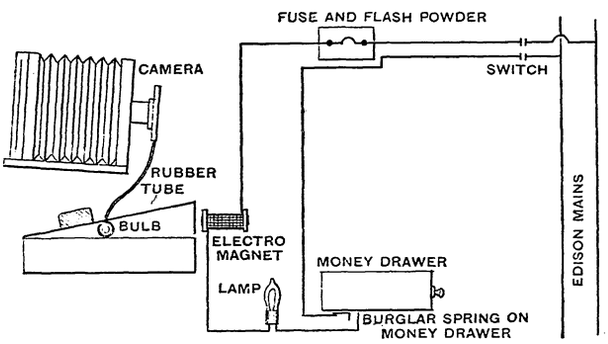

Fig. 1.—Photographic Detection of Burglars.

The second apparatus designed, as shown in Fig. 2, is referred to as working well, but no thief has yet appeared to be operated upon. The plan, no doubt, is capable of wide application, All parts of the apparatus can be so arranged as to be thoroughly concealed from the eye of the thief. An indisputable and convincing proof of guilt is a photograph of the offender, taken in the act; and the foregoing plan suggests a safe and efficient method of detecting burglars, which is capable of a wide adaption.

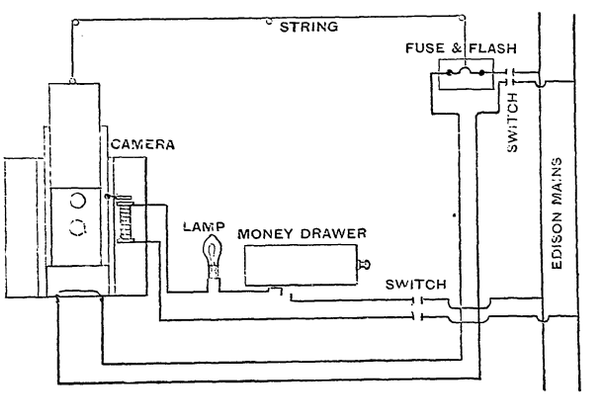

Fig. 2.—Another Arrangement of Apparatus.

Hardware in South Africa.

LETTER FROM

POLHEMUS LYON,

Our Special Foreign Representative.

PORT ELIZABETH, November 6, 1893.

To the Editor: South Africa, with its even million of white people, is growing more and more in touch with the rest of the civilized world.

Our World's Fair is certainly helping to this end. Quite a number of people have lately returned from Chicago, bringing with them not only interesting stories of the fair, but also quite an assortment of new lines of merchandise picked up in the States from exhibits made at the fair.

This is materially helped by the direct line of steamers which leave New York every three or four weeks, and make the 7200 miles direct passage to Cape Town in 30 days. These steamers do not ask any more freight charges than those from London to the Cape, and virtually take no longer in transit, so that many lines which did not interest the colonial buyer when he had to wait for a three months' sailing ship now obtain a demand, and we are put on a more even footing with the European factories. The writer has found it possible to sell several lines because of this, which two years ago would not excite interest. It is to be hoped that the steamers have come to stay, though many of the colonial merchants prefer the sailing vessels, since the more obstacles there are put in the way of importing the less crowded do they find competition. It is a fact that these steamers each bring out a number of first-class passengers, and there are at the great mining centers down here several Americans in charge of large interests, for, of course, the mining machinery in vogue is chiefly from our country.

Cape Town, with its 85,000 people, is taking a step up in the world—that is to say, two or three years ago there were but two or three buildings over two stories high, now there are half a dozen running up to five stories and several to three.

I would take much more interest in the building interests here if they would only use decent Hardware, but the Builders' Hardware in use would shame a third class tenement. They use almost entirely cheap, heavy English Rim Locks, which turn only one way and have an inch and a half brass knob. There are very few Mortise Locks in use and no Night Latches, although in this city the trade have done very well with American Rim Locks, introduced two years ago. In Cape Town they could not be tempted to handle the goods because of the light cast case, and in neither city do they take kindly to our nicely finished Wrought Steel Butts, but prefer, at a higher price, the English Cast Butt.

The building trades have done very well during the year, which helps the Tool lines, where we come in for a large share. Some day we will be able to meet the mother country on common iron goods, even as we now do on malleables, where we almost invariably score an advantage, but on brass Hardware we are out of it again.

Every day I am told of the increased effort the Germans are putting forth for colonial business. Both in Australia and throughout South Africa they have numbers of sample rooms and travelers seeking importation orders for new lines for that market. Even lately have they come into this field with Plows, which is a very large line at this port. One number of an American Plow coming here to the tune of 30,000 per annum is in popular demand from Kaffirs as well as from the Dutch and English.

But there is one great advantage all over the world in competing with goods of German manufacture—viz., that the buyer takes it for granted that they must be of very inferior quality.

Solid Nickel Utensils.

HERMANN AICH, 43 Murray street, New York, is sole agent in this country of Arthur Krupp, Berndorf, Austria. At this place are extensive works, employing, it is stated, 3500 persons, manufacturing a large line of pure nickel Cooking Utensils. While well introduced abroad, they are said to be virtually new in this market. The utensils are all seamless and guaranteed absolutely pure nickel, also acid proof. Unlike copper goods of this character, they are always ready for use, while the former must at times be retinned. With ordinary care they are said to be practically indestructible. Probably they will first be used in hotels, restaurants, clubs, institutions, &c., as upon the recommendation of chemists, metallurgists and physicians they have been largely introduced abroad in such places. They are especially recommended for hospitals or wherever food is prepared for invalids. The ware is perfectly smooth inside and has a mirror polish outside, resembling in this respect silver ware. The variety of utensils include hotel deep, medium and shallow Sauce Pots, Stew, Frying and Dripping Pans, Egg Cookers, Fish Boilers, Trays, Cups, Tureens, Gravy Boats, &c., many of the leading articles being made in from 20 to 60 sizes each. A line of the principal goods and sizes will be carried here in stock, while importation orders can be taken for anything on the list. The manufacturer is the brother of the famous gun maker of Essen, Germany.

Outfits for Venetian Iron Work.

A. J. WEED & CO., 106 and 108 Liberty street, New York, are placing on the market, in a popular form, materials for the construction of Venetian iron work. Suitable materials and the few necessary tools constitute the outfits obtainable from the company, by means of which, with designs and instructions, useful and artistic home decorations may be made. The construction of Venetian work is designed by the company for home work, as macramé lace making and scroll sawing have been, it being represented as an easy art to master, gratifying artistic taste, and one which may be made remunerative. It is also suggested that the construction of articles in the store or shop during dull seasons, designed for sale over the counter, may be found profitable. For the construction of such Venetian iron work by amateurs the company furnishes materials, tools and working designs. The bracket and candlestick, as shown in Figs. 1 and 2, will convey an idea of what may be accomplished by workers in this line.

Fig. 1.—Bracket Frame.

The bracket frame or outline is furnished by the company, or may be made by a blacksmith. The company furnish iron strips of a suitable width, and these are bent and attached to the frame in any design which fancy may dictate.

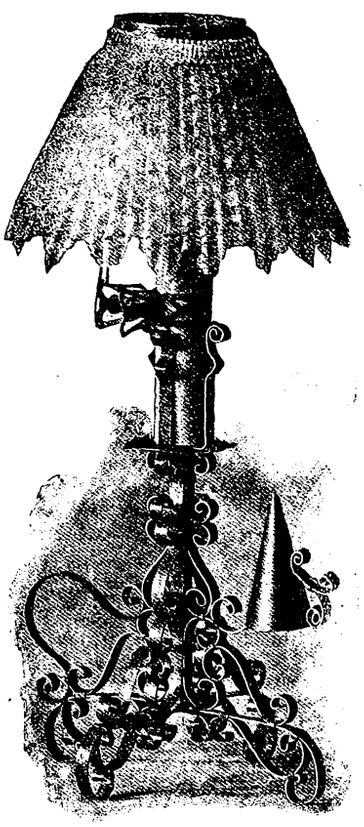

Fig. 2.—Candlestick.

For candlesticks square pieces of iron are furnished for the center or

Hosted by Google

backbone of the structure, and the strips are fastened to this in curves, angles or any other shapes desired. There is thus opportunity for much taste and skill. The cost of the materials for the candlestick shown, with the shade, shade holder and extinguisher—these three articles being furnished ready made—is 87 cents. It is estimated that about two hours' labor would be required for the construction of the article. These particular designs are only referred to by way of illustration and it is obvious that a large variety of articles can be made according to the taste, ingenuity and skill of each individual.

The materials necessary for this work, as furnished by the company, include strips of Russia iron, copper, brass and aluminum of different widths. These can be obtained in packages or made up into primary designs, as shown in Fig. 3, at a cost of from 10 to 15 cents per dozen.

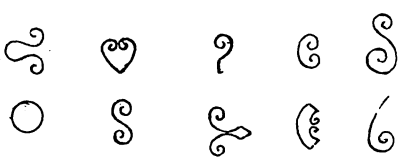

Fig. 3.—Machine Made Primary Designs.

The copper, brass and aluminum strips may be combined in designs to advantage by advanced workers either from working patterns or from original designs. Strips of the various metals are also furnished twisted, fluted, in Grecian borders and in other designs.

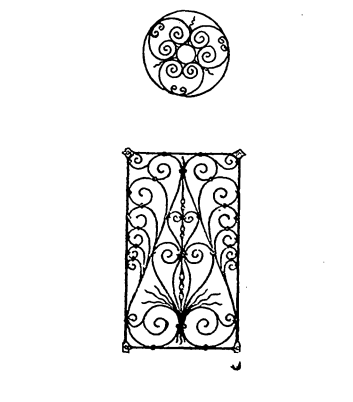

Fig. 4.—Wrought Iron Frames.

Those desiring wrought iron frames similar to those shown in Fig. 4 for windows, doorways, &c., for filling in with designs, or frames for brackets, fire screens, lanterns, &c., can obtain them in regular sizes, or frames will be forged to order from designs submitted. Working designs from which articles can be made are furnished separately, or at an annual subscription of $1 two full sized working drawings will be furnished each month. The tools required for this work are few and simple and will be furnished by the company if desired. In the construction of the different articles the strips of metal or machine made designs are fastened together with binders furnished by the company at from 5 to 15 cents per 100, according to the metal of which they are made. These are fastened by means of the binder tool shown in Fig. 5.

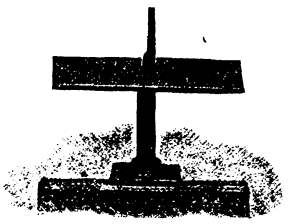

Fig. 5.—The Weed Binding Tool.

The standard of the binder tool is of machinery steel, case hardened, and the working parts are of tool steel. The binders, properly put in place with the tool, impart firmness to the article constructed. Black antique paint, furnished by the company, is used to paint the iron work after the article is completed, to give it a finished appearance.

For the convenience of customers the company put up the necessary tools and materials for making Venetian iron work in sets, varying in completeness according to the needs of the purchaser. There are three sets or outfits thus put up, known as A, B and C. Set A is the beginners' outfit and sells for $3.50, and contains all that is really necessary. In set B the tools are of a better grade, costing $6, and in addition there are several other appliances which will be found convenient, besides a greater amount of materials to work with. In set C the tools are of the best quality and everything as complete as the company's experience has made possible. This set costs $10. The following is the list, with prices. of tools and materials in set B, which is sold for $6, this being a representative outfit:

The Weed Binding Tool, for vise, with separate base	$1.25
The Weed Forming Tool	.25
Vise	.50
Iron Shears	.50
Cutting Plier	.60
Square Nose Plier	.30
Round " "	.40
Tape Measure	.10
Antique Paint	.50
Paint Brushes, per set, 3	.20
2 Hooks	.30
2 Backbones for Candlesticks	.30
Bracket Frame	.35
Package of Iron Strips, ¼ inch	.20
" " " " ⅛ inch	.05
" " Brass Strips, ¼ inch	.10
" " Iron Binders for ¼ inch.	.05
" " " " ⅛ inch.	.05
Sample of Brass Binders for ¼ inch.	.05
Wire, per spool, Iron	.05
" " " Brass	.15
6 Spring Clasp Pins	.30
2 Candlestick Bobechés	.10
2 Extinguishers	.25
2 Candle Shades	.50
2 Extension Shade Holders	.35

The point is made that there is almost no limit to the kinds of articles and designs which may be constructed with the tools and materials obtainable; and that these outfits would form an attractive addition to the line of holiday goods for sale in Hardware stores. Samples of ready made articles may be obtained from the company for display.

It Is Reported—

That G. W. Strong, Sherman, N. Y., has sold his stock of Hardware to W. H. Homewood and Henry W. Sperry. Mr. Strong will retain his interest in the sale of carriages and Agricultural Implements.

That J. C. Carter of Minneapolis, Minn., has bought the interest of his uncle, R. D. Boice, in the firm of Boice & Weidlein, Geneseo, Ill. The firm are the oldest Hardware concern in the county.

That Col. B. F. Sheets and Benjamin Knodle have purchased a Hardware store at Rochelle, Ill., of which Mr. Knodle will take charge.

That J. W. McDonald has recently opened a Hardware store at Norfolk, Neb.

That Charles Ellis, Brandon, Wis., has sold out his stock of Hardware.

That J. T. Shannon has sold his stock of Hardware at Madisonville, Texas, to Dr. W. C. Craw.

That a few Revolvers were stolen from the store of Evans Brothers, Roanoke. Va., on the night of the 20th ult.

That Fimrite & Hauge, Elmore, Minn., have purchased a stock of Hardware at Buffalo Center and are in charge.

That James M. New, Hardware merchant, Martinsburg, Iowa, has traded His Hardware store for a farm.

That the Hardware store of T. L. Burnett, Fort Worth, Texas, was entered by burglars on the 23d ult., and a large amount of Cutlery stolen, including Knives and Razors—in all about 20 dozen.

That A. Bahlke has disposed of his Hardware stock at North Star, Mich.

That a Hardware store is being erected at Wayne, Ill., for Ray Boynton.

That Mr. Bingham of Bay City has entered into the Hardware business with J. T. Harvie at Farwell, Mich.

That Burke Bros. of Ellsworth, Minn., have purchased the Hardware stock of M. E. Templer & Co., Trosky, Minn., and have removed it to Ellsworth. An opening is thus left for a Hardware store at Trosky.

That burglars entered the Hardware store of J. A. Boggs, Davenport, Neb., on the 29th ult., and stole about $30 worth of Razors, Pocket Knives, Revolvers, &c.

That Geo. H. Cutter of the Hardware firm of Cutter Bros., Meadville, Pa., shot and killed a burglar while in the act of ransacking the store on the night of the 21st ult.

That E. R. Morrill, senior manager of the Hardware firm of Morrill & Lackey, Woonsocket, S. D., has sold his interest to Fred. Dring.

That Ott & Boden's Hardware store, at West Bend, Wis., was burglarized on the 24th ult. and $150 worth of Knives and Revolvers was taken.

That in a fire at Fort Worth, Texas, on the 23d ult., the Hardware and Stove stock of Lathrop & Co. was damaged by water to the extent of $200.

That the Tompkins-Cary Hardware Company have filed articles of incorporation at Denvor, Col. The capital stock is $100,000. The directors are John Harvey, T. J. Cary, D. La Salle, H. H. Tompkins and S. H. Tompkins.

That S. H. Gay and Henry Gebhardt will soon open up a new Hardware store and Tin shop at Carbon, Wy.

That Foster & Burke, Hardware merchants, Petoskey, Mich., have bought out Williams & Carpenter, and now control most of the Farm Machinery business in that place.

Hosted by Google

That Christoper Wiemer has bought out his brother's share in the Hardware firm of Wm. Wiemer & Co., Radcliffe, Iowa.

That the new establishment of the Stratman Hardware & Builders' Supply Company, Huntingburg, Ind., is nearly completed.

That the Star & Bullock Hardware Company, Deadwood, S. D., have purchased the plumbing business formerly conducted by the Deadwood Plumbing Company.

That in a large fire at Milan, Mich., on the 4th ult., the Hardware stock and building of O. A. Kelley were destroyed. Loss, $10,000; insurance. $4000.

That Max Ludwig's Hardware store, at Pittston. Pa., was robbed on the 1st inst. Sixty dollars' worth of goods were carried off by the miscreants.

That Charles Bowen contemplates entering the Hardware business at Crooked Creek, Iowa.

That Eastwood & Chase are a new Hardware firm at Monticello, Iowa.

That William Walker, senior member of the Hardware firm of William Walker & Son, Peoria, Ill., has retired, his place being taken by William T. Wookey.

That Lindley & Morrissey have sold out their Hardware business at Edgerton, Wis.

That robbers blew open the safe in Oliphant & Newby's Hardware store, at Kennard, Ind., on the 5th inst., but secured no money.

That E. A. Jackson, who for 27 years has carried on the Hardware business at Chatsworth, Ill., has sold out to Sneyd & Burns.

That the Hardware store of D. L. Shultz, at McFall, Iowa, was recently burned out.

That L. Romans has purchased the interest of George Knight in the Hardware business at Charter Oak, Iowa.

That the Hardware firm of J. A. Marshall & Co., Manito, Ill., are putting in a plate glass front and have torn out their old office in the front of the store and built a large new one in the rear.

That the new block built for the Stambaugh-Thompson Hardware Company, Youngstown, Ohio, is now ready for occupation. It is an especially fine one and admirably adapted to the requirements of the business.

That Geo. Bowen has sold his interest in the Hardware firm of Kelly & Bowen, Lawrence, Mich., to Elvin Rowland, and the firm style is now Kelly & Rowland.

That the Hardware firm of Koch Bros., Hope, Kan., has been dissolved, Philip Koch retiring. William Koch will continue the business alone. Philip Koch has gone to Oklahoma with a view to locating and re-entering the Hardware business.

That the C. Krueger stock of Hardware and Implements at Lincoln, Ill., was sold on the 2d inst. to Frank and O. Kiest, who expect to continue the business. The stock invoiced at over $5000 and sold for a little over $3500.

That the Hardware firm of Sutton & Sharpe, Austin, Texas, have been changed into a stock company, with a capital of $20,000. Application for a charter has been filed. The following are the directors of the firm: S. K. Brown, G. C. Atkinson, F. W. Carothers, A. L. Sharpe and J. A. Sutton. Officers have not yet been elected.

That A. G. Rummel's Hardware store, on St. Clair street, Toledo, Ohio, was entered by burglars on the morning of the 5th inst. and goods taken amounting to nearly $300.

That John A. Carman has sold his Hardware store at Pecatonica, Ill., to the E. W. Lowell Hardware Company of Janesville, Wis., who have already taken possession and will conduct it hereafter as one of their branch establishments.

That J. D. Sayers has bought out the interest of his partner, J. A. Jackson, in the Hardware business at Unionville, Mo., and will for the present continue it alone.

That Mr. Adams, who for the past 12 years has been connected with R. M. Bingham & Co., Rome, N. Y., has bought the Stove and Hardware store at 174 West Dominick street, formerly owned by F. W. Clark, who will soon leave for La Porte, Texas, where he has extensive business interests.

Paints and Colors.

It should be understood that the prices quoted in this column are strictly those current in the wholesale market, and that higher prices are paid for retail lots. The quality of goods frequently necessitates a considerable range of prices.

There have been no important developments during the past week. Spot business has been slow, yet probably up to the average for this season of the year, while values do not appear to have undergone anything more than very ordinary fluctuation. Contracts for supplies for future delivery have been fair in some lines, but hardly all that could be wished in point of volume.

White Lead.—The irregularity in price that has existed for some time past continues, but no radical change has taken place. Competition is momentarily rather tame in this quarter, but advices from various other points indicate sharp rivalry and a quite general adjustment of prices to circumstances. This is particularly the case in the instance of Quick Process and various Mixed Lead.

Red Lead and Litharge.—Large consumers are manifesting little interest at the moment, presumably because of the fact that near future wants have been quite well provided for. The demand has been slow as well. Prices show no radical change, but seem to lean more or less in buyers' favor.

Orange Mineral.—Except of moderate quantities hardly any sales are making at present, since there is nothing in the general situation that would prompt liberality in the matter of buying for future wants. Sellers make no unusual effort to expedite business, however, and generally adhere to former prices.

Zincs.—Some manufacturers report a rather better run of orders latterly, but, as a whole, the market for American brands remains quiet and is bare of really new feature, prices being the same all along the line as quoted for several weeks past. On foreign brands no change in list prices has been made, but there is more or less irregularity and business continues to be on a very moderate scale.

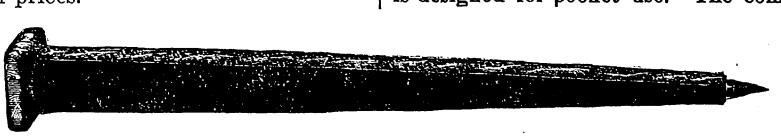
Colors.—Individual orders have been almost invariably of rather small size and it is the general report that they are hardly up to the average numerically. Competition in most lines is rather keen, and, while no radical changes are quoted, prices show weakish tendency.

Oils and Turpentine.

Generally steady markets, with rather better volume of business in some lines of goods is to be reported. Along with this is a hardening tendency to values in some instances, making, upon the whole, a condition of affairs quite as encouraging as could be expected at this season of the year. Linseed Oil stands out prominently in point of firmness in value and Cotton Seed Oils figure as the weak spot. However, the movement in values has generally been within narrow range.

Linseed Oil.—Crushers have advanced their prices to 47¢ for Raw and 50¢ for Boiled Oil, owing to higher cost of raw material. Only ordinary jobbing sales have been made at the advance, but competition is remarkably tame, indicating that crushers are working together with less friction than usual.

Cotton Seed Oils.—Under the influence of continued heavy receipts, and consequent accumulation of supply here, prices have remained unsettled and weak. There has been quite a good business, but not enough to exert much force against the weight of excessive supplies here and rather unfavorable reports from foreign markets. Sales have been made at 27¢ @ 28¢ for prime Crude, 33¢ @ 34¢ for prime Summer Yellow, and corresponding prices for other varieties.



Lard Oil.—Pressers are turning out little stock beyond what may be needed to fill orders. The latter are of good volume for the season, and prices are well maintained on both city and out of town brands.

Fish Oils.—Crude product generally has been quiet, home consumers seeming to need little, while exporters are without orders of any volume. Prices, however, are held quite firmly. Pressed and bleached stock has met with about the usual jobbing sale, chiefly at old prices.

Spirits Turpentine.—Prices have fluctuated within very narrow range, and business has been on a rather small scale. The demand has shown no radical change as compared with that of the preceding two or three weeks. Last sales were at 29¢ for regular and 29½¢ for machine barrels.

A Cut Nail Pencil.

Cross Pen Company, 168 Devonshire street, Boston, have just brought out a regular propelling lead pencil, as shown in the accompanying cut. This is made in exact imitation of a 10d cut nail, and is designed for pocket use. The company are known to the trade as manufacturers of nickel pencils made in imitation of wire nails, stove and carriage bolts, screws, &c. The point is made that the cut nail pencil is especially adapted for advertising purposes, as the sides, being flat, admit of stamping in good sized plain letters any name, business or address. The manufacturers are prepared to make quotations on this novelty for advertising purposes for the new year.

A Cut Nail Pencil.

The Delmonico Meat Tenderer.

Pullman Sash Balance Company, Rochester, N. Y., are putting the meat tenderer shown herewith upon the market. The knives are described as made from tool steel, ground to a chisel point. The plunger, as shown in Fig. 2, is taken out by removing the pin

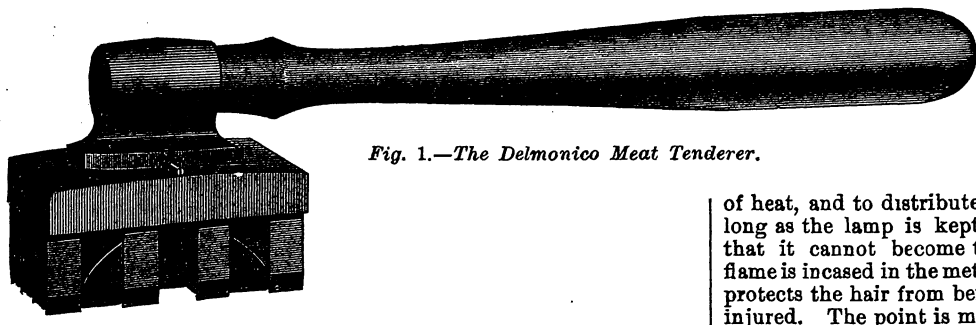

Fig. 1.—The Delmonico Meat Tenderer.

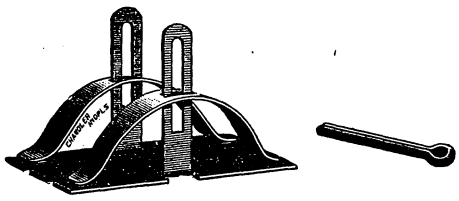

Fig. 2.—Plunger and Key.

when cleaning and washing the tenderer. The parts, it is stated, are all interchangeable and are easily kept clean. The tenderer is furnished both in tinned and japanned.

Wrought Steel Neck Yoke Center.

S. C. Johnson, Racine, Wis., is introducing a neck yoke center, as shown in Fig. 1. The center is made entirely of wrought sheet steel, with the exception of the rivets, which are Norway iron, and one malleable iron washer. The ring is lined with leather riveted in with three split rivets. The ring is riveted to the plate with a $\frac{1}{2}$-inch Norway rivet and the center to the yoke with two $\frac{5}{16}$-inch rivets. The center, it is stated, is strong, neat and durable. The centers are furnished separate from yokes, or yokes can be ordered complete, as in Fig. 2, in any style desired.

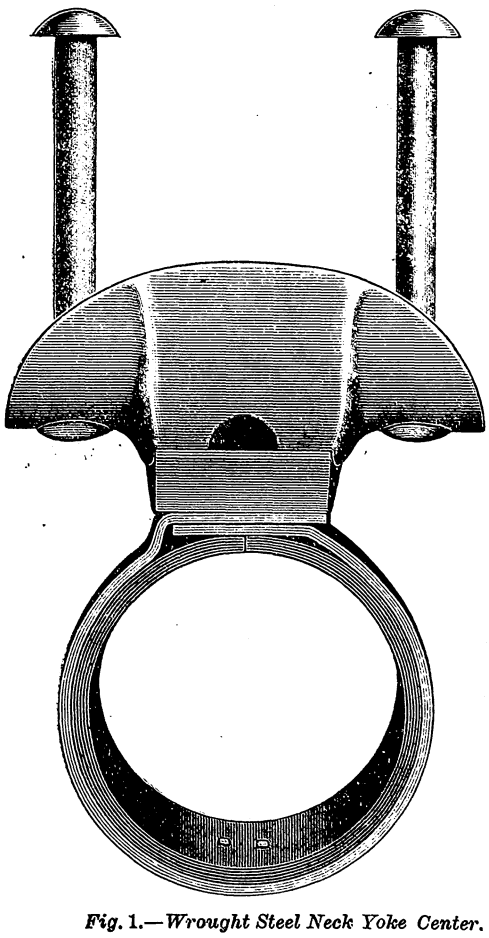

Fig. 1.—Wrought Steel Neck Yoke Center.

Fig. 2.—Yoke and Center Complete.

Unique Self Heating Hair Curler.

The hair curler shown in the cuts herewith given is being introduced by the Unique Novelty Company, 99-103 Abbott street, Detroit, Mich. The handle is of hard rubber, inside of which is a metal tube. The tube is filled with cotton, which a thumb screw at lower end of the tube permits being saturated with alcohol. As shown in Fig. 2, the curler opens by means of a hinge at the metal bulb, at which end of the handle is a wick connected with the cotton. The wick burns all the time the curler is in use, thus saving time and annoyance of reheating. It is stated that the wick is so arranged as to produce and hold the proper amount of heat, and to distribute it equally so long as the lamp is kept burning, and that it cannot become too hot, as the flame is incased in the metal bulb, which protects the hair from being burned or injured. The point is made that lamp, stand and curler being all in one piece, require no more room than an ordinary curling iron, and that by lighting the wick the curler is ready for use. The manufacturers remark that the curler is a time and labor saver at home, a great convenience at evening parties, and an addition to the traveling toilet; also that, owing to an almost universal use of the electric light in hotels, boats, on cars, &c., it has become nearly impossible to properly curl the hair while traveling. The curler is furnished nickel, silver or gold plated.

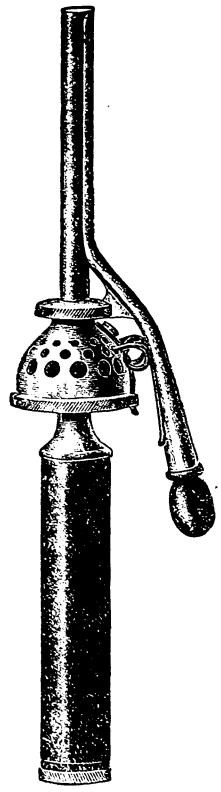

Fig. 1.—Unique Self Heating Hair Curler.

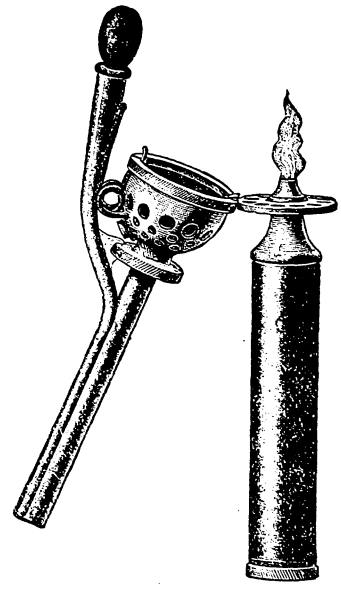

Fig. 2.—Curler Open, Showing Flame.

The handsome gift to Cornell University at Ithaca, N. Y., by Hiram W. Sibley of Rochester, N. Y., is rapidly nearing completion. It is of gray sandstone and four stories high, and is expected to be ready for the use of the students by spring. The school of marine engineering will occupy the whole second floor, with the necessary drawing apartments. The top floor will be given up to the use of second and third year students for study in machine drafting, each man being supplied with separate tools and table. The building is a model of its kind.

A New Cutlery Box.

The American Cutlery Company of Chicago have just brought out a new and attractive box, intended to hold a half dozen each of silver plated knives and forks. The new box is made of a material over which they have control, and is called marbleoid. It is of such a character that the cover is molded in one piece, with no joints, and the body of the box in another piece. The illustrations show how well the material lends itself to an attractive shape. On the inside of the cover is the company's guarantee in raised letters, while upon the outside the world occupies the center, surrounded by the company's name, &c.

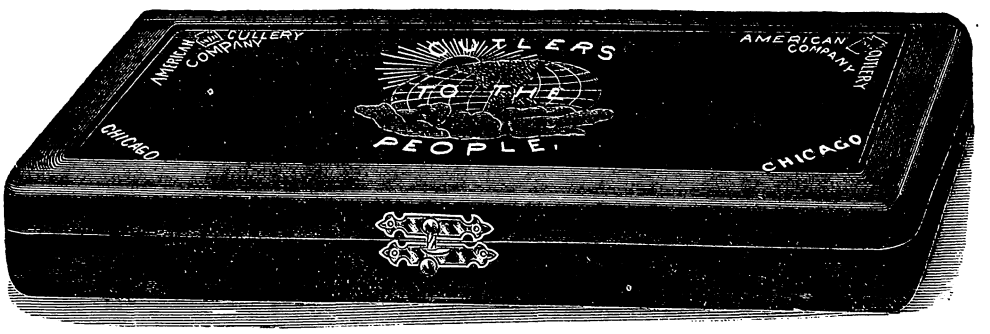

Fig. 1.—Cutlery Box.

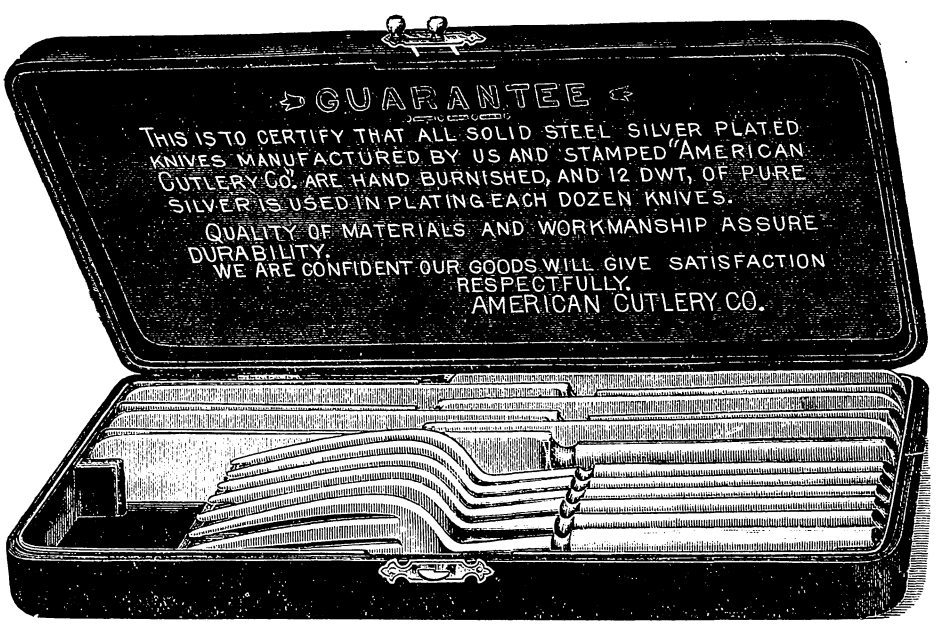

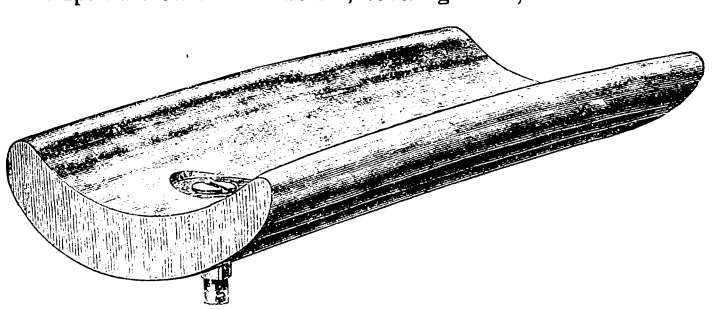

Fig. 2.—Arrangement of Cutlery in Box.

A committee has been formed for the promotion of an international exhibition on the largest scale to be held in London in 1896 or 1897.

Kingsland Wood Rim.

The accompanying illustration shows a section of a wood rim for bicycles, being offered by the Bicycle Wood Rim Company, Kingsland, N. J. The rim is described as being made of a single piece of white ash, bent and joined by a lap joint covering 4 to 5 inches; the joint is then wound with heavy linen. So confident are the makers of the strength of the joint, that the hole for the valve stem is put right through the joint, as the strongest part of the rim. The rims, it is stated, are bent naked, without protecting steel covering bands, so that defective stock is broken when it is in process of bending. A sample rim at hand weighs scant 16 ounces. The company will replace with a new rim any that prove defective in stock or workmanship, or that shall fail at the joint, within one year. The rims are made any diameter or width, and will be bored with holes for spokes, and furnished with metal washers to protect nipples, if the number of holes are specified on order. The manufacturers emphasize the fact that the wood rim is not a racing fad, but that it is the result of three years' experience on the road; that it will stand up under all conditions where a steel rim will go, and will ride faster and with more ease to the rider. An illustrated catalogue illustrates wood rims, describes the process of manufacture and explains the advantages of wood rims over steel rims. The rims are made of a single piece of white ash, and the statement is made that white ash has 12½ times the resiliency of steel.

Kingsland Wood Rim.

THE NUBIAN IRON ENAMEL COMPANY of Cragin, Ill., report their sales of Nubian in small packages almost up to former years, notwithstanding the dullness in general trade. As an evidence of the manner in which tariff agitation disturbs trade in almost unexpected quarters, the company state that they have many customers among manufacturers whose products are affected by the provisions of the Wilson bill, and who will not buy until some definite decision is made by Congress. One customer, for example, is a manufacturer of cotton ties, who uses from eight to ten carloads of Nubian Enamel annually. As cotton ties are scheduled to go on the free list, it is not remarkable that this customer is not buying materials. Others are not hit quite so hard, but prefer to wait to see exactly where they will stand, and meantime the sales of Nubian as well as other materials must suffer.

The Gardner Observation Door Fast.

An illustration is given in Fig. 1 of the new Gardner observation door fast, which is designed to take the place of the time honored chain. It is composed of two parts—the door fast, which is attached to the jamb, and the thumb bolt, which is inserted in the door. The door fast is shown on a larger scale in Fig. 2. It consists of a plate, to which a slotted piece of metal is strongly riveted at the top. The plate is set into the door jamb, so that it is not in the way. In Fig. 3 is shown the thumb bolt also, on a large scale. It has a round body, so that a $\frac{5}{16}$-inch bit makes a perfect socket for it. The end of the bolt is finished with a knob. The action of the door fast, as will be seen, is very simple. When the door is

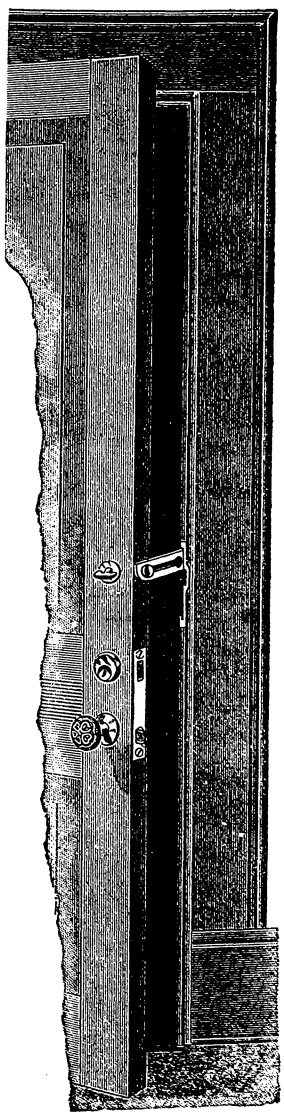

Fig. 1.—The Gardner Observation Door Fast.

closed a turn of the thumb bolt places the knobbed end into the top of the slot on the fast. On opening the door the end of the bolt pulls the arm of the fast up to a horizontal position, but the door can only be opened to the length of the slotted piece. An intruder cannot loosen it even if he is able to put his hand in and turn the thumb bolt, because the knob on the end will not slip out of the slot except at its widest part, which is only in position when the door is shut. The cut of the door fast is not perfectly accurate. The slotted piece is hung so that it will swing to either side of the plate, so that it can be used on either a right or left hand door. Its weight will always make it hang straight. The point is made that, the chain being avoided, there is nothing to mar the door wood work; also that the device is always in place, ready for instant use, and that it can be applied to any door.

The fast is made of cast bronze or brass in all finishes, and is also stamped from steel or brass and plated in all finishes. It is manufactured by G. C. Gardner, Gardner Sash Balance Company, First National Bank Building, Chicago.

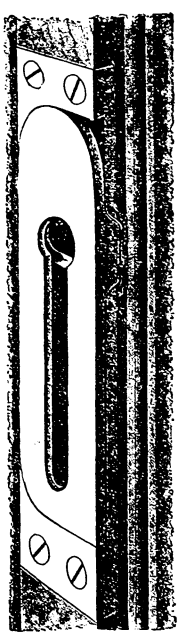

Fig. 2.—The Door Fast.

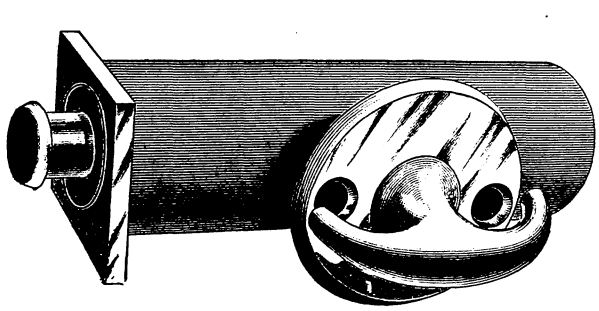
Moore's Storm Window Fastener.

The accompanying cut represents a storm window fastener put on the market by True & Blanchard, Newport, Vt. It consists of a malleable iron casting with screw slots above and below the offset. The fastener is attached from the inside to the storm window sash by means of two screws through the slots, so that the casting may be slid up and down. The fastener is pushed up as far as it will go and a screw put in the casing at the lower end of the off set, after which the fastener is driven down on to the casing screw, thus holding the sash tightly in place. The manufacturers state that the window is held in this way tighter than with screws driven through it from the outside; that the window can be put on and taken off in an instant without the use of ladders and from the inside; that the castings being malleable will stand all the driving necessary to draw as tightly as desired; that the fastener is as desirable for windows that set in flush as for those that set on the outside, and that after the fasteners have been attached to the storm window no screw driver is required to fasten the window in place in subsequent years. The New England trade will be supplied through Bigelow & Dowse of Boston.



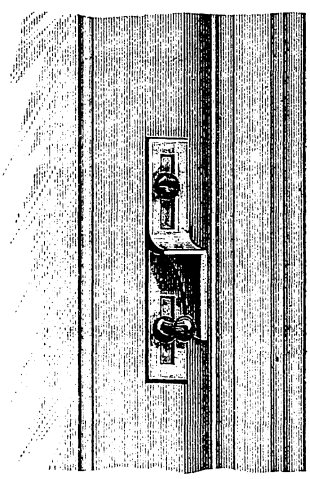


Fig. 3.—Thumb Bolt.

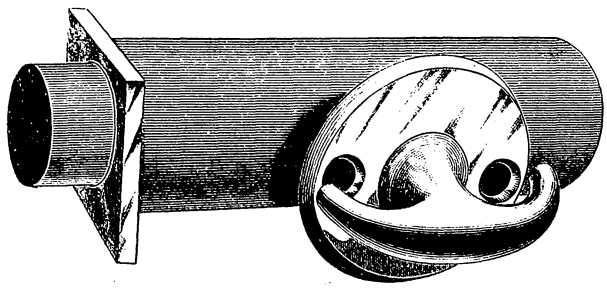
Moore's Storm Window Fastener.



The Ideal Mfg. Company, New Haven, Conn., have added to their line adjustable molds .32-40, .38-55M and .40S. Molds for .32-40 rifles make bullets in eight different weights, ranging from 105 to 210 grains. These bullets have the standard form forward of the grooves, so that reloading tools for 32-40 Winchester, Marlin or Stevens may seat the bullets properly. The .38-55M molds (.375 diameter) make nine bullets, from 158 to 332 grains, in form the same as the standard .38-55, so as to be seated in shells with any regular tool for standard cartridge, as .38-55 Marlin, Winchester or Stevens; also .38 56 and .38-90 Winchester. The .40S Sharps or Remington mold (.403 diameter) makes eight bullets, from 188 to 383 grains. These bullets are especially designed for single shot rifles, as Sharps, Remington, Ballard, Winchester, Stevens and Maynard, using .40-50, .40-70, .40-90 bottle neck, and .40-50, .40-70, .40 90 Sharps straight and Ballard shells.

The New York Board of Underwriters at a recent meeting adopted a resolution that hereafter they will decline to issue approval for electrical equipments for advertising purposes in show windows and mercantile establishments where motors are used or where electric currents are shunted or broken on different currents for display purposes.

The Gardner Door Bolt.

An illustration is given herewith of the new Gardner door bolt. This bolt is of the type requiring merely a hole bored in the door by a bit, the shell being round. The face, however, is square, so that the bolt will be fitted in place in proper position to receive the shank of the knob. The case is made of cast iron, and the bolt of brass. Its interior construction is very simple. The square shank fits in the corner of a V-shaped cam, held in position by a flat spring, so that the bolt can easily be thrown forward or backward, and is then held in position as thrown. This bolt is made in one size only, $\frac{15}{16}$ inch diameter of shell, but in all styles of hardware finish. It is manufactured by G. C. Gardner, Gardner Sash Balance Company, First National Bank Building, Chicago.

The Gardner Door Bolt.

Pullman Wrought Steel Spring Hinges.

The accompanying cuts represent spring hinges being introduced by the Pullman Sash Balance Company, Rochester, N. Y., for whom Jas. H. Robley, 142 Chambers street, New York, is agent. The Lion, or No. 1 hinge, Fig. 1, is made, it is stated, of the finest grade of wrought steel, and that the placing of two screw holes at the nearest point to the hinge part insures strength where it is most needed and prevents the hinge working loose. To obviate the binding or sticking of the joints a loose pin lug is used for holding the joints together, which is referred to as overcoming an objection sometimes found with spring hinges. It is remarked that the spring has 21 volutes, and that the coil spring is made of the best grade of steel spring wire. The hinge is made in one size only, 3 x $2\frac{1}{2}$, japanned, for either right or left hand doors. Fig. 2 represents the Conqueror, or No. 2 hinge, which is made of the same grade of material, and the joints are held together with a loose pin lug, the same as the No. 1 hinge. The manufacturers state that the strain on the coil of this hinge decreases in opening and increases in closing the door, and that the tension working automatically prevents any wear on the coil spring. This hinge is made in one size, 3 x $2\frac{3}{4}$, finished in japan.

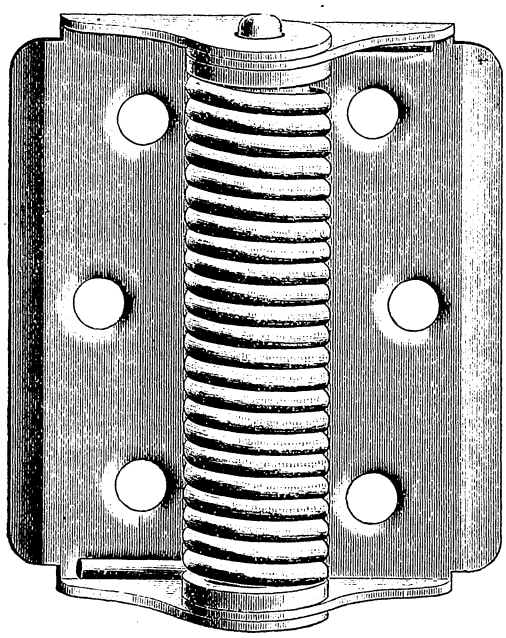

Fig. 1.—Lion Steel Spring Hinge No. 1.

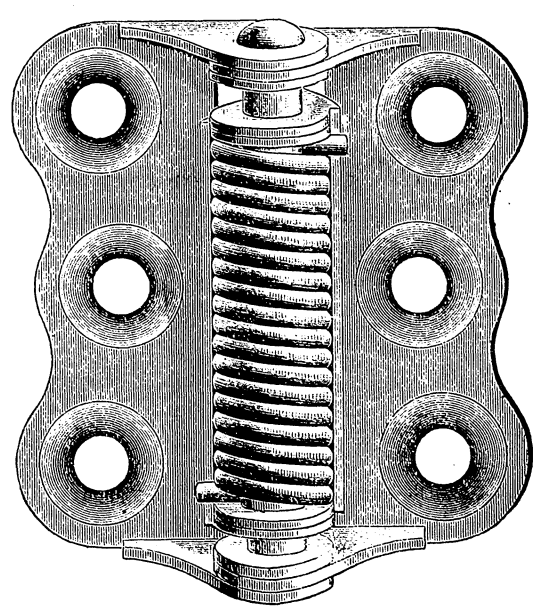

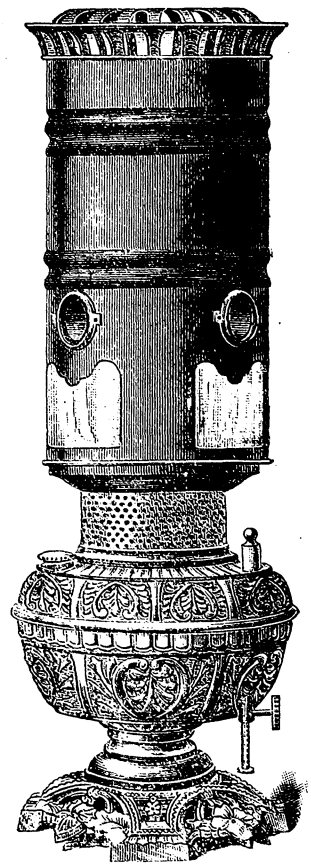

Fig. 2.—Conqueror Steel Spring Hinge No. 2.

Banner Oil Lamp Stove.

The Plume & Atwood Mfg. Company, 18 Murray street, New York, are introducing the oil lamp stove herewith illustrated. The fount and base of the lamp are nickel plated. The body of the drum is made of Russia iron, with round openings arranged to allow a continuous flow of cold air to be drawn into the flame, there to be heated and to be thrown off, largely increasing the heating capacity of the stove. The entire top lifts off from the fount for lighting, cleaning or trimming. The draft is regulated by an inside drum and side air chamber, so that no chimney is required. The flame is regulated by their Banner screw wick movement, which allows of nicety of adjustment. The manufacturers state that the fount has a capacity of about 1 gallon of oil, that it burns from 10 to 12 hours, without odor, heating comfortably at a nominal cost a room 15 feet square. The stove is referred to as especially valuable where only temporary heat is required, as in bedrooms, bathrooms, &c.

Banner Oil Lamp Stove.

It is probable that a special session of the Michigan Legislature will be called to consider measures of relief for the unemployed and destitute miners of the State. It is estimated that over $150,000 will be needed to tide them over the winter.

Current Hardware Prices.

DECEMBER 13, 1893.

Note.—The quotations given below represent, the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers at the figures named.

The character @ is used to indicate a range 'of price; thus discount 50&10@50&10&5 % signifies that the goods in question are sold at prices ranging from discount 50 and 10 % to discount 50 and 10 and 5 %.

THE IRON AGE

THURSDAY, DECEMBER 21, 1893.

Steam Driven Splice Bar Punch.

The Long & Allstatter Company of Hamilton, Ohio, are building a machine for punching at one stroke all the holes in splice bars or fish plates, or any similar work in multiple punching. The tools shown attached are for punching six elliptic holes in splice bars 1 inch thick and can be adjusted for different distances between centers of holes. The machine is under perfect control by hand lever, and the tools are easily and quickly attached and adjusted. An automatic stop brings the slide or ram to rest at any point of the stroke desired. The machine is driven by heavy steel cam shafts, provided with a hand wheel in front for setting the tools by hand. The slide is counterbalanced. The attached steam engine with governor makes the machine self contained and independent of belting and shafting. It is also provided with tight and loose pulleys for driving by belt when desired.

STEAM DRIVEN SPLICE BAR PUNCH.

The loss of life and property on the great lakes this year has been almost unprecedented. During the first ten months 53 boats, aggregating 24,258 tons, and 123 lives were lost. The value of the property wiped out during that period was $1,040,400, a larger showing than ever before recorded.

Defect in Boiler Construction.

The *Locomotive* describes a defect in boiler construction which is indirectly the cause of much trouble. In rolling plates into cylindrical form, preparatory to riveting them up into shells, it is customary to bend one end of the plate to what is judged to be the proper radius by the use of the sledge-hammer. The plate is then run through the rolls and rolled into shape, the end that was previously bent being introduced first. When the plate has been rolled all but the last 5 or 6 inches, the last end slips off of the first roll, and the rolls can no longer "grip" the sheet. The result is that the last end of the sheet is not bent to the proper radius, but remains straight or nearly so. The shell (if rolled from one sheet) has one end of it "standing off" from the rest of the shell. In order to bring the outer lap to the proper curvature, it is customary for one man to hold a sledge against the projecting edge of the lap, while another workman strikes the shell on the inside. In this way the lap is bent down into place, and after the shell has been brought to conform with the "sweep," or templet, in every part, it is ready for riveting.

Now, it will be seen that the treatment required for bringing the laps together in this manner is rather violent; and it follows that nothing but the best of materials will stand it without being greatly distressed and permanently weakened. Under the sledging operation the material is likely to be strained beyond its elastic limit, unless it possesses great ductility. The greatest strain on it comes on the outer lap, at or near the line where it touches the inner one.

If the sledging were done while the sheet is hot, it would not be so objectionable; but the great majority of boiler makers will not attempt to heat the plate before sledging the lap down, because when the sheets are hot they are apt to buckle out of shape and give great trouble. We understand that in England it is compulsory to cut off the flattened ends of the plate in order to avoid this difficulty.

It is estimated that there are 25,000 men in Detroit without employment, and their present chances of obtaining any are thought to be very slim.

Management of Men and Manufacturing Industries.

FOURTH PAPER.

A Good Boss.

BY THOMAS D. WEST.

He is "a good boss" is a term often heard expressed by employees and employers, and any one unacquainted with industrial parlance and significance often attached to expressions would be at a total loss to understand why a man called a good boss by the former should not always be considered the same by the latter.

It must be admitted there is a cause not obvious to many for the varying conception of such qualifications.

"A good boss," to be such in the strictest literal understanding of the term, is a man who will faithfully and justly perform the duties or labor for which he receives pay.

I am aware that the good book tells us "a man cannot serve two masters," but that version was not intended to refer to employers and employees, for they are not two masters for a boss to serve.

There is only one, and he is the man who purchases the product that the combined duties and labor of the boss and workmen produce, and in this light only can "a good boss" be justly considered or admitted.

Will one workman admit another to be a good man if he has not the physical power and brains to ably perform the work for which he receives compensation from his employer? Certainly not. Then why should a boss be called good who does not ably perform the work for which he receives compensation from his employer?

It takes but little thought upon this point to see there is something higher in "a good boss" than is generally conceived of.

I well know the term as applied by some means a boss that is easy, careless and indifferent to the duties for which he receives pay, and I shall endeavor to show in this paper that such men are not good bosses for workmen to even encourage, and if they are not good men for their employers as well, then they should not be permitted to occupy offices of trust and confidence.

Necessity for Proficient and Minor Labor.

In seriously considering the question of manufacture, we cannot but be impressed with the idea that in producing the product of a firm every person from the most minor to the most proficient in their employ has some influence in perfecting the quantity and perfection of the output.

This admitted, we can but in a sense consider the efforts of all essential to effecting the ends sought for, and that the services of the minor, as well as the proficient, must be employed.

Acknowledging we must have the minor and that his labors are necessary to the completion of the product, where can we justly draw the line for the master to commence and the man to leave off?

Man and Master.

Surely not at the boss, for he can only be justly numbered with the proficients and may often be placed as the first of them. His duties may be in having control and directing, but could the effort or labor of those under him be dispensed with any more than his own in producing the firm's finished product? Of course not. Rightly considered, the boss is but the proficient whose duty it is to advise, instruct and push forward the work to the end that the product can be made profitable and sufficiently perfect to be acceptable to the buyer, and who is, when we look squarely at the problem, the true master, for it is the customer that all efforts of any manufacturing enterprise must labor to please.

Blunders and Poor Workmanship.

If work is condemned or found fault with by the purchaser, every one engaged in its manufacture can generally expect to get a dressing or reprimand, the lash being first applied to the highest proficient (the manager), who in turn gives it to the superintendent, he then to the foreman, the latter to the next most responsible. They in turn send it down the line to the most minor. They all get it, the only difference being that the first lashes of the whip are most severe and cutting, and ofttimes go so deep as to cut many out of their positions.

We must now admit, and I think truly so, that employer and employee are not man and master and the efforts of the first two are so in common that no such line should be drawn, and that each is only laboring to the interest of the other in trying to please the buyer.

Mutual Interest and Responsibility.

The main difference, if any, between employer and employee is that the former is now held financially responsible for damages in every form and if the master says he will not accept work, the latter is fairly sure he will at least get his pay, though the lack of same coming to the former may result in ruining him.

The interests of the employer and employee are mutual. They should not be separated, and to clearly illustrate the justice of such an alliance we will suppose all the industries of this country to be under one management and the product only salable to one foreign nation, and not until it would accept the goods would money be forthcoming to pay the employer and expense of manufacture. Such a condition would surely cause employees to think there was something more than figuring "to get in time" necessary to insure them their wages, and seriously impress all with the true conception of who was the real master. Some may say this is an exaggeration. Even so—they cannot dispute but that the present methods of doing business embrace the same principle, the only difference being there are now thousands of managers to oversee production and thousands of masters to purchase the product, and this large division of control and territory gives more of a leeway to dispose of unprofitable and imperfect manufactured products and the employee an opportunity of being disregardful of just duties to his employer who hires him to aid in producing profitable goods that will please the buyer.

If the employee found that by careless and poor management on the part of a boss he were to suffer in not receiving his pay his conception and desire for qualification would be very rigid and much changed from that now generally found.

"A Snap."

A good boss in looking out for the interest of his employer is also looking out for that of the employee, and his goodness cannot be defined by permitting those under him to have "a snap."

He is paid for fulfilling a trust placed in him, and there are many ways in which he can exhibit goodness that will be a hundred times more beneficial to those under his charge than by permitting "snaps" or favors to a few, for as a general thing where such are found existing some are made to suffer for it.

A True Boss.

"A good boss" will not show partiality, but ever stands independent and in a position to say no or yes, or discharge any person upon the "spur of the moment" for a just reason.

He will have higher principles than tolerating clannishness, "snaps" or favors, but will endeavor to do justice to all. There are many ways in which he can dispense goodness and command respect and confidence, though apparently "ruling with an iron hand," and the writer's experience as a journeyman proved that men who were rigid, exacting, and distant with all their men were men of principle, kind to a fault and reasonable in their dealings.

Kindness to Employees.

There are always opportunities arising to give a boss chances to exhibit kindness and consideration for the welfare of those under his charge other than by permitting "snaps" and being indifferent to his duty. If a man gets injured let him see you have feeling and desire to do all in your power to relieve his sufferings. Have his home visited, and if his family require necessaries of life use all your influence to see they are provided for. If slackness compels you to lay him off with no immediate prospects for resuming work, advise and do all you can to get work elsewhere for him. In short, if you learn of his being in any trouble do what you can to help him out. Make friends of your men and get them so attached to your works that they would not wish to leave them.

These are the characteristic points, combined with using effort to seeing that work is turned out profitably and perfect, that go to making a man a "good boss" and for one I would much prefer working for a man of principle, though he might be most exacting in obtaining a big day's work than some, of the insipid, let things take care of themselves bosses that are to be found.

I well know there are bosses who are drivers and have no principle, but the march of progress is making them less every day and time will take care of them.

What is more required is to understand one another and conceive who are the real "men and masters" and what should to both sides justly constitute "a good boss," and when such elements come to be rightly recognized, then, and not till then, will we be on the right road to solve the problem of capital and labor.

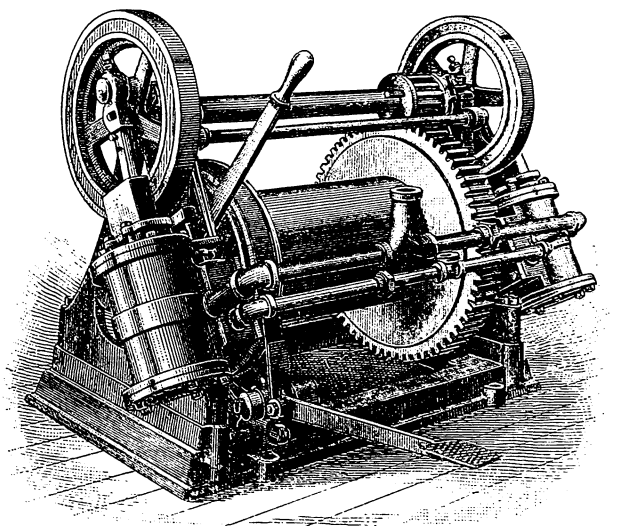
Two representatives of the Chinese Government are now in the United States studying the naval and military methods of this country.

The Standard Oil Company are about to begin a vast oil and gas operation in Northern Pennsylvania, where they have leased all the territory where surface indications of oil or gas exist.

Hosted by Google

The Lake Carrying Trade.

The following very interesting review of the results of the past season in the carrying trade on the great lakes is taken from the Chicago *Times*:



The crops of the West, the iron ore from Lake Superior region, the coal from Pennsylvania and Ohio, and the lumber from the mills were all carried by lake during the season of navigation just closed at rates which, for cheapness, have no precedent for any extended period in the history of navigation. The averages for the season are the cost prices of transportation on the lakes, and that they should be so low shows the wonderful advancement made in recent years in carrying freight by water. It is said that nowhere else have the many difficult problems of handling freight cheaply and expeditiously been met and solved with greater success than on the lakes. The season's figures go far to prove that claim.

If the balance sheets of all the boats engaged in general commerce on the great lakes could be merged into one whole it is likely that the difference between the profit and loss accounts would be infinitesimal. The larger boats of modern equipment have made from 3 to 5 per cent. on the investment where they have been lucky in catching up turns in freights and have escaped loss from disaster. The smaller boats in the general trade have had hard work to come out even, while the sail vessels in the lumber trade are worse off in every way than they were when navigation opened last spring.

The outlook when navigation opened was considered bright. There were great stocks of grain at up-lake ports, the World's Fair passenger business would monopolize the capacity of the railroads to such an extent that they could not handle coal, and the iron business was in fairly good condition.

The Straits of Mackinac had scarcely opened before the outlook for a prosperous season began to vanish. Long before the July panic came lake business was in a bad way. While the financial stringency in greatly restricting the shipments of iron ore was responsible for the disastrous period during July, August and early September, still it is likely that the excess of carrying capacity on the lakes had more to do with it. There were too many boats. For five years the shipyards had been working to their full capacity producing large and swift carriers. Steamers were built last winter of such size that four of them had the carrying capacity of an ordinary railroad between Duluth or Chicago and Lake Erie. Many conservative vessel owners have stood aghast at the tremendous increase in the capacity of the lake marine, knowing full well that as soon as the iron industry ceased booming a period of disaster would come. It did come. While winter has put an end to the wild scramble for cargoes there is no likelihood that spring will bring better conditions. There will still be more boats than cargoes, and this means cost prices of transportation, regardless of agreements, combinations or trusts which may be attempted during the winter.

Even vesselmen who have passed through the disastrous season will be surprised at the averages of freight rates paid on the principal commodities of lake traffic for the 196 business days of the season. They are as follows: Corn, Chicago to Buffalo, per bushel, 1.432 cents; wheat, Duluth to Buffalo, per bushel, 2.339 cents; iron ore, Duluth to Lake Erie, per ton, 77.297 cents; iron ore, Escanaba to Lake Erie, per ton, 56.164; coal, Buffalo to Chicago, per ton, 45.944; coal, Buffalo to Duluth, per ton, 29 163.

THE BACON SPECIAL HOISTING ENGINE.

An Opportunity for Inventors

The Metropolitan Traction Company of New York have, it is announced, decided to appropriate a sum of $50,000 as a prize to any person who shall, before March, 1894, submit an actual working system of motive power for street railway cars which shall be as efficient in speed and economy as the cable or trolley, but without the use of poles and overhead wires. The Railroad Commissioners have promised co-operation in the matter, and it is expected that the company's liberal offer will stimulate some inventive genius to devise a method of street transportation more suitable to a crowded metropolis than those now in use. The experience of the new cable cars on Broadway since their inauguration a short time ago, where traffic has increased 25 per cent., while operating expenses have decreased 20 per cent., has convinced the Traction Company that some more speedy and reliable motive power than horses is demanded by the public. As the desired system is intended for use over the entire city the cable would be inapplicable, while the overhead features of the trolley system would be so objectionable in the crowded streets of New York as to make that method undesirable. The company declare that they will exact no rights in the invention in return for the $50,000, although they do not promise to defray the expenses of experiments. This encouraging opportunity for the exercise of the large stores of inventive genius existing in this country will assuredly not be lost.

The Bacon Special Hoisting Engine.

At the Huanchaca mine in South America are 36 of the hoisting engines here illustrated, which were designed by Copeland & Bacon of New York, especially for light hoisting, in mines for underground use, as in winze sinking, &c. The engines are made in two different sizes, with double 5 inch cylinders and friction drum 12 x 21 inches, and brake, the space occupied being 3½ x 2 feet, and with double 6 inch cylinders and friction drum 14 x 24 inches, and brake, the space occupied being 3 x 4½ feet. They can be run by steam or compressed air (generally the latter is used) and when lowering the drum runs loose on the shaft independent of gearing and is controlled by a wood lined brake. Each engine is provided with a quick acting throttle valve and lubricator and is thoroughly tested before leaving the works. The flanges are deep, permitting the drum to be lagged with wood if thought desirable to increase its diameter.

Water Tube Boilers.

The following remarks, which were taken from the London *Engineer*, will be read with interest in connection with the paper by Engineer-in Chief Geo. W. Melville, read at the recent meeting of the Society of Naval Architects and Marine Engineers and published in part in *The Iron Age* of December 7, 1893:

The notable success which has been attained with their respective water tube boilers by Yarrow & Co. and Thornycroft & Co. cannot fail to stimulate the use of water tube boilers in the navy and the mercantile marine. It is stated that the two new British battleships "Magnificent" and "Majestic" are to be fitted with French boilers. Steam generators of that type have been used, it is stated, with satisfactory results, for some time in the French Navy. But we cannot think that the Belleville system is superior to that of the English firms we have just named. The French boiler is composed of comparatively large tubes, while those of Messrs. Thornycroft and Messrs. Yarrow have small tubes. The latter weigh less, power for power, and appear to be able to stand forcing better. It is worth notice that marine boilers of the water tube type have been repeatedly tried in this country with unsatisfactory results. In all cases these generators had large tubes. A few with small tubes were, however, tried, and broke down utterly. We may ask why success should now be attained. To supply the answer we must

Hosted by Google

look to the whole course and policy of marine engineering during the last 10 or 15 years. In the first place, there has been a great augmentation of pressure. Now, the greater the pressure the better chance has the small tube boiler, because the volume of the steam is reduced. Thus, roughly speaking, a bubble representing a given weight of steam will, if of 200 pounds pressure, occupy about one-fourth of the space it would fill if its pressure were 50 pounds. Again, feed water is purified now in a way undreamt of a few years ago. Grease in a water tube boiler means destruction, and it causes disastrous priming. But until comparatively the other day the feed water filter was unknown. Again, the Thornycroft boiler would be impossible unless mild steel tubes were available. Copper might perhaps be used; but we doubt that they would on the whole be so satisfactory as the very perfect soft steel tubes that can now be had. Furthermore, it is impossible to make a very light and powerful boiler unless the fires can be forced. But the whole art and mystery of forcing fires has only been understood within a comparatively recent period. Indeed, it is doubtful if it is quite understood yet.

Great as are the results which have already been attained, it remains to be seen whether they cannot be beaten. We believe that they can, and that it is possible to make even lighter and smaller boilers for the power than anything yet produced. The limit of rate of combustion has not yet been reached. Under existing circumstances it is said that about 80 pounds of coal is the maximum quantity that can be burned in an hour per square foot of grate. It is true that as much as 120 pounds have been charged; but then a very large proportion of this is simply blown up the chimney in the shape of big cinders. But it is clear that this could not occur unless the airways through which the products of combustion escape were wide enough to permit the cinders to pass. Let us suppose that instead of tubes 1½ inches in diameter, the tubes were but ½ inch in diameter, and it is evident that the passage of comparatively large pieces of unburned fuel would be stopped. It is true that ½ inch tubes cannot be employed, for one reason because flame is extinguished in them, although it is worth while to state that very surprising results may be obtained by their use with gas and with anthracite. But the Serve tube tends to answer the same end, and it is not at all impossible that much of the great saving effected by the use of these tubes when the fires are forced is due to the arrest of unburned fuel, which, with the clear tube of the same diameter, would be ejected up the chimney. It is evident, however, that when small water tubes are adopted, as in the Thornycroft and Yarrow boilers, the tubes may be set so close that nothing but very small cinders can pass between them. Unless, however, the tubes are prepared to take up the heat, they will be quickly destroyed by the tremendous temperature that must exist in a furnace driven with, say, 6 inches or so of air pressure, and this leads to the consideration of another branch of the subject.

In the water tubes of a hard driven boiler there is, perforce, not solid water, but a mixture of steam and water. The most erroneous views are unfortunately entertained about the cause of circulation; and more nonsense has, perhaps, been written about the matter than about any other technical subject that we could name. It would serve no good purpose, however, to deal with this branch of the subject now. It is enough for our purpose to say that in order that heating surface may be as efficient as possible, it is essential that it should be continually traversed by solid water in motion, not a mixture of steam and water. To secure this end is a comparatively simple thing. Let us, to avoid complication of ideas, suppose that all the heating surface is disposed in the shape of a long coil of tubing. Let the upper end of the coil open into a vertical cylinder of moderate diameter, not exposed to the heat of the fire. The working pressure will be 50 pounds less than that maintained in the coil. The upper end of the coil will be fitted with a loaded valve inside the vertical chamber or steam separator. Between the bottom end of this chamber and that of the coil is a force pump, which will continuously draw water from the separator and force it into the tube. Then its temperature will be raised, but it will practically be prevented from boiling until it has passed the reducing valve, when that proportion of it due to the temperature will, under the reduced pressure, flash into steam, the remainder falling as water, to be pumped again through the coil. There is nothing far-fetched in this idea. It has, up to a certain point, been carried out with great success by Herreshoff in America, and some years ago in this country by Mr. Yarrow. But neither attempted to keep solid water in the coil, because it is evident that the circulating pump drawing from a separator with 50 pounds less pressure per inch in it than that in the boiler would require a good deal of power to work it. But it is easy to exaggerate the loss to be incurred in this way, while the gain is certain. We do not suggest this arrangement, unless it is combined with an enormously high rate of combustion; then we have no doubt a steam generator of greater power for the weight than anything yet turned out could be produced; and it is not improbable, we think, that it is in this direction we shall have to look for the next advance. Admirable as are the results which have been attained, we do not suppose that any one, least of all Messrs. Thornycroft or Yarrow, regards them as representing finality.

Manufacturing Machine Tools.

Last summer one of our principal machine tool makers indulged in a protest against special machines that disturbed his manufacture, and this brings to mind the fact that such business has become, in this country more than anywhere else, a manufacture, also raises the question if this is not a misfortune. The result is cheapness, and no more. It dispenses with skill, and whenever some special kind of machinery is wanted, as in the case of the water wheels at Niagara, we go abroad for it. There is continual importation of special machine tools going on.

We have a good many such here in San Francisco, and when special machines are wanted, the prices quoted in these manufactories are so high as to send the order abroad. We have seen quotations of prices as two to one for certain machine tools, and even a greater difference.

There are factories of machine tools abroad, in England and Germany, for example, where merchant work is made for export, but machine shops there are not supplied with such tools. Some of the best makers in England, Messrs. Craven Brothers of Manchester, for an example, never had an engraving of their tools, and, as we believe, no trade circulars. They photograph machines when completed, and send prints to ac company tenders, but there is no regular manufacture of tools, or such uniformity as will permit engravings to be used.

The system in vogue in England, and, as we believe, in Europe generally, can be best illustrated by a typical case that occurred about 12 years ago.

The writer, who was supplying certain machine tools for wood and iron, made in this country, was requested to call on a prominent locomotive superintendent to receive instructions for a tender. "I want," said he, "a machine to bore holes in wood, and I observe that when there are to be holes of several sizes in one piece the augers must be changed and the work rehandled. I want a spindle for each auger, so that all the holes can be bored at one handling."

To have presented this officer with a trade catalogue of wood boring machines then in use would have availed nothing, except, perhaps, a courteous dismissal.

We saw at once the advantage of what he proposed, and knew also that no such machines were made at the time. Careful drawings were made for a multiple spindle machine and sent in with a specification. The result was a second invitation to call on the officer, when his remarks were in substance as follows: "Your proposed machine seems well arranged, as far as it goes, but its functions are confined to revolving the augers and moving them up and down. One man, or even a boy, can attend to this, but it requires a number of men to handle and present the timber so the augers can be set in position. Now is it not easier to move the augers laterally across the timber, and can you not assist by power the movement of the timber endwise?"

We had been designing one kind or another of wood boring machines for 20 years, and stood there before this officer, conscious of not knowing even the rudiments of what he wanted and required, but saw at once that he was correct, and a new machine was designed, with four spindles, all to traverse across the timber, and a self acting "roller bed" that would move the timber endwise.

The drawing was sent in with a specification, and in a short time came back the official order for the machine. It was constructed by Messrs. Bement & Son, now Bement & Miles, of Philadelphia, and cost about $800. This was the father, so to speak, of a numerous tribe that followed. Most of the leading makers in this country now make machines of the kind, which were, as above related, originally designed by Mr. Adams of the London & Southwestern Railway, who furnished all the "ideas" of the modern multiple spindle wood boring machine, now common in all countries.

We could illustrate the advantages of special practice by a number of instances of the same kind, where important improvements came about by a disregard of standard machines and machine manufacture. It may cheapen machines, but does not improve them, in fact becomes a barrier to improvement, so there are at least two sides to the argument. It may be more comfortable and profitable to manufacture machine tools if people can be found to buy them, but it is not a very advanced

Hosted by Google

method, or practicable with the highest class of customers who buy them.

One firm we know of engrave their machines in true elevation, to a scale of $\frac{1}{24}$, and have done so for 25 years past. This is a kind of compromise between the common trade circular plan and drawings, and has done very well, but calls for high skill in engraving to prevent a "flat" appearance. It is the old art of shading, with India ink, now quite forgotten, and replaced by photography.—*Industry.*

Basic Bessemer Costs.

F. Torduer read a paper before the Association des Ingenieurs sortis de l'école de Liége in October, 1891, entitled "Note on the Manufacture of Steel," by the Thomas Gilchrist process, in which, besides giving many interesting details of practice, he discussed very freely the costs of manufacture. Portions of this paper, with comments thereon, have appeared from time to time in the trade journals of this country.

Since there is at present no basic Bessemer steel being made in the United States it is possible that this article of Mr. Torduer's in its entirety might not prove of very much interest, but in the light of the present tariff agitation and of the fact that we may be compelled to more nearly meet the cost figures that he shows, the following notes may be of value.

While these, of course, bear directly on basic work and, perforce, contain some remarks on that particular practice, still the result in so far as labor is concerned is just as applicable to acid practice, be it open hearth or Bessemer.

In making any comparison between the work, figures and costs given by F. Torduer and the possible results on similar work in this country, the first thought is, Are his figures correct? It naturally follows, if they are correct, that due attention must be given to the difference in the rates paid for labor in Belgium and in the United States, the consequent difference in the cost of the raw materials and the variations in practice that would arise in transplanting the process to this side of the water. No sharp line of demarcation will be drawn between these divisions and they will undoubtedly overlap one another in this article. Taking them up in their order, however, as nearly as possible, the question as to the accuracy of his figures first attracts attention. I refer here solely to the rates for labor, the number of men employed, the amounts of the various supplies needed, the cost price of the same and the consequent cost of his finished material.

Mr. Torduer's costs are based on an annual production of 90,000 tons of ingots—that is, 150 tons each 12 hours. This is an extremely small output for such a plant as is here outlined. Three ten-ton vessels should turn out at least double this amount—say 300 tons each 12 hours, or one heat every 24 minutes, two vessels being in service all the time and one in repair. Such a rate of speed is perfectly attainable with "needle" or "plug" bottoms, the casting arrangements being so constructsd as to permit of slow pouring. This increase of output would tend to still further reduce the final cost Mr. Torduer has noted this point, but apparently thinks such a large output could not be sold. The natural question then arises, Why build such a large plant?

The first costs given are for unloading the stock or raw materials, and of these the first item is coal. It is possible that this is done by contract, and the price, one franc for ten metric tons, say two cents per gross ton, is rather high, especially when the low price of his labor is considered. Torduer figures on a consumption of 330 to 363 pounds of fuel per ton of ingots.

Comparing this with the best acid practice of about 200 pounds of steam fuel per ton of ingots (*vide* Notes on the Bessemer Process—H. M. Howe, Transactions Iron and Steel Institute, 1890), and remembering that the plant now under discussion is a very slow running one, the figure seems too low in quantity of fuel.

It is undoubtedly as true of the rest of his costs for unloading as it was of the coal—*i. e*, that the figure he quotes is, if anything, high for that class of work in this country, and it is therefore safe to assume that if he is not accurate he is at any rate high enough to cover a reasonable margin for incidentals. As to the quantities unloaded the lime is somewhat less than is called for in his table of costs, but not enough to cast any doubt on the general accuracy of the figures. The direct process being used and consequently only a dolomite cupola being in operation we can readily see why he expends only 6½ tons of coke.

Turning next to the list of wages furnished, the average rate per day of the men noted thereon is $0.687. *The Iron Age*, February 16, 1893, says that Belgian steel workers averaged 68 cents per day during 1891. This may be considered as a further evidence of Mr. Torduer's correctness.

Under this first item that is now being considered there remain still two questions: 1. As to the number of men employed. 2. The quantities of materials used in converting 1 ton of iron into steel ingots.

1. Excluding the men unloading the stock or raw materials, but 88 hands per shift of 12 hours are employed on the wage list given by Mr. Torduer. While this figure might, perhaps, be reached in a plant that embodied all the labor saving devices known to the steel maker of this age, there is not, I think, a basic Bessemer works extant that can anywhere near approach such an economy of labor as here shown. Of course, very much depends on the manner in which the labor accounts are kept, but Mr. Torduer shows by the titles of the positions that he has endeavored to enumerate all the various posts, even if he has not always used enough men. Two firemen, one water tender and two ash wheelers—a total of five—using poor coal is a very small number for a plant of this size. Almost every item in his labor list can be criticised in the same way. Note that only one locomotive engineer is mentioned. Are we to presume, then, that this one locomotive brings all the fluid iron from the blast furnaces, moves the ingots from the casting pit to the rolling mills and handles the bottoms between the vessels and the drying ovens? Or does the plant contain other and more economical means to encompass these and many other little odds and ends that are not mentioned, but which constantly occur in practice? One lime charger is expected to handle over 4000 pounds of lime every 42 minutes—that is to say, he must load it from the place where it has been dumped by the unloaders of the stock, move it to and charge it into the convertor. I doubt very much if one man is capable of such a feat.

No laborers, as we use the word, are mentioned on this schedule, and there do not seem to be any men on the list who could be used for lining the vessels. This is an important and expensive detail in a basic Bessemer plant, where the longest vessel lining life seldom exceeds 200 heats, the average being about 150, and it must not be overlooked in an estimate of cost. As Mr. Torduer does not furnish a sketch of the plant that he bases his work figures on, it is difficult perhaps to accurately criticise the number of men he considers necessary for an output of 150 tons of ingots per 12 hours.

2. Turning next to the table headed "Cost of Conversion," it is found that this apparently is intended to contain all items of expense and also to show the amounts used of some of the articles.

The loss of iron per ton of ingots is certainly high—16 to 20 per cent. The quantity of coal used has already been criticised. Mr. Torduer mentions in this table both dolomite and lime. There is unfortunately a certain haziness about the nomenclature adopted in the various works for the basic materials used. Strictly speaking, the term dolomite should be applied only to a mineral of the following composition: $CaCO_3$ = 54.4 per cent., $MgCO_3$ = 45.6 per cent., and calcite to a pure calcium carbonate. Since these do not occur in any large deposits in this absolutely pure condition, the names are naturally applied to stones which nearly approach the composition cited. In basic steel works, however, the word dolomite has been applied to the raw stone, whether it be magnesian or calcareous, and has again been used for the same stone after it has been "dead burnt" and prepared for its admixture with tar for use as a vessel lining. In the few cases where calcined dolomite was used as a basic addition to the charge of molten iron it was called lime, as was also the calcined calcite which later was found to be the proper material to use for this purpose.

From my reading of the text I understand that Mr. Torduer burns his material for basic refractories, called dolomite, on the spot, and charges the coke and labor into the general cost sheet, and that he buys his material for basic additions, called lime, in a calcined state. It seems probable that he has followed the practice adopted by plants conveniently situated to deposits of both dolomite and calcite, and proposes using the dolomite when "dead burnt" for the vessel linings, and the calcite, when calcined—*i. e.*, lime—for the basic additions. The amounts used are very similar to the figures given by other works and will be again noticed.

The cost price of the raw dolomite is given as $1 per ton, and of the lime (calcined) $1.60 per ton. The initial costs of these two stones when quarried are undoubtedly very nearly equal, since both must be as pure as possible in their respective ways. They are also much cheaper than in this country, but if the figures given are correct, and these are the only figures of Mr. Torduer's that I have any serious quarrel with, then the cost for burning lime, including the loss by calcination, seems absurdly low.

These two costs are the only ones that seem absolutely incongruous, and since there is no good reason for doubting that the dolomite could be laid down at the works for the figure given the onus of the error rests on the lime, except there be a very great difference in the distance of these materials from the plant, causing a marked difference in the freight rate.

Hosted by Google

For example, suppose the raw stone in both cases costs 35 cents per ton at the quarry, then:

	Dolomite.	Lime.
Cost of stone	$0 35	$0.35
Loss by calcination		.28
Cost of stone per ton of lime		.73
Fuel, labor, repairs		.70
Freight rate	.65	.17
Cost at Charleroi	$1.10	$1.60

It is only in this way that I can conceive of the figures being correct, and it may be that the local conditions are such as to produce this result.

There are other apparent errors, or false assumptions made as to the number of men required to run the plant and in the quantities of the various materials required per ton of steel, but none of these are of sufficient importance to materially alter the result, and, as previously remarked, without a more complete knowledge of the plant it is impossible to correctly criticise or revise the statements on these points.

Taking the figures given as correct the cost sheets herewith will show the main differences between the Charleroi figures (see Sheet I), the figures for a plant running single turn, using cupola melted metal and making a slightly larger output (see Sheet II), and for a plant running double turn on direct metal (see Sheet III), the latter two cases being estimated for Eastern Pennsylvania.

Sheet I.—Charleroi, Direct Process, Double Turn; F. Torduer; 150 *Tons of Ingots Each* 12 *Hours.*

Items.	Cost price.	Weight per ton of ingots.	Cost per ton of ingots.
Iron (16 to 20 per cent. loss)	$10 51	220 to 440 lb.	$2.10
Coal	1.70	330 to 363 lb.	.28
Coke	3.20	88 to 99 lb.	.144
Dolomite (probably raw stone)	1 00	121 to 132 lb.	.06
Lime (18 to 19 per cent)	1.60	396 to 418 lb.	.324
Tar, per 100 kg	1.40	1 gallon.	.084
Fire brick, sand, &c			.17
Molds and stools			.19
Black lead stoppers			.07
Sundries			.28
Railroad expenses, shifting			.02
Labor			.418
General expenses			.100
Sinking fund			.100
Ferromanganese			.300
Total			$4.644
Less value of slag			.60
			$4 04
Add cost of iron			10.51
Total cost of ingots			$14.55

Charleroi.— F. Torduer.— Unloading Stock; Labor Each 24 *Hours.*

	Francs.	Dollars.
Coal: 45,000 kg. (99,000 pounds), at 1 franc (20 cents) each 10 tons	4.50	.90
Lime: 54,000 kg. (118,800 pounds) at francs 1.60 (32 cents) each 10 tons	8.64	1.73
Dolomite: 16,500 kg. (36 300 pounds), at francs 1.25 (25 cents) each 10 tons	2.06	.41
Coke: 13,000 kg. (28,600 pounds), at francs 1.50 (30 cents) each 10 tons	1 95	.39
Sundries	5.00	1.00
Totals	22.15	4.43
Charge one-half of this to each 12-hour turn	11.08	2.22

Charleroi Wage List.—F. Torduer.

Foreman repair gang	1	4.00	.80	4.00	.80
Helpers	4	3.25	65	13.0	2.60
Total					58.20
			For	300	tons
Engineers	1	7.00	1.40	7.00	1.40
Assistant engineers	4	4.00	.80	16.00	3.20
Total					4.60
For one turn, 150 tons					2.30
Total of wages and engineers					60.50
Add stock unloading					2.22
Add Sunday labor					.255
Total					62.975

Hence labor per ton equals 42 cents.

It is assumed on the two estimated cost sheets shown herewith that 83 per cent. of ingots will be produced, 3 per cent. of steel scrap will be made and that an absolute loss of 14 per cent. will be shown.

Since the metal will be charged into the convertor colder when brought direct from the blast furnace than when remelted in the cupola, the losses are considered to be equal. That is to say that the increased loss from vessel eruptions in the direct process will equal the loss in the cupola melting of the indirect process.

It is much more essential to the obtaining of a lower loss in the basic than in the acid Bessemer process that the initial heat of the metal should be high. The basic metal, low in silicon, is charged into the vessel and immediately comes into contact with from 12 to 16 per cent. of relatively cold lime. This, of course, chills and thickens the metal and tends to produce much "throwing-out" during the first stages of the blow. The higher the initial temperature the less the loss will be at this time.

While the absolute loss may thus be the same on both sheets II and III the cost per ton of ingots might be higher on III than on II, as shown in the following calculations. It has, however, for simplicity been taken as the same, and this result could be reached in practice if a cupola for melting cheap iron scrap and rough steel scrap was run and this metal mixed with the direct iron from the furnaces. The "metal mix" for the cupolas of Sheet II is as follows:

Sheet II.—Estimate for American Plant, Indirect Process, Single Turn; 180 *Tons of Ingots, Each* 12 *Hours.*

Items.	Cost price.	Weight per ton of ingots.	Cost per ton of ingots.
Pig iron (14 per cent. loss; 3 per cent. scrap)	$12.00		$1.809
Coal	2.20	500 lb.	.550
Wood			.01
Coke	3.50	250 lb.	.437
Dolomite ("dead burnt")	10.00	90 lb.	.450
Calcite	1.10		.017
Lime	4 00	320 lb.	.569
Tar	12c. per gal.	2 gals.	.240
Fire brick			.048
Fire stone			.032
Fire clay			.033
Kaolin			003
Gannister			.024
Cupola blocks			.002
Cupola tuyeres			.001
Molds and stools			.200
Sleeves			.025
Nozzles			.005
Stoppers			.009
Shifting			.003
Insurance and taxes			.010
Stationery			.006
Incidentals			.002
Laboratory			.079
Oils, waste, &c			.030
Car account			.007
Salaries			.050
Repairs, labor			.220
Repairs, material			.070
Repairs, shop account			.033
Labor			1.600
Ferremanganese	58.50		.704
Spilgeleisen	23.00		.540
Total			$7.818
Less value of slag			1 500
			$6.318
Add cost of pig iron			12.000
Total cost of ingots			$18.318

Per cent.	Cost per ton.	
87.5 pig iron	$12.00	$10.50
2.5 rough steel scrap	10.50	.26
10.0 burnt or cast iron scrap	10.00	1.00
Total		$11.76

Since 83 per cent. of ingots are produced the cost of this "metal mix" per ton of ingots is $14.17, less credit for 3 per cent. of steel scrap at $10 per ton, $0.361, equaling $13.809.

The direct metal, on the other hand, costs $14.457, less credit for 3 per cent. steel scrap at $10 per ton, $0.361, equaling $14.096.

Hosted by Google

Since the pig iron costs $12 per ton the cost of the loss is $1 809.

It will be noticed, however, that Mr. Torduer does not calculate his loss in this way, but simply says that 20 per cent. on an iron casting, $10.51, equals $2.10. It happens that 17 per cent. loss on $12 iron nearly equals the same

Sheet III.—Estimate for American Plant. Direct Process, Double Turn; 300 Tons of Ingots Each 12 Hours.

Items.	Cost price.	Weight per ton of ingots.	Cost per ton of ingots.
Iron (14 per cent. loss; 3 per cent. scrap	$12.00		$1.809
Coal	2.20	400 lb.	.440
Wood			.005
Coke (for heating ladles, &c.)	3.50		.010
Dolomite ("dead burnt")	10 00	90 lb.	.450
Calcite			
Lime	4.00	320 lb.	.569
Tar	12c. per gal.	2 gals	.240

Ferromanganese	58.50		.704
Spiegeleisen	23.00		.540
Total			$6.944
Less value of slag			1.500
			$5 444
Add cost of pig iron			12.000
Total cost of ingots			$17.444

figure, but his is not the correct method, and I shall, therefore, use the result obtained by the method shown here. Comparing cost sheets I, II and III, but more especially I and III, it will be noticed that Mr. Torduer apparently omits the following items:

Wood	0.005
Fire clay	0.016
Kaolin	0.001
Gannister	0.010
Sleeves	0.025
Nozzles	0 005
Laboratory	0.045
Oils, waste, &c	0.025
Insurance and taxes	0.007
Stationery	0.005
Incidentals	0.002
Car account	0 005
Repairs, labor	0.18
Repairs, material	0 05
Repairs, shop account	0.02
Spiegeleisen	0.54
Total	0.941

He inserts the following three:

General expenses	0.10
Sinking fund	0.10
Sundries	0.28
Total	0.48

for which no exact equivalents are to be found on either cost sheets II or III.

The three items of general expenses, sinking fund and sundries undoubtedly cover many of the expenses that are enumerated more in detail on the sheets I present. The sum of these three items is $0.48; subtracting that from the total that has just been found ($0.941 — $0.48 = $0 461) there remains $0.461 unaccounted for in his schedule.

Considering this in the light of the low wages and the low cost of raw materials that have been noted in this article, remembering also that no charge at all is made for spiegeleisen and that the use of only about one-half the amount of ferromanganese required for the quality of steel that it would be necessary to manufacture in this country is permitted, it looks very much as though the previous assumption that his figures are correct in the main, in spite of the apparent errors and discrepancies, still holds good.

Mr. Torduer does not say that his costs are based on the use of coke or anthracite coal as a recarburizer, and in fact includes in his labor figures the men required to run a spiegel cupola; still, as he mentions the growing use of this practice, and omits to charge for any spiegeleisen, it must be assumed that he indorses it and calculates his costs in this manner.

If the amount charged for spiegeleisen in the American cost sheet be omitted, the total is $0.401, and then Mr. Torduer's three items exceed by $0.081. This difference is not great, and may tend to show that if any error exists it is on the high side.

No calculations on the cost of basic Bessemer steel should be undertaken unless the value of the slag be considered, though it is probably questionable if the full value for the slag produced could be obtained in this country at first. Any new article, however good it may be, requires some time for its introduction. This item of revenue cannot be omitted from any fair calculation of the cost of basic Bessemer metal, as it would eventually become a valuable by-product of the plant.

It is, I believe, a well known and openly stated fact, by the friends as well as by the enemies of this process, that the cost of conversion is greater than by the acid Bessemer. It is therefore only just that due credit should be given for any advantages that may be found in this method. The production of this valuable fertilizing agent, which has a world wide commercial value, and the difference in the cost of basic and acid pig irons are the two factors which should be counted on to overcome this extra expense for conversion, and perhaps possibly make it less than by the acid process.

It may also be well to note just here that no commercial estimate of the value of the basic Bessemer process for any particular locality should be formed without taking into consideration the grade of steel that is to be made. For the production of a "dead soft" steel this process possesses many advantages over the acid method.

As will be noticed on the accompanying cost sheet, the cost of conversion is for

Charleroi	$4.64
Sheet II	7.818
Sheet III	6.955

A difference of $3.178 in the one case and of $2.315 in the other.

(To be concluded.)

The absence of large orders is being keenly felt among Ohio manufacturers of iron and steel and kindred products, consequently, it is to be expected that many will take more than the required time for stock taking in January. With bar iron at 1.35 cents, half extras, Chicago delivery, and sheets, both black and galvanized, down to the lowest prices yet recorded, there is not much to create enthusiasm. There was cause for gratification over the settlement of the wages scale, but it was immediately counteracted by a lack of business in sight and the publication of the tariff bill, which has caused a great deal of complaint from all quarters. In the manufacturing centers it has put a damper on everything. No matter what the duty is, Ohio manufacturers want it to be specific; if they have to fight they want to fight fair. Whether the tariff trouble is responsible for the present dullness or not, one thing is sure—that is, that several new enterprises which had been projected and were nearing organization have been temporarily abandoned, and may have received their death warrant.

The U. S. Cruiser "New York."

The official report of the Trial Board on the recent final trial of the armored cruiser "New York" was rendered to the Navy Department a few days ago. After enumerating some minor defects of no material consequence, the board submit their opinion of the new cruiser in the following terms of satisfaction:

1. That the guns, gun carriages and turrets, their fittings and appurtenances work properly and that the ship is well built and sufficiently strong to stand the shock caused by firing. 2. That the hull, engines, boilers and dependencies have not upon this trial exhibited any weakness, breaking down or deterioration. During the two hours' trial at sea under full boiler power at natural draft the highest steam pressure was 160 pounds. The average steam pressure was 140 pounds. Highest number of revolutions, 112. Average number of revolutions, 106. The first day out the wind was of force five from the southwest, with moderate but choppy sea. The second day the wind blew strong from northwest, abating the sea considerably. Under these conditions the ship was remarkably steady, especially in the trough of the sea on the first day. Her rolling motion was slight and easy, though a good number of the crew were made seasick.

The ready obedience of the ship to her helm drew forth the favorable comment of the pilot, as it had impressed the members of the Speed Trial Board in May last; and this board is of opinion that no question of unseaworthiness or of instability will ever arise with regard to the "New York;" that, when she has been given suitable opportunity for getting into proper shape as a well-organized, well-equipped and well-drilled man-of-war, she will have no superior afloat of her class.

The mean speed at full power, at natural draft, as shown by two Bliss patent logs, was 15.84 knots. This low speed was probably due to the poor quality of the coal used, to great draft of water, and to foul bottom.

The annual meeting of the American Institute of Mining Engineers will be held at the Princess Anne Hotel, Virginia Beach, near Norfolk, Va., beginning Tuesday, February 20. John Graham, Jr., of Norfolk, is chairman of the local committee.

The Depression in Shipping Interests Abroad

In a general way it is well known that there has been widespread depression in foreign shipping interests during the past two years, but definite and reliable figures bearing on the subject are not readily accessible. Special interest therefore attaches to data carefully collected with the assistance of well-informed specialists in England and on the Continent, and laid before the Institution of Engineers and Shipbuilders in Scotland by John Inglis, the recently elected president, in his inaugural address.

Taking up first the affairs of some of the great English shipowning companies, it appears that the last year's accounts of four of them show profits, actual or nominal. Thus the Peninsular and Oriental Steam Navigation Company, with a capital of $11,298,000, declared a profit of $680,800, as the result of the operations of the company during the last year, for which a report has been submitted to the stockholders. This well established line has a fleet of more than fifty steamers, maintaining service on an elaborate system of routes connecting London with the East, including the Australian colonies. The Peninsular and Oriental Company receive an annual mail subsidy from the British Government amounting to $1,652,000 and an Admiralty subvention of $60,460. Without the money received under these Government contracts there would have been a deficit. Another important line which had a balance to its credit was the Cunard Steamship Company, with a capital of $7,792,000 but showing a profit of only $33,700. Payments are made to this line under contracts for ocean mail service and for Admiralty subventions, the annual payment by the British Government on the former account being about $245,000 and on the latter $65,700. A third line which showed a profit, although by a very narrow margin, was the Royal Mail Steam Packet Company. On their capital of $4,383,000 a profit of a trifle less than $1500 was realized for the year. The amount received by the Royal Mail Company from the British Government for mail services is about $440,000 per annum. A fourth company who can claim a profit on the business of the last year is the Shaw, Savill and Albion Company. With a capital of $2,270,000, a profit of $58,800 was shown. This line is engaged in the Australian trade and besides several large passenger steamers has a number of freight steamers and sailing ships.

Turning now to other lines, some of those which seem most firmly established have experienced serious losses in current business, a result not due to casualties in their fleets but to the depressed state of trade. The Union Steamship Company, with a capital of $3,400,000, have lost in one year $336,000. The Castle Steam Packet Company during the same period have lost $195,000, their capital being $2,450,000. Both these companies have fine fleets of steamers transporting passengers and cargo between England and South Africa. The amounts received by them from the British Government for mail service are small. Another line showing a debit balance is the Orient Steam Navigation Company, owning a number of well known steamers in service between England and the East. With a capital of $2,270,000, the Orient Line showed a loss on the last year's business of $209,000, in spite of the fact that the receipts for carrying ocean mails amounted to about $415,000. Still another important line for the business of which definite figures can be given is the Pacific Steam Navigation Company, the operations of which extend to South America and particularly the West Coast. This company, with a capital of $7,193,000 lost about $280,000 during the past fiscal year. The annual receipts of the company for British mail service amount to about $97,000.

Taking up next the two largest French steamship companies, it appears that were it not for State aid they would make a very poor showing. Thus the Compagnie Generale Transatlantique, with $7,792,000 capital and owning 167,000 tons of shipping, receive every year about $2,170,000 in subsidies and only distribute in dividends about $390,000 annually. The Messageries Maritimes have $11,688,000 capital, 202,000 tons of shipping and receive subsidies amounting to $2,698,000 a year; the sum paid annually to shareholders in dividends is about $585,000. It is estimated that in addition to the steamship subsidies, amounting to about $5,000,000 per annum, the French Government will have to pay about $1,650,000 yearly in navigation bounties under the new bounty law adopted in January, 1893. In Germany, the important North German Lloyds have a capital of about $9,740,000 and about 197,000 tons in shipping. The available profits of this company last year, notwithstanding a subsidy of $1,000,000, were only $146,000.

Drop Press and Drop Lifter.

The six-poppet drop press made by the Miner & Peck Mfg. Company of New Haven, Conn., is intended for use in stamping metal ceiling plates, metal shingles, and all work requiring square dies. This machine is made in several sizes, that illustrated in Fig. 1 being of sufficient size to take in a die 27 inches square. The method here shown of holding the square die is believed to be preferable to that of four poppets holding at the corners. The hammer is arranged to hold the soft metal by four bolts with projecting heads.

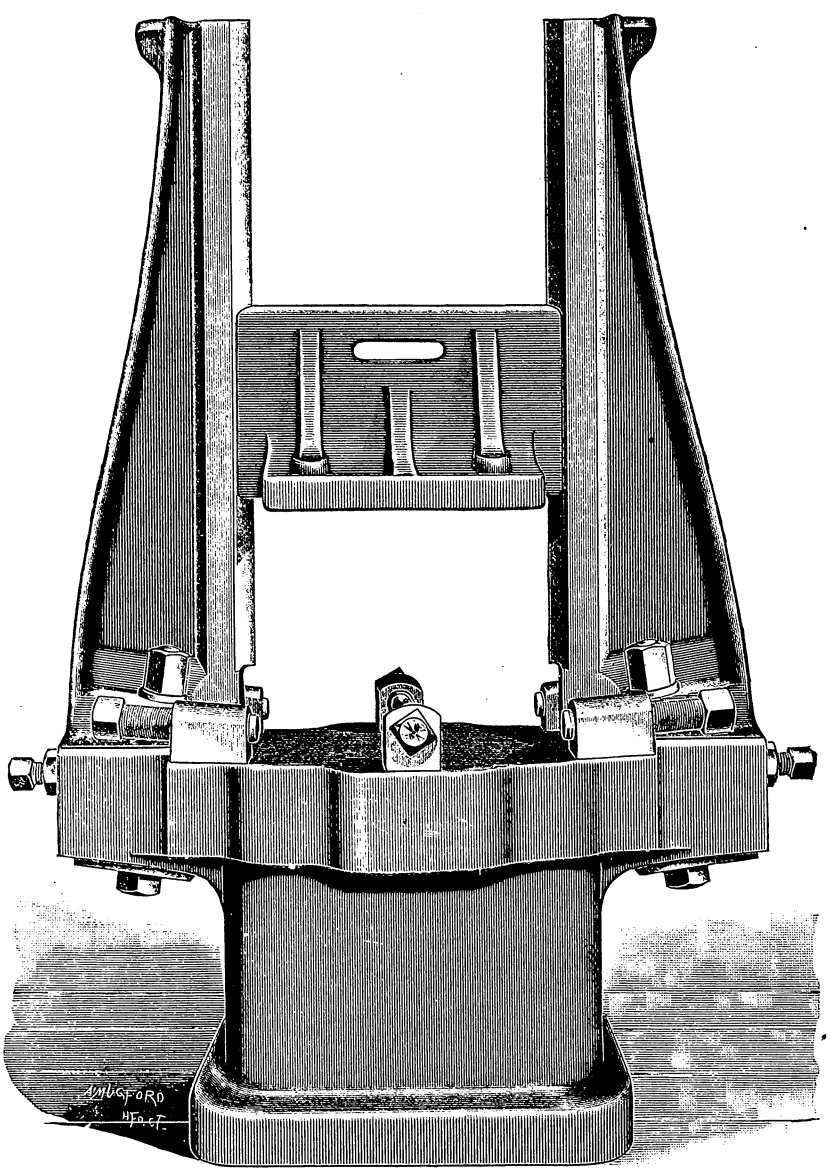

Fig. 1.

THE MINER & PECK DROP PRESS.

The poppets are fitted by the Peck improved process, are finished all over, and in such a manner that the screws have a perfect range. The holes for the poppets are bored out and poppets fitted to them and securely and accu-

Hosted by Google

rately held. The bolts for holding the guide rods are very large and have long nuts carefully fitted to insure them against coming loose, while under the heads of the nuts are large iron plates to relieve the guide rods from jar and its injurious effects.

These drops are arranged to be worked, if desired, by hand or foot power over a flanged pulley; but the manufacturers recommend that they be used with the Peck automatic lifter, shown in Fig. 2, for the reason that with this attachment much more, and more uniform, work can be produced than by foot or hand, and with less fatigue to the operator.

The frame of this lifter is of new design and is much heavier than the earlier forms. The length of the bearings has been increased, and on the main shaft, instead of making back bearing smaller, as in the former pattern, it is continued through of the same size as the crank bearing. Instead of having collars on the shaft at the bearings, the hubs of the lift and the dog cranks are made to act as collars, thus leaving the shaft of one size its entire length, with no shoulders to weaken it.

The strength of the gear and pinion has also been increased. The pillow blocks on the back of the shaft are bushed, these bushings being of uniform size, so that new ones can be inserted when the others become worn. In the place of cup screws, tapped into the frame to hold the main bearing caps, bolts are passed through the frame and held with check nuts. In the larger sizes the makers prefer not to have the sockets divided and with rubber springs inserted in the flanges, but to insert a rubber cylinder in the cavity in the hammer under the lifter belt. This arrangement has the advantage of allowing the pinion on the back shaft to be placed in the center of the back shaft, instead of at the end next to the bearing; and, thus arranged, should any extra strain accidentally come on the pinion, the shaft will spring and relieve the frame, whereas if the pinion is close to the frame an extra strain, such as the breaking of a tooth of the gear or the pinion, would be liable to break the frame. The crank illustrated is provided with fine adjustment, designed for silver and other fine work, and enables the blow to be changed in length by half inches. This form of crank is placed on lifters only when specially ordered. The shafts are made of hammered crucible steel; cranks, ratchet and dog of forged steel, and all the other parts of carefully selected materials.

These machines are now in successful operation in the stamping works of Lyles & Mills, 231 William street, New York.

A Curious Occupation.—In the cost accounts of South Staffordshire, England, rolling mills there is an item which finds no place in similar accounts in this country. It appears on the credit side, and represents the amount paid by an individual known as the "breezeman" for the privilege of hauling away, without cost to the company, the cinders falling from the grates of furnaces. The consideration is usually about half a crown for two weeks for each furnace burning lump coal, and it is further agreed that the boiler ashes be removed free of cost, although they have no value. The cinders from the furnaces are taken by the breezeman to an open space, where they are spread on the ground about a foot thick. Women who are employed for the purpose then rake out all the clinkers and bats, leaving nothing but dust and partly burned cinders, which are still combustible matter. This is wheeled to a large tub with water running through it, and dumped therein. The water is agitated by means of a long rake, and as soon as the dust is washed off and the black cinders float on the surface of the water they are removed with a large sieve of about 1-inch mesh, and at once become a marketable fuel known as "breeze," used extensively in the shops where hand made nails are wrought into shape by women, and in shops making light axles, &c., also in all blacksmith shops. It meets with a ready sale, and carts having huge sideboards, containing breeze, are a common sight on the roads between Birmingham and Dudley. The "breezeman" derives his income from the sale of breeze, less the amount paid to the company for the privilege and the cost of labor. Usually he makes a good living. He rents the furnaces for a year and takes chances on having a large stock on hand on account of nailers' or axle makers' labor troubles.

It is stated that at several Lake Superior mines men have freely offered to go to work for their board alone. This has certainly been the case at many of the lumber camps in the mining country. Some time ago the Chandler Mine on the Vermillion range took off a steam shovel that was loading cars from stock pile and put in its place a gang of men. Figured on the steam shovel basis the pay of the men was to be 50 cents a day and possibly a trifle more later. On the announcement of work at this wage over 200 men—four times the number that could be worked—rushed down to the stock pile, grabbed up shovels and began to handle ore. It was with great difficulty that the mine management was able to cut this zealous crew to a size that could do work to advantage. It is evident enough that there is no unwillingness to work on the part of these idle and starving miners on the Lake Superior ranges.

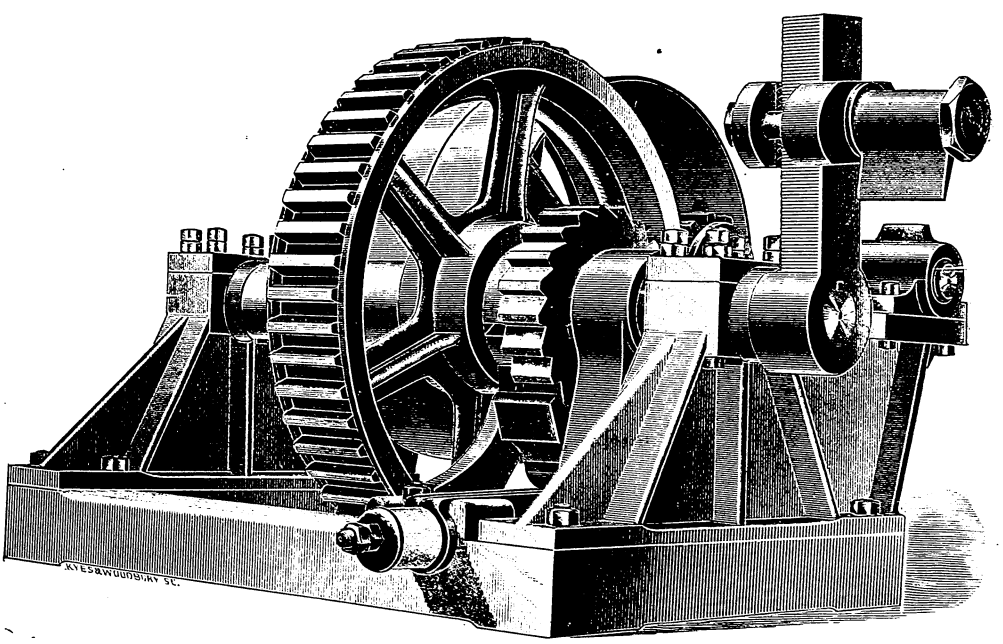

Fig. 2.

THE MINER & PECK DROP LIFTER.

The fine exhibit of steel made at the World's Fair by Singer, Nimick & Co. of Pittsburgh has been removed to the office of W. E. Stockton, their Western sales agent, at 16 and 18 West Lake street, Chicago. The special features of this exhibit was that a very great variety of specimens were shown of small tools, drop forgings, parts of machines, hardware specialties, skates, &c., made by numerous manufacturers from the company's steel. In no better way could the reputation of this steel for fine work have been demonstrated. The specimens thus shown fill two large glass cases.

The Tesla Engine.

At the last meeting of the New York Electrical Society Nikola Tesla delivered an address, from which we take the following:

You have seen a few designs of engines described by the eminent speaker who is one of the most competent to talk on the subject, and who has shown us a great many complicated mechanisms. They are exactly adapted to illustrating what I have to say, and I would ask whether it is not worth while to attempt to simplify those mechanisms, which we have been using heretofore for the production of electric currents. When we look at a steam engine and inquire where the power comes from that drives the steam engine, we will always find that the power comes from a little box—a cylinder with a piston in it—and all the other appurtenances are really but to keep it going. You may do away with the fly wheel, with the cross heads, with the eccentrics, with all the appliances, provided that you can in some other simple way govern the motion of the mechanism. So then my first idea was to apply the motion of the piston, which is freely movable, to a magnetic field, to move a magnet or a coil in a magnetic field and so generate currents by this direct motion. Now let us see what we can do in that respect. First, we reduce the weight of the engine for the same pressure and the same piston speed to one-thirtieth or one fortieth if not one-fiftieth of its weight. Furthermore, we do away with all mechanical frictions. The engine designed according to my ideas has a mechanical efficiency of 99¾ per cent. Now, that is in itself a very big item and renders it worth while endeavoring to make this mechanism a commercial success. But there are other far greater things. You will find that engineers often say what an advantage it is to apply the direct motion of the steam piston to a pump. In reality the advantage in a pump is but a very minute one. The water column has got an enormous inertia, and what we do gain in the direct acting pump is merely a matter of overcoming some additional frictions which we have in the ordinary engine. We may take the mechanical efficiency—I gather the data from various works—we may take the efficiency as say 81 to 82 per cent. at the full load. But the efficiency is much less on a varying load. Then, furthermore, we have got these variously estimated. I take the figures which I have found to be fair, giving this as the efficiency. Now the dynamo again has got mechanical losses due to friction, and, furthermore, the wire is never utilized fully in the dynamo. In my construction the dynamo may consist of a simple coil of the magnet, and a simpler coil, which is all immersed in the magnetic field. There is no useless wire. Consequently dynamo and engine, if they are reduced considerably in weight, increase in efficiency. There is only one engine which can equal it in output, and that is the turbine. With the steam turbine we can obtain an enormous output, and that is the reason why the steam turbine, in my opinion, may be found a valuable adaptation for driving dynamos; and then convert the motion by means of alternating dynamos; and I think the steam turbine has in itself a physical cause why it cannot surpass a certain efficiency, and that is that we drive turbines by impact. A turbine might be very efficient if the medium which propels it were incompressible and homogeneous. But it cannot be efficient if we drive it by means of isolated shocks. Furthermore, we cannot in a turbine gain all the expansion. These causes, I think, will limit the efficiency obtained in turbines. But in reciprocating mechanisms we can, provided we obtain a sufficiently high speed of the piston, expand the steam at an enormous rate. It is perfectly practicable in these mechanisms which I have been working up to obtain, if you want, a speed of 100 meters a second, and while I do not contemplate producing such speeds yet it is quite possible to do it. But since we can produce higher speeds we might as well increase the speed two or three times, and so augment the activity of the mechanism and raise the efficiency. Furthermore, as I am enabled now to work without a packing, I found that in these mechanisms the packing is actually objectionable, the expansion occurring at an enormous rate, and the engine being of such character that the exhaust can be reduced to pretty nearly the atmospheric pressure very easily. The mechanical friction is reduced to such a small figure that we can raise the temperature of the steam very considerably. You know that in high pressure steam engines one of the greatest troubles is the lubrication. We can go so far with the mineral oil, we can go so far with ordinary oil, but then we reach a point at which we cannot go any further; the lubricant will not work; and I am informed by very able practical engineers that about 250 pounds per square inch of steam pressure is as high as we practically go. With this engine we can go much higher. I am now preparing a boiler which will give me up to 350 pounds pressure. It is very important, of course, to get the pressure very high. In these mechanisms we are confronted with two things. For what are they going to be used—for light or for power? If we want to drive motors we must have a long stroke and a slow frequency. If we want to operate lamps then we want a very short stroke and a very rapid motion. To have a high speed with short stroke we must have a great initial pressure, because, you know, the number of vibrations increases only as the square root of the pressure. So if we want to have twice the number of vibrations we must have four times the pressure. But, on the other hand, four times the pressure and twice the number of vibrations means eight times the output. So it is very important in this mechanism in which the power depends on the square to obtain as high a pressure as possible. It is on this line now that I am working.

We have had such reciprocating engines as far back as 1868 or 1870, and it would be a very erroneous idea to think that I had evolved something radically novel in that part of the mechanism.

It is more economical to produce rapid vibrations than low vibrations. But so far as the economy of the dynamo is concerned, and so far as the economy of the engine in general is concerned, it is better to produce a long stroke, because a long stroke means a high velocity.

I have an apparatus which runs lights in the laboratory, and shortly I think I will have something which will be ready for practical application. I think I am not mistaken in believing that we are going to have very shortly a means at hand of producing twice as much electricity from coal as we can produce at the present time—provided I am not mistaken. This is subject, of course, to a test, but I am quite confident that it can be done. This is not, however, a subject which occupies me altogether. There are also other subjects.

The Consolidation of Mexican Iron Interests.

The newly organized Mexican National Iron & Steel Company, with a capital stock of $3,000,000, are now in complete possession of the iron and steel plants and deposits formerly controlled by the Durango Iron Mountain Company. A temporary organization was effected on November 18, and the permanent organization with regular election of officers will be accomplished on January 1. Mr. Richard Honey will be president, but the other officers are not as yet definitely fixed upon.

The object and plan of the new company is to operate not only the mining of the vast deposit of ore at Durango, but to put in complete working order various manufacturing establishments already built at various points in the republic. The desire is to operate to the best advantage and interest of the Republic, and decrease rather than increase the price of iron used in Mexico. In an interview given the correspondent of *The Iron Age*, J. S. McCoughan of the company stated that his party can do this, if the Government of Mexico will do its part.

He professes that he and his company are willing that the import duty on iron ores be very materially lowered, if the authorities will then but stand by the standard rate of duties and treat every one alike.

By over $200,000 spent in improvements last summer and fall, the Durango home plant now represents an expenditure of $600,000. The improvements just made consist in the remodeling of the blast furnace, the addition of a hot blast stove and a 600 horse-power blowing engine, and other additions of a minor nature to the already large and very complete plant. In addition, the new corporation are making ready to begin the manufacture of light road rails, I-beams and various kinds of structural iron for the supply of the building trade. About 200 men are now employed at the Durango Works, and this number may possibly be increased in time.

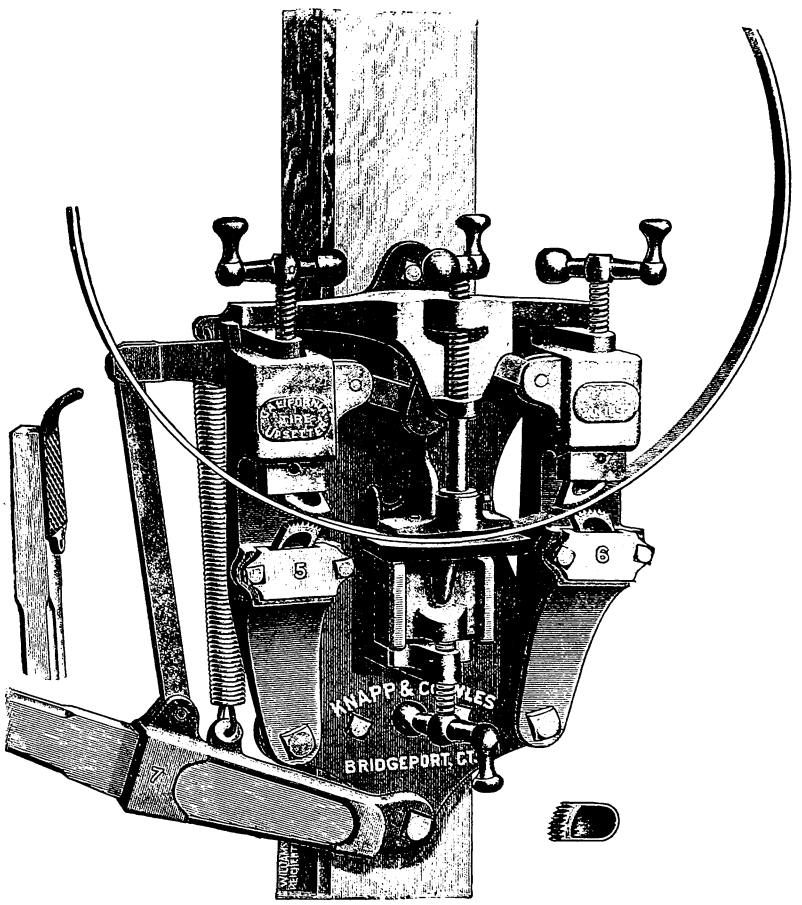
Next year enlargement will be made of the company works at San Miguel, in the State of Hidalgo, and the steel plant there specially put in order for large operations at a total expense of $500,000. The plant at Encarnacian is running exclusively on charcoal bar iron, which is equal to Swedish goods and is making for itself a good place and fine reputation in the iron trade.

The above and all the other works of the company in the Republic, including those at Acapulco, are to be steadily operated and worked to their full capacity of production in the future.

Shipments from the deposits of Durango and other mines owned by the organization will also probably be increased. Four hundred carloads of iron ore were shipped out from Durango last summer, going to Monterey, San Luis Potosi, San Miguel, Allende and other points. If the import duty on iron ore were removed in the tariff revision now being figured on by the United States the lead smelters of Kansas City would be added to the shipping points. Ne-

Hosted by Google

gotiations are also on for shipping large consignments of ore to Europe via Tampico.



By the plans in the mind of the company, which have ample capital to carry them out, the famous Iron Mountain of Durango, which has been worked for 50 years with no particular loss to its mammoth storage of mineral, will send out an increasing amount of its valuable body to the world of commerce.

The Durango formation is claimed to be the largest deposit of iron ore in the world, and has been noted as such for hundreds of years. The Iron Mountain was given extended mention by Baron von Humboldt when traveling in Mexico in 1803, and has been the subject of much attention in the later years of the century.

The collapse of the great bridge now under construction between East Louisville and Jeffersonville, Ind., which occurred last Friday, was one of the greatest disasters of the kind experienced of late years. The accident was caused by the strong current and heavy wind carrying away the iron and timber false work of the 500-foot span in the middle of the river, the fall of which brought down the other spans with it. Many workmen were drowned or buried under the falling mass of *débris*. The structure was the work of the Phœnix Bridge Company of Phœnixville, Pa., and was being erected by them. Every precaution had been taken to prevent disaster, and it is stated that the company have received a dispatch from the engineer in charge of the railroad for which the bridge was being built, exonerating them from all blame.

The California Tire Upsetter.

With this machine, which is made by the Knapp & Cowles Mfg. Company of Bridgeport, Conn., tires can be shortened without cutting and without the use of a hammer. To operate the machine the center plate is lowered to conform to the circle of the tire, which is placed in position as shown. The center plate is then screwed down so that the jaws firmly grip the tire. The toothed jaws 5 and 6 are then adjusted properly to grip the tire when the lever 7 is depressed, thereby bringing, by means of the connections shown, the gripping jaws toward each other and upsetting the tire. If the first compression is not sufficient the left hand screw is loosened, the lever raised and the screw retightened. In this way two or three compressions can be obtained at one heat. Bar iron can be upset by adjusting the center plate in line with the work.

THE CALIFORNIA TIRE UPSETTER.

A proposition is advanced to reopen the Charlestown Navy Yard. The resources of this yard are such that boats of comparatively small size could be built there, and much repairing could be done. A few years ago, through neglect or inattention, the Charlestown yard was allowed to get into bad condition and it was necessary to make a number of repairs before vessels could be kept at the docks there. For this reason the Navy Department declined to send ships or to build them at that port; but at last the docks have been put into good condition again, under an appropriation made by the Government for that purpose, and there is at present no good reason why the yard should not become what it formerly was, one of the most important Government work yards for the navy to be found on the Atlantic seaboard.

San Francisco News.

SAN FRANCISCO, December 11, 1893.

During the past two weeks we have had the first heavy rains of the season. In fact, the rains were pretty constant for one week. These rains have put the ground in good shape for the labors of the farmer, and there will be a goodly breadth of land seeded to wheat and barley, with the promise, should later rains be sufficient, of bountiful crops. Everything, therefore, favors the outlook of the agriculturist—everything except the prices of produce, and there is no reason for hoping that they will be any better next year than now. Farmers are disgusted with the prices that they have received during the year—in the case of wheat, the great staple of California, 16 per cent. lower than ever before in our history. Farmers and jobbers have been waiting, hoping against hope that prospects would brighten and that prices would improve, but they have not. It is just possible that fruit will command better prices in 1894 than it has done this year, but agriculturists are not sanguine, and, therefore, I do not expect any marked revival of trade before next fall. In the city the demand for building hardware has fallen behind that of 1892 for the same time, although there are nearly as many buildings being contracted for as there were a year ago. In other departments the demand is very light. There is but a limited demand for machinery at present and a decided dullness is prevalent. The demand for agricultural machinery has about come to an end for the year. Here the outlook is probably about as good as that for any preceding year. It is true that the great houses of the city have saved a good deal in the matter of freights when compared with what they used to pay, but lower prices have taken all the profit out of the business. The lowering of freights has led to the lowering of prices, and not only on goods, but right along the line. In fact, in many departments prices have been absolutely down to cost, and less money has been made than there was in 1892. Happy where the importer has not fallen behind, and where he was always able to get a new dollar back in exchange for an old one. But all our houses are possessed of abundant capital, and well able to stand financial strains and the pressure of hard times. They have made money in the past, and when a change takes place they will hardly even remember the dull year of grace 1893. As noted, the reduction in freights was in one respect disappointing, as it brought goods here at low rates to compete with stocks already in the market; but it will add to the field for San Francisco's trade, and its beneficial results will be felt even a score of years from now. The year 1893 will be pointed out by our mercantile historians as the one when the chains of railroad and steamship were first broken by the combined efforts of the banded merchants of San Francisco. The Clearing House exchanges are a pretty fair index of the conditions of trade amongst us. For the week ending Saturday, December 9, they were $12,546,474, as against $16,661,619 for the corresponding period in 1892. Here is a falling off of about 25 per

Hosted by Google

cent. in volume of trade, and it is just as true in hardware, iron and steel, machinery, &c., as in aught else. Of course as in hardware, nails, &c., there have been reductions in price. The quantity of goods disposed of has not fallen off so much as the above would seem to indicate.

There will be a very fair display of machinery, hardware, &c., at the winter fair in this city. Some of our manufacturers of machinery are making preparations for a very large display, and here the East and the West will be able to compare notes and each to benefit somewhat by and learn somewhat from the other. Our largest manufacturers and importers of agricultural machinery are contemplating making a display that shall cost thousands of dollars, so that Eastern manufacturers must needs look to their laurels. All their fair buildings have made good headway and by January 1 will probably be ready for the reception of exhibits.

There have been no particular changes in prices in any line since my last letter. As a general rule it may be said that there cannot be any advance, as competition is too keen, while quotations are too low to render it possible to effect a reduction except at a loss. Pig iron keeps at $18 to $22, according to quality; nails at $1.65 as a basic price; tin plate at $5.50, and pig tin at 21¾ cents.

The Ironton Structural Steel Company of Duluth, Minn., have just made a successful test of their new principle of structural beam rolling machinery, and have accomplished a result that is entirely novel in the history of steel manufacture. A 24-inch steel beam 30 feet long was rolled by a single set of rolls in one operation and without removing the billet from the original rolls. The beam was rolled from a steel billet 37 inches long, 30 inches wide, and 7 inches thick in 15 passes through the rolls. It is a standard section, 80 pounds to the foot. A few weeks ago a 15-inch beam was successfully rolled by the process, which is the invention of James E. York, general manager of the works. The mill is constructed on the universal plan, with sets of horizontal and vertical rolls, capable of being adjusted so as to turn out varying sizes and thicknesses on the same train. It is claimed that the cost of turning a steel ingot into a finished beam is reduced 40 per cent. by this process. There is only one other firm in the United States capable of rolling a 24-inch steel beam, and there the work is done by the ordinary process.

A new forge shop is to be built and equipped for the North Carolina Agricultural and Mechanical College, Raleigh, N. C. This institution is referred to as meeting with great success.

One must go abroad to learn what is going on at home. The London *Engineer* prints a long leader on President Cleveland's tariff message, and in the course of its wise review remarks: "In the United States almost every 'interest' is controlled by a 'ring,' and the system has been pushed to lengths which are almost ridiculous. Thus, for example, a 'ring' was formed to control nails. But nails are sold in kegs, and very soon after the nail ring had been formed a keg ring was established, on somewhat antagonistic principles." The nail manufacturers in this country dissemble well. While they are industriously losing money in cutting nails, they are paying tribute, too, to the "keg ring." Since our nail manufacturers make their own kegs, they have probably gone into this "ring" for the amusement of their bookkeepers.

Vacuum Breaker.

When a back flow of water from a condenser occurs all passages up to the check valve are filled with water, and before the condenser can resume its proper function the water must be discharged. A discharge will naturally take place as soon as pressure in exhaust rises above atmospheric pressure, but this in itself may be too much of a disturbance to the regular running of the engine, and may necessitate several revolutions to recover regular speed by the change of condition. To effect a prompt discharge of this water the vacuum breaker shown here has been designed by L. Schutte & Co. of Philadelphia.

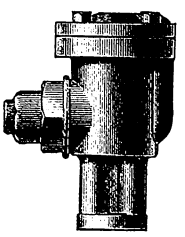


Fig. 1.—Perspective View.

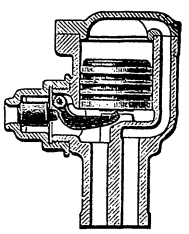

Fig. 2.—Inside View.

Fig. 3.—Fitting.

Fig. 4.—Fitting, Sectional View.

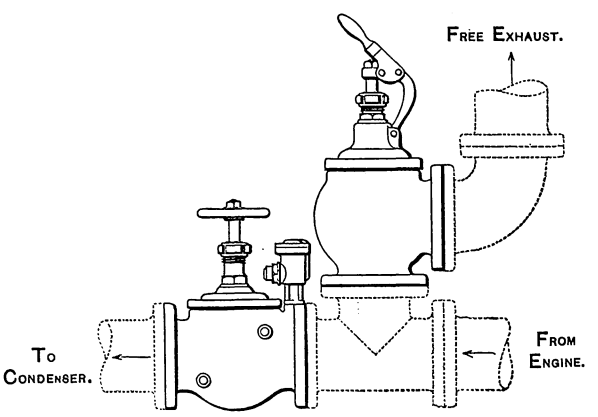

Fig. 5.—Check Valve with Vacuum Breaker Attached.

VACUUM BREAKER.

As will be seen, the vacuum breaker consists of a valve closing against the atmosphere and actuated by a piston. A passage below the piston communicates with the condenser side of the check valve, and another passage above the piston leads to the engine side. The weight of the piston keeps the air valve closed. The slightest difference in pressure caused by a back flow of water will cause, the piston to rise and allow the air valve to open; and in the opposite case, when exhaust pressure rises the piston will drop, the air valve close and the condenser resume its functions without any perceptible change in the speed of the engines. The vacuum breaker may be attached either to the check valve in the manner before described, or by means of pipes and the special fitting shown in Figs. 3 and 4 to the engine and condenser side of the exhaust pipe. Fig. 5 shows the check valve with vacuum breaker attached.

Trade-Marks.

A decision of considerable interest to manufacturers and others using trade-marks has recently been handed down by the United States Supreme Court in the case of a suit brought by a firm of millers to restrain another firm of millers from using the word "Columbia" in connection with their special brand of flour. The court refused to grant the application of the plaintiffs, and denied their exclusive right to use the word "Columbia" as a trade-mark for flour; laying down, at the same time, the following comprehensive propositions as the sole rule and practice in the establishment of a valid proprietorship in trade-marks:

1. That to acquire the right to the exclusive use of a name, device or symbol as a trade-mark, it must appear that it was adopted for the purpose of identifying the origin or ownership of the article to which it is attached, or that such trade-mark must point distinctively, either by itself or by association, to the origin, manufacture or ownership of the article on which it is stamped. It must be designed as its primary object and purpose to indicate the owner or producer of the commodity, and to distinguish it from like articles manufactured by others.

2. That if the device, mark or symbol was adopted or placed upon the article for the purpose of identifying its class, grade, style or quality, or for any purpose other than a reference to or indication of its ownership, it cannot be sustained as a valid trade-mark.

3. That the exclusive right to the use of the mark or device claimed as a trade mark is founded upon priority of appropriation.

4. Such trade-mark cannot consist of words in common use as designating locality, section or region of country.

An importer from Great Britain doing business in Dublin and Liverpool while here recently on a visit to the exposition called on his way back on a firm in this city of whom he had bought

Hosted by Google

goods for over 20 years. In conversation he remarked that he had just bought a traction engine for shipment to Great Britain. The senior member of the house here (being themselves manufacturers of some classes of machinery) asked in surprise if he had secured it as a curiosity, knowing such goods were originally made there and are still largely. The visitor said it was purely a business transaction, that a similar article there would cost about $1500. while this one in round figures cost $1000 laid down there, besides being much better in every way.

THE WEEK.

Detroit, Pittsburgh, Buffalo, Philadelphia and other large labor centers are rising nobly to the situation in making provision for the relief of their unemployed poor by means of public works and organized private charity.

One of the few remaining refuges is about to be closed to forgers and embezzlers. Argentina, it is announced, has entered into an extradition treaty with Great Britain, which covers these offenses.

Samuel Gompers has been re-elected president of the American Federation of Labor.

Representative Chickering has introduced a bill in Congress directing the Secretary of War to have surveys made for a ship canal from the great lakes to the Hudson River.

The City Council of St. Paul has recently paid out $9000, in sums of $1.50 per half day, to the unemployed of the city, and has now voted $5000 more for the same purpose. Only $1 per half day will, however, be paid henceforth.

Tramps are flocking into Kansas in great numbers in consequence of a circular recently issued by Governor Lewelling instructing the police not to molest them and declaring the vagrant law unconstitutional. The Governor has a fellow feeling for the vagabond fraternity, as he confesses to having been a member of it in his early years.

New York and Cincinnati are now in telephonic communication.

According to the annual report of the Director of the Mint, just published, there has been an increase of $318,295,000 in the aggregate circulation of gold and a decrease of $111,600,000 in the aggregate of silver in the principal countries of the world during the 12 months covered by his report. He puts the gold circulation of the world at $3,901,900,000, and that of silver at $3,931,100,000.

The Federation of Labor now in session in Chicago has passed a resolution of thanks to Governor Altgeld for pardoning the anarchists. What is the connection?

The contract for furnishing the first smokeless powder for use by the United States army was last week divided between two firms, the Leonard Powder Company and the California Powder Works, each to furnish 5000 pounds. The division was made in order to compare the merits of the two powders.

A friendly act of the French Government is the presentation to the State of New York of the major portion of its World's Fair educational exhibit, consisting of the work of pupils in the primary, secondary and normal schools of France, as well as a pedagogic library, containing text books used in the public schools, works of reference &c. The collection will be placed in the Capitol at Albany.

At the monthly meeting of the Board of Trade and Transportation in New York last week a report was adopted recommending a system of revenue marine as an adjunct to the United States navy.

Darius Davison, the naval architect, is, it is said, working on the plans of a ship that is, he says, to be the coming Atlantic liner. The vessel is to be 1000 feet long, 80 feet wide, 70 feet in depth, and to have a displacement of 45,000 tons. She will be moved by four propellers driven by a 50,000 horse-power engine, and the distinctive feature of the ship is a projecting bow and stern, each 150 feet long, an entirely new departure in marine architecture.

The King of Korea is rapidly adopting the conveniences of Western civilization. His Majesty has lately purchased in America an incandescent electric light plant, which is now being installed in his palace, consisting of 2000 lamps of 16 candle power, with steam engine, dynamos, &c., complete.

Germany's naval experts have decided that the best color to paint their cruisers and torpedo boats, in order to make them as difficult of observation as possible, is a kind of dirty buff. They recommend that the whole of the vessels should be uniformly coated with this color, and that nothing on their decks or upper works should contrast with it.

A motion has been brought forward in the English House of Commons asking that a committee be appointed to inquire into the management and expenditure of the British section of the Columbian Exposition. Assertions are made that the signatures on certain documents were forged.

A very significant illustration of the dullness in railway business is shown in a recent announcement that the Pennsylvania Railroad managers are cutting down expenses on their lines in every possible direction.

Northwestern stocks of wheat in elevators last Saturday were estimated to be 28,408,525 bushels, an increase for the week of 1,250,000 bushels in addition to the grain in mill storage.

It is announced as probable that a trunk line pool for export traffic will be established soon after the beginning of next year, with the object of bringing about a uniform restoration of east bound railroad freight rates between Chicago and New York, more particularly in respect to the grain traffic.

During the lake shipping season just closed 10,000,000 barrels of flour were received and handled at Buffalo, by far the largest record of any flour depot in existence. The season began April 16 and closed December 17. The average number of barrels handled daily was 40,000, but on some days as many as 150,000 were taken out of vessels and stored in warehouses pending reshipment by rail and canal.

At a recent meeting of the British Association the Callendar platinum pyrometer attracted general interest. The difficulty of reading high temperatures, such as that of a furnace, has led to the employment of an electrical method, in which the temperature is determined from the change of electrical resistance of a platinum wire when exposed to the high temperature. Mr. Callendar finds that the law of increase of resistance remains simple and constant for the extremely wide range of temperatures included between the temperature of liquefaction of air and that of a blast furnace, and his pyrometer is founded upon this principle.

It is already known that the William Cramp & Sons' Ship & Engine Building Company, of which G. Douglas Petrie, 39 Cortlandt street, is New York agent, has purchased from the Manganese Bronze & Brass Company, Limited, the formulæ for Parsons' manganese bronze and Parsons' white brass. The former is used for propeller wheels, as well as for any other purposes where a very strong, durable bronze is required, while the latter is valuable as an anti-friction bearing metal. Both of these alloys are now being successfully manufactured by the Cramp Company, the builders of the new cruisers "New York" and "Columbia." The "New York" has two three bladed propellers, and four triple expansion engines, aggregating 16,000 indicated horse-power, while the "Columbia" has three three bladed propellers and three triple expansion engines, aggregating 21,000 indicated horsepower, from which it can be readily understood that a very large amount of manganese bronze and white brass must have been used in their construction. Ten tests of specimens of Parsons' manganese bronze, which were cut from propeller blades cast by the Cramp Company in the last six months show the following average results: Elastic limit, 24,665 pounds; elongation in 2 inches, 20 per cent.; ultimate tensile strength, 60,375 pounds.

The Westinghouse Electric & Mfg. Company of Pittsburgh have just completed the erection of what is claimed to be the largest lighting machines ever built. These machines are for the Louisville Gas Company, Louisville, Ky., and a feature of their construction is that the fly wheel and the armature are combined, which effects a saving of both labor and space. Each machine has a capacity of about 9000 lamps; each plant stands 20 feet high, and the armature is 12 feet in diameter and makes 90 revolutions per minute. Each machine weighs 50 tons, and at a recent test witnessed by a number of experts the results attained were pronounced highly satisfactory. The abovenamed concern are also building the armatures for a 6-ton electric locomotive, which is being constructed at the works of the Baldwin Locomotive Company, in Philadelphia, for the North American Company. They are being wound for 900 volts at 225 revolutions per minute, the equivalent of 35 miles an hour. The motors are calculated to give a pull on the draw bar equal to 30,000 pounds, or one-fourth the weight of the locomotive, which is sufficient to move a very heavy load. The locomotive is to be used for hauling heavy freight trains short distances and for switching purposes, and is purely experimental. It will have four pairs of drivers 56 inches in diameter. If it meets the expectations of its designers other locomotives will be built in the near future.

The Iron Age

New York, Thursday, December 21, 1893.

DAVID WILLIAMS, - - PUBLISHER AND PROPRIETOR.
CHAS. KIRCHHOFF, - - EDITOR.
GEO. W. COPE, - - ASSOCIATE EDITOR, CHICAGO.
RICHARD R. WILLIAMS, - HARDWARE EDITOR.
JOHN S. KING, - - - BUSINESS MANAGER.

The Employment of Idle Money.

The enormous accumulations of loanable funds in our financial centers opens a wide field for activity for that clever and useful negotiator, the promoter. He is usually quick to discern the direction into which popular favor can be diverted when the time comes to withdraw funds from deposit in banks and trust companies and employ them in active work promising greater remuneration. It may be acknowledged at once that the time has not yet come when moneyed men have sufficiently recovered from their scare to allow them to take hold of new ventures. But a good deal of preparatory work must be done, and it is probable that where it has not been undertaken it will soon be required. The experience of the past year has been hardly such as to encourage much outside capital to jump into the manufacturing branches which *The Iron Age* represents. Nor is the uncertainty concerning what Congress will do with the tariff calculated to encourage investment. Probably the best chance for fresh capital lies in the rehabilitation of some of the manufacturing plants whose owners have failed. We do not, of course, refer to those undertakings which have been forced into receivers' hands simply through internal quarrels and intrigue. As is well known in the iron trade, there are a number of conspicuous cases of this character. But there are a number of works of recognized vitality and capacity for future money making which can be acquired for much less than the actual hard cash invested in them. Their competitors will hardly regard the infusion of fresh blood into them as a blessing.

To the iron, metal and allied trades the first source of orders has already come through the ability of municipalities to market obligations at fair rates. The manufacturers of pumping machinery, the pipe foundries and others have received quite a number of orders lately. The fact that prices obtained are unprecedentedly low has tempered their enthusiasm.

Another line in which an investing movement has started and is likely to develop very rapidly is the construction of suburban electric railroads. It is well known that many of these have proved very remunerative during their short life, so that the promoter of such schemes can make a very good showing by inference. We expect to witness a very rapid and considerable development in this branch, which will give a good deal of work to our industries.

There seems to be little chance for the promoter of standard steam railroads, because the market for this class of securities is overstocked now and because the majority of the great banking institutions who issue them have still their strong boxes filled with bonds underwritten but not placed by them.

There is quite a good deal of preparatory work going on in building circles, but it will take some time before money freely flows into the old channels of real estate improvement.

There is one point which American manufacturers should consider, when contemplating the contingency of the passage of the Wilson bill, and that is, that the present plethora of money would make it relatively easy to raise capital to back up importing partnerships, even if foreign funds did not eagerly seek such opportunities.

The Fate of Compulsory Arbitration.

Labor is able to take care of itself and proposes to fight its own battles. This is the decision in a nutshell which was arrived at last week in the great convention held at Chicago by the American Federation of Labor. A resolution had been submitted by a representative of the Amalgamated Association of Iron and Steel Workers instructing the president of the Federation to formulate a bill and endeavor to have it enacted into law by the legislatures of the different States "making it obligatory on the part of corporations and the representatives of capital to treat and negotiate with the representatives of labor, in conference or otherwise, in the settlement of wages disputes, and in other matters when their services are called for."

The matter was referred to the Committee on Resolutions, who reported non-concurrence, which precipitated a discussion of the expediency of a compulsory arbitration law, with the result that the convention, by an overwhelming vote, sustained the report of the committee. The discussion, as reported, was extremely interesting, as showing how the leading spirits of the great trades unions which constitute the Federation are disposed toward arbitration in general. The influence of the iron and steel workers, it is pleasing to note, was exerted in favor of the civilized method of settling strikes and labor disputes. They were unable, however, to stem the tide of opposition, which came most strongly from representatives of tailors, bakers, tilelayers, &c.

It might be supposed that the lesson of the late great coal strike in Great Britain would have been deeply impressed on the minds of these delegates, who had come together ostensibly for the purpose of considering the best interests of the wage-workers whom they represented. This is the most notable instance in recent industrial history of a great strike giving promise of running on indefinitely, notwithstanding evidences of terrific punishment on both sides. It would have probably been running along yet if the British Government had not interfered and practically compelled a settlement which seems fairly satisfactory to all concerned now that the controversy is over. This was referred to in the discussion, but without much effect. The statement was made by a delegate that arbitration was only possible under special circumstances, and that when these conditions existed a dispute would naturally seek that means of settlement without the intervention of a statute to enforce it. The assertion, however, which seemed to have the greatest force in making the opposition effective was that if arbitration were compulsory by statute the workingman would find himself more often called on to defend himself from a demand for a reduction in his wages than the law would be invoked to secure advances. The prediction was made that with a compulsory statute one compromise after another would be demanded by employers, until labor organizations would be compromised out of existence.

The principal opposition to compulsory arbitration, when these opinions are sifted, seems to arise from the fear that in some way labor organizations will then be supplanted. The rights of labor once acknowledged by the law, and the interests of workingmen from that time carefully guarded by the machinery of government, there would then be very little further use for trades unions and all their complicated and costly machinery. This is an end by no means desired by labor agitators, many of whom are now receiving larger incomes with much less work than if employed in their regular vocations at the bench or the machine. It is, however, the natural drift of this period, and although labor leaders may endeavor to check the movement they will be unable to stay its progress more than temporarily. The temper of the great mass of the people is in favor of some general measure which will put an end to serious strikes in important lines of industry which, when in progress, interfere with the comfort or convenience of the people of a whole community and often of a large part of a State, or, in fact, several States.

The labor question has become so prominent of late years and has so forced attention to it by publicists that it is understood much more fully than at any previous time. The public are less disposed now to let the disputants "fight it out," as though the contest was merely like a dog fight, but regard a labor dispute with much impatience, as something which should not happen, and if it unfortunately does break out they wish it settled as quickly as possible. The American Federation of Labor may maintain its stand against compulsory arbitration

Hosted by Google

or against all arbitration, but unless it has something more practical to offer than the old appeal to endurance or brute force the great association will discover at no distant day that its followers have disintegrated by the operation of outside influences and that the occupation of the leaders has gone.

The Western Wire Trade.

It seems but yesterday that attention was called in these columns to the dangerously rapid expansion of the Western wire trade. It was, however, some two years since. At that time the Washburn & Moen Mfg. Company were building a great plant at Waukegan, the Joliet Enterprise Company were building another at Joliet, and the Chicago Wire & Spring Company had in hand a third at Wireton Park, all in the immediate vicinity of Chicago. About that time, also, a fourth wire plant was undertaken by the Clark & Windsor Wire and Spring Company at Joliet, and subsequently another was built by the Superior Barb Wire Company at DeKalb, Ill., which has but recently been put in operation. The expansion of the Western wire trade, if all these enterprises were in active operation to-day, would have been something enormous, especially as the capacity of old works has in the meantime been largely increased. But what was threatened has not come to pass in its entirety. Instead, some of the most ambitious of these schemes have come to grief. The Chicago Wire & Spring Company's great works were not completed for lack of capital, although a large part of the machinery was installed. At Joliet, within the last 12 months, three wire trade failures have occurred—the Joliet Enterprise Company, the Clark & Windsor Wire and Spring Company and the Ashley Wire Company. Of these, the Joliet Enterprise Company failed because the works were laid out on too large a scale for the capital of those interested, but the other concerns have been driven to the wall on account of the unprofitableness of the wire trade. They were well managed, but could not stand the pressure of low prices and a tight money market. The other new establishments are in such strong hands financially that they have gone ahead with no interruption, and will unquestionably be able to survive this era of little or no profit.

Those who contemplate the erection of new wire works in the West, and there are a few, may well pause to contemplate the conditions now prevailing. The works in operation are abundantly able to supply the demand in connection with their colleagues located further East, who market some of their product in the Western States. The time may come when an expansion of production will be necessary, but it now seems remote. When a reverse in business does occur, the bankrupt establishments will again become factors in the trade. They are all well located and well equipped. A different set of capitalists will probably acquire the properties at a low valuation, but that operations will be resumed at some time is inevitable. The disasters which have overtaken the original investors are deplorable, but they were plainly caused by an expansion of the trade beyond its safe requirements.

Maneuvering for position is quite lively at the present time between the sellers and buyers of coke. The period for annual contracts is approaching, and, as is natural, a determined effort will be made to prevent a further decline. While furnacemen profess to look forward to a repetition of the 90-cent coke days, producers have always claimed that $1.25 at oven in the Connellsville region means exhaustion of valuable lands at an actual loss. One fact is much dwelt upon. Under the present sliding scale labor is paid on the basis of a minimum selling price of $1.75 for furnace coke. Our quotation for weeks has been $1.10, and contracts have been made very close to $1, so that the sliding scale is manifestly unjust to the coke operators. It seems reasonable to expect that the principal producer will attempt to arrive at some readjustment. As is well known, the principal interest is identical with the largest aggregation of steel plants in the Pittsburgh district, so that the furnace plants in Pittsburgh, in the Wheeling, Mahoning and Shenango districts are dependent for their supply of coke upon their keenest rival in the iron trade. It is stated that the great steel company referred to is in a very good position to take care of itself in the event of a shut down at the ovens in the Connellsville district, and that, therefore, two ends might be secured through a strike, viz., the lowering of wages and the squeezing of rival steel manufacturers. Against such a course would be the encouragement given to Eastern manufacturers using anthracite and to the producers of coke in West Virginia, aside from sentimental considerations as to the position of the wage earners in the Connellsville district and the men who have partial employment in the Pittsburgh and tributary districts. Still, a strike in the Connellsville coke region is a contingency which the steel trade must not fail to keep in mind during the next six weeks.

Those who advocate the passage of the Wilson bill attempt to make a good deal of capital out of the compensation offered to manufacturers through the potent aid of free raw materials, iron ore and coal. Let us state at the outset that as metallurgical fuel none of the foreign coals available to the Atlantic and Gulf ports can be of any service whatever. Nova Scotia coal is not of such quality as to yield a coke which American ironmasters would be glad to use. In the heavy iron and steel trades the cheapening of cost through a possible lowering in the price of steam fuel would be insignificant. It is, of course, quite another matter with iron ore. Let it be assumed that the blast furnaces within reasonable access to the coast would save the entire duty of 75 cents per ton, or taking the leanest ore likely to be imported, a maximum of $1.50 per ton of pig iron. This compares with a maximum cut of $4.40 on Bessemer pig, $4 on Scotch foundry, makers' brands, $4.75 on Scotch warrants, and over $5 on Middlesborough warrants. Figuring waste, the "compensation" of free iron ore would amount at a maximum to, say, $1.75 on soft steel billets, as compared with a cut of nearly $5 per ton by the proposed duty. The former figure also applies to rails, when the estimated maximum cut in the rate is nearly $9. In the whole line of rolling mill products, the maximum compensation through free ore, provided the American manufacturer got the whole advantage, would not go beyond $2, making the most liberal allowance for waste in manufacture, whereby the quantity of free raw material used would be increased.

It is significant that orders for cars which are now being placed by railroads are stated by the purchasers not to be an outgrowth of present necessities. They have plenty of cars to handle the business now offering. But it is encouraging to note that at the same time the managers of these railroads think that the new cars will be needed at a reasonably early day, and that it is wise to buy them now when so many works are in need of orders and prices are the lowest ever known.

At Pittsburgh each lodge of the Amalgamated Association of Iron, Steel and Tin Workers is working for the relief of its own members. No funds are being drawn from the National treasury for relief, except in rare cases where the said lodges are entirely without money and unable to help their destitute members. There is a general relief movement among the lodges where individual destitution is looked after in extreme cases.

William W. Steele, foreman of the wire department of the Barbee Wire & Iron Works, at Lafayette, Ind., has just completed a massive elephant, 10 feet high and 12 feet long, for the midwinter California exhibit to be held in San Francisco. When placed on exhibition it will be covered with California oranges. The frame will require 80 000 oranges to cover it. The design is a clever piece of mechanical art.

Krupp guns are usually associated with the tragedy of war. An instance has recently occurred, however, says the Philadelphia *Ledger*, where a Krupp gun played its part in a queer little comedy. The Lilliputian Republic of Andorra bought a Krupp cannon which will carry a ball 18 km. As the Republic is only 6 km. wide the cannon cannot be fired without dropping its missile into foreign territory, Italy or France, which might be regarded as a hostile demonstration. Andorra evidently does not require a full grown gun.

The Boilers at the World's Fair.

To the Editor: Not content with appealing to the courts with a view of preventing the installation of our boiler alongside of their own at the World's Fair, and thus enabling a comparison to be made between the two, the Babcock & Wilcox Company have undertaken to belittle the honor reaped by us and other companies to whom medals were awarded. In a letter recently addressed to certain trade papers and on a placard which they attached to their boilers at the Fair, they state that "They were informed that it was the purpose of the jury to make awards upon boilers based entirely upon the written statements of the competitors, without tests or any personal knowledge in the possession of said jury concerning the comparative operation, construction, economy or durability of said boilers. Believing that an award based on such insufficient knowledge would be of no practical value, they declined to make any such written statements for the purpose of receiving an award."

The Babcock & Wilcox Company seem to be laboring under a misunderstanding of the conditions under which the award was rendered to us at least. The jury, not content with simply reviewing our claims, detailed one of their number to investigate our boiler in actual operation at as many different points as could be reached. The batteries at the World's Fair were not alone subjected to the closest scrutiny and examination, but a number of plants operating in Chicago were visited, as well as in Circleville, Ohio, Pittsburgh, Pa., and also Allentown, Pa., at which latter place a Babcock & Wilcox battery was operating alongside of ours, and a comparison was made between the two.

With reference to a test, it is well known that efforts were made by the Jury of Awards to have tests made on as many boilers in the boiler room as possible. To that end they addressed a circular letter to the exhibitors proposing that each one should bear the expense of having a test made on his plant. None of the other six companies exhibiting in the main boiler room would agree to submit to this charge except ourselves. We not only sought a test, but addressed a letter to the Jury of Awards in which we challenged each competitor in the main boiler room to a test, but we wanted a competitive test or none at all, objecting to having the results of a test conducted scientifically by such men as were proposed to make it, compared with the "dress parade" tests published by other companies.

The attitude of the Babcock & Wilcox Company cannot be considered altogether consistent when it is borne in mind that their representative on the witness stand stated that their boilers had not and would not be entered as an exhibit. Their representative at that time further alleged as one of the reasons which induced them to make so vigorous a fight against our installing the Stirling alongside of theirs, that he considered the Stirling unsafe. If the Babcock & Wilcox Company, or any one else, can point to a single instance in which the Stirling boiler exploded resulting either in loss of life or injury to man or beast, we will pay $2500 to any charity in the city of Chicago that they may designate.

THE STIRLING COMPANY.

CHICAGO, December 11, 1892.

The Duty on Charcoal Iron.

To the Editor: Referring to your leading article in last issue, page 1082, on the tariff on charcoal iron, we wish to call your attention to the fact that while heavy reductions in duty were made in the metal schedule of the tariff of 1883, and even in some cases in the McKinley bill of 1890, the duty on charcoal iron has remained virtually the same since the Morill bill of 1861. The duty then was fixed at $22.40 per ton of 2240 pounds, or not less than 35 per cent. ad valorem, and in 1883 the duty was made $22 per ton, only a reduction of 40 cents per ton, and the McKinley bill of 1890 fixed it "at not less than $22 per ton."

We are not aware that any charcoal bar iron is made in this country, even with the present protection of about 70 per cent. ad valorem, and fail to understand what you mean by "the higher qualities of American materials, the market for which would be practically delivered over to the Swedish producer." A. MILNE & Co.

NEW YORK, December 14, 1893.

To the Editor: Noticing your editorial comments on the duty on Swedish iron in your issue of the 14th inst., and your statement therein that £6. 10/ iron pays $22 per ton duty under the existing law, would ask if you think it necessary for the welfare of the American iron manufacturers to be protected to the tune of over 70 per cent. on iron that does not enter into competition with them because of its superior quality, which thus far they have not been able to produce?

As this iron is essential for many manufacturers here in order to produce high quality goods, it would certainly seem to be an advantage for them to obtain, under a reasonable duty, material—which to them is raw material—that cannot be obtained at all from the domestic iron makers, and consequently no detriment to the latter. SUBSCRIBER.

BOSTON, December 15, 1893.

We did not intend to convey the impression that charcoal bar iron is being produced in this country. During the past few years American manufacturers of high grades of steel have succeeded in capturing a considerable share of the market once held by imported Swedish material. There is very serious danger that they lose not alone this, but that also the higher qualities of American special puddled iron will be crowded out.

PERSONAL.

Chauncey H. Andrews, for many years identified with the iron and steel interests of the Mahoning Valley and at present a large stockholder in several of the prominent manufacturing concerns at that place, is lying seriously ill at his residence in Youngstown, Ohio. His condition is so precarious that it has been deemed advisable to summon by telegraph a number of his near relatives living in Washington and New York.

Warren Delano, Jr., who has been connected with important anthracite coal interests and with the manufacture and use of fire brick, has been appointed vice-president of the Lackawanna Steel & Iron Company, with headquarters at 52 Wall street, New York.

Harry Parrock, formerly superintendent of the Upper Mill of the Union Iron & Steel Company, at Youngstown, Ohio, has been made general manager of the Pomeroy Mill, operated by the above concern. The position made vacant by Mr. Parrock has been given to John Bennington, who was formerly superintendent of the Warren Mill of the Union Iron & Steel Company, at Warren, Ohio.

L. B. Whitney has resigned his connection with A. Whitney & Sons of Philadelphia, manufacturers of car wheels, and associated himself with DeWitt W. Smith at 15 North Seventh street, in that city, where they jointly will look after the interests of the Lidgerwood Mfg. Company, the New York Safety Steam Power Company and the Erie City Iron Works Company.

John Jarrett, secretary of the Sheet Iron Manufacturers' Association, has been confined to his home at Pittsburgh, Pa., during the past ten days. His illness is not such as to cause alarm to his numerous friends.

OBITUARY.

ISAAC C LEWIS.

Isaac C. Lewis, president of the Meriden Britannia Company, Meriden, Conn., died suddenly on the 7th inst. at his home, in that city. Apoplexy was the cause of his death. Mr. Lewis was born in Wallingford, Conn., October 19, 1812. In his fifteenth year he was apprenticed to Hiram Yale to learn the britannia ware trade at Wallingford. In 1834 Mr. Lewis formed a partnership with George Cowles under the title of Lewis & Cowles, and hired rooms in a factory in East Meriden for the manufacture of britannia metal goods. They remained here for about two years when they closed up business, Mr. Cowles going North and Mr. Lewis West. Mr. Lewis returned, however, soon after and commenced business again with the late Lemuel J. Curtis as a partner under the style of Lewis & Curtis. After about two years this partnership was dissolved. Shortly after this dissolution Mr. Lewis purchased a house and small farm and built a shop and put in a horse-power. Business increased to such an extent that a small engine was put in, but this proving insufficient Mr. Lewis bought the factory where he first commenced business with Mr. Cowles. He soon after associated with Daniel B. Wells, a former apprentice, under the name of I. C. Lewis & Co. Mr. Wells died soon after and Mr. Lewis bought his interest. In 1852 the Meriden Britannia Company was formed, with Mr. Lewis as president. He remained president of the company for about 12 years, when he declined to hold the office any longer. He still, however, remained a member of the company and took an active interest in the business. Upon the death of Horace C. Wilcox he was again elected president, and held the position until the time of his death. Mr. Lewis represented Meriden in the State Legislature in 1848, 1859, 1862 and 1866. He was also Mayor of Meriden for two years. Mr. Lewis was directly interested in many of the leading industries of Meriden. He was president of the Miller Bros. Cutlery Company, Chapman Mfg. Company and Meriden Trust & Safe Deposit Company, a director of the Meriden National Bank, trustee of the Meriden Savings Bank, and up

Hosted by Google

to six months ago a director in the Wilcox & White Organ Company. He was also interested as a stockholder in several other local enterprises, and had considerable money invested outside of Meriden. Mr. Lewis began life without a dollar, and by his own exertions accumulated a very large fortune. He never had a note protested, never sued any man, and never had a suit brought against him.

ARTHUR I. BEMIS.

Arthur I. Bemis, a long time resident of Springfield, Mass., and a member of the Bemis & Call Hardware and Tool Company of that city, died on the 2d inst. from the effects of a shock suffered a week previously. Mr. Bemis was born at Willimansett, January 18, 1835. When eight years old he removed with his parents to Springfield, where he spent the rest of his life. He received his education in the public schools and then entered the employ of his father in the coal and iron business. About 1860 Mr. Bemis was admitted a partner in the firm of S. C. Bemis & Co., and in 1868, when his father retired from active life, he with his brother, Thomas O. Bemis, and the late S. R. Phillips continued the business under the firm name of Bemis, Phillips & Co. When the present firm of Bemis & Collins was formed he retired permanently from the coal business. Of late years he had been actively identified with the business of the Bemis & Call Hardware and Tool Company, of which corporation he had been a director for 28 years. Mr. Bemis had been a trustee of the Hampden Savings Bank for a long term of years. Mr. Bemis was a man of genial disposition, with a quick sympathy which made for him a great many friends, to whom the news of his death will be a source of sincere sorrow.

CALVIN BRADFORD DOTY.

Calvin Bradford Doty died at his home in Steubenville, at the ripe age of eighty years, after having been practically an invalid and confined to his room for the past seven years. Mr. Doty was a pioneer nailer and iron manufacturer of that place. Mr. Doty was born in Wareham, Mass., December 11, 1813, and was descended from old New England ancestry. He learned his trade of nailing in Wareham, and early in life, as a young man, came with fellow workmen to Pittsburgh.

Later he came to Wheeling and with other nailers formed a company and built the Belmont mill. He sold his interest in this mill, and with 21 other workmen with whom he had been associated for several years formed a company and built the La Belle mill. Besides being an original stockholder, he also held a position in the mill. He was a director in the La Belle until several years ago, when the directorship passed into the hands of his son, Harry L. Doty. Mr. Doty removed to Steubenville about 35 years ago and became a stockholder and manager of the Jefferson mill. He retired from this position in 1885.

WILLIAM HOLMES.

William Holmes, for a number of years a member of the firm of the A. Garrison Foundry Company, at Pittsburgh, died suddenly in that city last week. Mr. Holmes was regarded as one of the best authorities on educational matters in Pittsburgh.

The condition of the car building industry has been strikingly revealed through the placing of an order for 75 passenger cars for the Long Island Railroad. In spite of the efforts of Eastern works to secure it, the order was taken by the Pullman Company at a price which is said to be unparalleled.

Washington News.

(*From our Special Correspondent.*)

WASHINGTON, D. C., December 19, 1893.

The customs provisions of the new tariff bill, with the report of the majority, were submitted to the House today. The minority will follow with their report, which has been prepared by ex-Speaker Reed. No effort will be made to discuss the subject until after the holidays. The bill will then be taken up promptly and carried to a speedy finish under the parliamentary gag system which dominates necessarily under the rules of the House. It is expected that the party men claimed as opposed to the bill (some put the number as high as 40) will be increased by some additions after the Northern members of the majority get among their constituents and see the conditions as they exist at home and hear what employers and wage workers alike have to say.

A vote of 170 on an average attendance in the House would probably defeat the bill. Of this number the minority party might contribute 120 on a fair deal. This subject has been canvassed, but the Louisiana sugar men, for instance, ask the minority to vote with them to protect sugar, but are unwilling to reciprocate and vote for amendments which the minority want. The same one sided arrangements are talked about among the representatives of wool, lumber, iron ore and coal districts. If they make a combine and agree to support the amendments proposed by the minority they can count upon at least 120 minority votes to start with on their own plans.

A consensus of opinion in the House leads to the conclusion that the tariff bill practically as reported from the committee will pass that body, possibly before February 1. In the Senate the prospects are not quite so encouraging for an easy passage through that body.

It was announced in *The Iron Age* several weeks ago that the Senate Committee on Finance had taken up the House tariff bill informally and after some discussion the majority had decided to consider the measure as soon as it was in tangible shape and in anticipation of its transmission from the House. The committee have already commenced a preliminary review of its provisions and will take the bill up in more formal order now that the customs provisions have been finally determined. It is not anticipated that the measure will receive any material modifications in the lower House, although there is some agitation of an attempt to introduce revisions in Committee of the Whole.

There is a disposition on the part of the majority in the Senate Committee to give the manufacturers and wage workers an opportunity to state their views and to make modifications in accordance with a practical knowledge of the interests of industry aside from the question of revenue.

At a conference between the majority and the minority members of the Finance Committee, there was a partial understanding as to the programme which would be pursued in the consideration of the House bill. There was then a disposition on the part of the minority not to enter into a protracted opposition, but simply to propose their amendments and have a fair discussion for the purpose of making a record, and then permitting the bill to come to a vote. If the majority proposed to pass it in the shape it would have assumed by that time to let them do so.

Very recently, however, the minority in the Senate, in view of the universal sentiment in the Northern States and a strong popular sentiment against it in Maryland, Virginia, West Virginia and Alabama, have decided on a different course. It is not improbable that Senators Sherman, Morrill, Aldrich, Allison, Jones and other leaders of the minority will pursue a different line of tactics based upon the sentiment of the people which they construe as a dependence to prevent the passage of the bill at all, or in any form at least which would not be satisfactory to the employers and the employed. The minority have the power to do this, and it is not likely, in the face of public sentiment, that a majority could be had to force a cloture.

Some of the minority Senators are now talking quietly among themselves of protracting the debate in the Senate, if necessary, into the Congressional campaign of next year in order to get the verdict of the people. If they fail to elect a House and Senate which will not be favorable to tariff revision to the extent proposed by the Wilson bill the measure will then be permitted to go through. If they render their verdict against the system of revision proposed it will be an easy matter to prevent the bill from going through in the short session.

The city for the past week has been full of manufacturers, who have come here to protest among the Northern Representatives in the majority against the rates established in the Wilson bill. They, as a rule, have had a cold reception among the Representatives, but in the Senate they have been promised an opportunity to present their views. Some of these gentlemen say that by the time the bill gets under way in the House the people throughout the Northern and some of the Southern States will be heard from in a way which will admit of no doubt as to their position.

It has been admitted to those gentlemen that organized action on the part of the wage workers would have more weight than from the employers, as the stock in trade of the small politician in favor of a revenue tariff has been an effort to prejudice the wage worker against his employer on the ground that the former gets a larger proportion of profit than the wage worker.

It was said of the campaign of 1892 that the wage workers would not "get under the same umbrella with the employer," and hence the result.

It is said that the election of 1892 represented national sentiment on tariff revision, and the elections of 1893, with their tremendous majorities in Massachusetts, New York, New Jersey, Pennsylvania and Ohio, not to speak of Nebraska and Montana, were due to local causes. Therefore the only convincing argument of the fallacy of this conclusion would be an emphatic expression of the views of the wage workers and masses of the people. In the absence of such a demonstration to support the minority movement in the Senate the leaders of that side will not feel justified in an attempt to prevent the passage of the bill unless very radically modified, to the exclusion of all other business.

MANUFACTURING.

Iron and Steel.

Stack No. 2 of the Dunbar Furnace Company, at Dunbar, Pa., is now being shoveled out preparatory to being put in blast. As this furnace has been idle since August 1, 1892, it cannot be stated just now how soon the furnace will be ready for operations. It is stated on good authority that the plant of the Dunbar Furnace Company has recently changed hands, having been leased by a number of Philadelphia capitalists for a period of three years.

At the present time there are four furnaces in the Mahoning Valley in operation, these being Hubbard Furnace of Andrews & Hitchcock, Haselton of the Andrews Brothers' Company, Mary of the Ohio Iron & Steel Company, and Mattie of the Girard Iron Company, at Girard, Ohio.

The plant of Summers Brothers & Company, Struthers, Ohio, manufacturers of box annealed sheet iron and sheet steel, is in partial operation, the product being light steel sheets. Prospects for the continued operation of this plant for the winter months are reported as very bright. The continued excellent demand which this firm are receiving for their iron and steel sheets is due to the fact that they endeavor at all times to turn out product of the very best quality.

We are advised that the report that the plant of the United States Iron & Tin Plate Mfg. Company, Demmler, Pa., was entirely closed down is without foundation. While it is true that the plant is not being operated to full capacity, it is also a fact that at no time within the past three or four months have operations been entirely suspended. While the demand for sheets is very light at present this firm are doing a large business in tin and terne plate. As their tinning capacity is not large enough to consume their entire output of sheets it is necessary occasionally to run the sheet mills only half time.

The Cleveland Steel Company, Cleveland, Ohio, have been granted a charter of incorporation, with a capital stock of $300,000. The incorporators are Frank Rockefeller, John A. Potter, L. H. Severance and S. A. Sague. This new concern will succeed to the business of the Britton Iron & Steel Company, at Cleveland, Ohio, manufacturers of steel and iron plate and black and galvanized sheets. At present the above plant is idle.

The plant of the W. Dewees Wood Company, at McKeesport, Pa., manufacturers of patent planished sheet iron, is in operation to nearly full capacity.

During the time the Lower Mill of the Union Iron & Steel Company, at Youngstown, Ohio, was idle, a number of improvements were made. Among them was the erection of a new Hazelton porcupine boiler on the 8 inch mill, two of the same type on the 10-inch mill, and a new engine on the 7-inch mill, also the addition of six new double puddling furnaces, equipped with Hazelton boilers.

On January 1, 1894, new wage scales will go into effect at the Homestead Steel Works, Homestead, Pa., Upper and Lower Mills, Pittsburgh and Beaver Falls Mills, Beaver Falls, Pa. It is understood that these new scales involve some heavy reductions in wages, especially to high priced men. At the Beaver Falls Mills it is stated that the new scale calls for reductions amounting to 40 per cent. for some classes of labor.

At Joliet, Ill., on the 9th inst., the sheriff took possession of the personal property of the Ashley Wire Company on a judgment of $11,090 in favor of John Y. Brooks. The Ashley Wire Company gave a mortgage of $67,246.24 last July to the Illinois Steel Company. Their mill has been closed down since June. The plant is a very good one and quite new, having been built within the past two or three years, since the company removed their machinery from the Joliet penitentiary. They were drawers of wire and manufacturers of barb wire.

James Stevens of the Merchant Iron Mill, Rome, N. Y., states that the works will continue to run as during several months past on half time as long as there are sufficient orders to give the men work.

A number of sheet mills in the plant of the Moorhead-McCleane Company, at Pittsburgh, which have been idle for some time, have again been put in operation.

No. 2 furnace of the Sloss Iron & Steel Company, at Birmingham, Ala., produced during one week recently 1204 tons. All of this was foundry except 61 tons. The best previous week's record averaged 140 tons per day.

The Elwood Steel Company of Elwood, Pa., have made an assignment, on account of a disagreement among the stockholders. Liabilities, $25,000; nominal assets, $125,000.

The Slatington Rolling Mill, at Slatington, Pa., has resumed.

The statement that the Passaic Rolling Mill, at Paterson, N. J., has closed for an indefinite period is untrue.

The two furnaces of the Shelby Iron Company, at Shelby, Ala., which have been out of blast since October 4 last, are being relined, with the object of being in position to take advantage of any improvement in the near future in the demand for car wheel iron. The company have a full force at work raising ore.

The schedules of Fuller Brothers & Co., iron commission merchants, at 139 Greenwich street, New York, who failed on August 8, show liabilities of $585,802, of which $59,779 are contingent; nominal assets, $625,931; actual assets, $287,422 Of the latter only about $140,000 will probably come into the assignee's hands, as $150,000 of the assets were hypothecated previous to the assignment to secure debts exceeding that sum. The principal creditors are C. A. Godcharles Company, Milton, Pa., $68,317; Post & Flagg, $54,173; W. H. Godcharles, & Co., Towanda, Pa., $31,331; Apollo Iron & Steel Company, Pittsburgh, $45,701; Frederick Sturges, $63,431; Oliver & Roberts Wire Company, Pittsburgh, $25,500; Dover Iron Company, $15,000; Merchants' Exchange National Bank, $33,500; Fuller, Lord & Co., $18,279; estate of Mary B. Fuller, $15,365; estate of Dudley B. Fuller, $23,819. Some of the creditors are secured.

The Radford Pipe & Foundry Company, whose works are at Radford, Va., have been running steadily for several months past, and are now pushing production to their utmost capacity. They report having taken several sizable contracts of late, and that prospects are excellent for a large tonnage in pipe business next year. The ready sale of municipal bonds tends to encourage water works improvements, some of which have been contemplated for years but laid aside because of difficulty in financing securities.

The Haselton Furnace of the Andrews Brothers Company of Youngstown, Ohio, is reported by the owners to be doing better work than ever before. It is making an average of 175 tons daily, principally Nos. 1 and 2 foundry.

The Muncie Muck Bar Iron Company, now operating the old nail works plant at Muncie, Ind., are turning out 25 tons of muck bars daily.

The stockholders of the Joliet Sheet Rolling Mill Company, at Joliet, Ill., have elected the following Board of Directors: M. Calmer, F. W. Werner, L. F. Beach, Dr. Duncan, L. J. Sehring, D. Rosenheim, C. E. Woodruff. Mr. Woodruff, named in this list, is a well-known Chicago hardware merchant. It is expected that arrangements will be shortly made for a resumption of work. The mill has been idle for months.

A report that the East Chicago Iron & Steel Company of East Chicago, Ind., intended to erect a new 18-inch train of rolls has been widely published. There is not a word of truth in this statement, which has caused the company much annoyance. The report that the Illinois Steel Company are going to erect a new merchant mill at Bay View is also emphatically denied by Superintendent Otjen.

No. 1 Colebrook Furnace of Robert H. Coleman, Lebanon, Pa., has resumed operations under the direction of the assignees after four months of enforced idleness.

The rolling mill at Burlington, Iowa, is to be moved to a city still further West. Youngstown papers state that B. M Campbell, Harry G. Hamilton and Morgan Evans of that city have gone West to negotiate the deal and that it will probably go to Seattle, Wash. The controlling interest in the Burlington mill is owned by Richard Brown. Judge Wilson and J. F. Holcomb formerly owned stock in the concern. Harry G. Hamilton, now assisting in engineering the deal, was formerly general superintendent.

The embarrassment of a large Lehigh Valley furnace company, to which brief allusion was made in *The Iron Age*, has since culminated in the failure of the Crane Iron Company of Catasauqua, Robert F. Kennedy of Philadelphia, and Leonard Peckitt, superintendent, being appointed receivers. The failure to pay the interest due on the bonds and other obligations of the company on November 1 is what brought on the climax. The total bonded indebtedness at this time was reported to be $700,000. The funded debt consisted of first mortgage sixes, $925,000, due May 1, 1900, of which $448,000 are outstanding, the company having bought in the balance. There are also $350,000 of bonds hypothecated for loans. The company, who were formed in 1889, operated four furnaces at Catasauqua, and leased the Macungie Furnace. In 1891 the total amount of iron made was 89,003 tons, and during 1892 this was increased to 114,955 tons.

The two Lucy furnaces, at Pittsburgh, which have been idle for about four months, resumed operations on Monday morning, the 18th inst. These two stacks are 85 x 20 feet, and have a combined weekly capacity of about 4000 tons.

The Wheeling Steel Works of the Wheeling Steel & Iron Company, Wheeling, W. Va., have been idle since last July. During the shut down extensive repairs and improvements were made to the plant, and as these have been completed the firm are now in position to put the plant in operation again as soon as the condition of trade warrants. The wage scale under which these works are operated does not expire until January 1, 1894, but the firm have already been notified by their employees that they will return to work and agree to accept the same reductions in wages granted in other Bessemer steel plants in the Ohio Valley. It will be remembered that the new wage scales adopted by the different steel concerns in the Wheeling district called for a reduction of about 33 per cent.

The receiver's sale of the effects of the American Steel Wheel Company, advertised for December 13, was adjourned to January 10. The sale will take place at Norwood, N. J.

The nut and bolt works of J. H. Sternberg & Sons, Reading, Pa., will work ten hours a day hereafter, instead of eight, as has been done for some time past.

From Pueblo, Col., comes the announcement that the steel works of the Colorado Fuel & Iron Company will open up in all departments early in January. It is stated that the orders for rails now booked will keep the plant running for some months to come.

A special meeting of the stockholders of the Bethlehem Iron Company, Bethlehem, Pa., will be held on February 14, 1894, for the purpose of voting on a proposition to increase the capital stock of the concern from $5,000,000 to $10,000,000.

At Pittsburgh the Carnegie Steel Company, Limited, have filed a bill in equity against W. V. McCracken and William Semple, Jr., doing business as McCracken & Semple, the Pittsburgh, Akron & Western Railroad Company, and W. A. Lynch, receiver of the railroad company. On July 29, 1893, it is stated, McCracken made a promissory note for $70,000, payable on demand, to the Pittsburgh, Akron & Western Railroad Company, and it was indorsed by the railroad company to the Carnegie Steel Company, Limited. There were also deposited in the hands of the steel company as collateral security for the payment of the note 160 $1000 first mortgage 5 per cent. gold bonds of the railroad company. In September demand was made for the payment of the note, but it was refused and the note was protested. The plaintiff asks for a decree authorizing the sale of the bonds, and that the plaintiff may be authorized to purchase and hold the bonds free of any claim of any of the defendants.

The new Bessemer Steel plant of the National Tube Works Company, at McKeesport, Pa., built by the Pittsburgh Iron & Steel Engineering Company of Pittsburgh and illustrated in *The Iron Age* of November 16, was put in partial operation last week. So far the operations of this plant have been entirely satisfactory to all concerned.

The order recently issued for the closing down of the entire plant of the Pennsylvania Steel Company, at Steelton, Pa., from December 23 to February 1, has been countermanded and operations will be continued until January 1 and perhaps longer. Enough orders have been received to keep the works running until the first of the year, and if additional orders are received the plant will be kept running until these are filled.

Hosted by Google

The Lloyd Booth Company, Youngstown, Ohio, are now building one of the largest and most complete blooming mills in the country for the new Bessemer plant of the Ohio Steel Company at that place. The mill will be of the reversing type, and was designed by Julian Kennedy of Pittsburgh, who is consulting engineer of the Ohio Steel Company. The rolls and pinions are made of cast steel, and the pinions are 35 inches in diameter on the pitch line. The housings are very heavy, weighing about 19 tons each. The screwing down gear for raising and lowering the top roll will be manipulated by electricity. The roll tables for handling the blooms are also being built by the Lloyd Booth Company, and will be about 35 feet long, each table having 26 driving rolls. These will also be operated by electric power.

Last week notice was given by the New Castle Wire Nail Company, New Castle, Pa., to the effect that the wire nail and rod mills of that concern would be run on single turn until further notice.

The H. W. Minnemeyer Mfg. Company of Allegheny, Pa., have been granted a charter of incorporation, with a capital stock of $25,000. The incorporators are Henry W. Minnemeyer, C. E. Wolff and Paul C. Wolff, all of Allegheny, Pa.

Last week the Edgar Thomson Steel Works, Bessemer, Pa., were running on steel billets, but on Monday morning, the 18th inst., the manufacture of rails was resumed.

The South or old Scranton mill of the Lackawanna Steel & Iron Company of Scranton, Pa., started double turn yesterday, being the only rail mill in the country which is running double turn. Work will begin first on the 15,000-ton order for the Boston & Albany Railroad. Wages of all the tonnage hands have been reduced from 10 to 35 per cent. Orders have also been given to start two of the four idle furnaces of the works, one furnace having been running all along.

Sylvester & Co., Somerville Spike Works, whose office is at 8 Oliver street, Boston, advise us that they have purchased the interest of the late Arthur G. Thompkins in the Danvers Iron Works, Danversport, Mass., and shall continue to operate it in connection with their works at Somerville, Mass, as soon as the necessary repairs and alterations can be made.

Machinery.

The Westinghouse Air Brake Company of Pittsburgh, with works at Wilmerding, Pa., have declared the regular quarterly dividend of 5 per cent.

The National Water Tube Boiler Company of New Brunswick, N. J., have sold their plant of 1500 horse-power boilers, which they had at the World's Columbian Exposition, to the Ohio Steel Company, Youngstown, Ohio.

The property of the Auburn Stove Foundry Company, at Auburn, Maine, has been damaged by fire to the extent of $4[illegible],000.

The foundry plant of Baker & Shevlin, Saratoga Springs, N. Y., is at present rushed with machinery and devices for the big paper mills owned by George West in that section of the State.

The Penn Elevator Engineering Company is the name of a new concern applying for a charter of incorporation under the laws of Pennsylvania. The company are erecting at Bloomsburg, Columbia County, Pa., a two-story brick factory building, 50 x 200 feet, which they will equip with machinery of the latest and most improved design suitable for building elevators of all kinds. The ground floor will contain the machine shop and wood working department, and the upper floor will be devoted to paint and pattern shops, drafting and office rooms. The factory is conveniently situated near three railroads, viz: Philadelphia & Reading Railroad, Pennsylvania Railroad, and Delaware, Lackawanna & Western Railroad, a switch from the latter road entering the company's yard. Facilities for transit by water are also afforded by means of the Pennsylvania Canal, running to Baltimore. The officers of the company are George R. Stevens, president; John P. Casey, vice-president, and D. S. Cann, secretary. The two former were lately with Morse, Williams & Co. of Philadelphia, and the latter is a member of the firm of Cann & Saul, steel merchants, Philadelphia.

The Hercules Ice Machine Company are now running the Hercules Iron Works plant at Aurora, Ill. The Hercules Iron Works made an assignment July 10 last, owing to the entire loss of the Cold Storage Building located at Jackson Park, the amount of loss being in the neighborhood of $500,000. The assets of the company have been purchased by the Hercules Ice Machine Company, a new corporation organized for that purpose, having a capital of $500,000. Since the reorganization, about two months since, the company have contracted for about $100,000 worth of work, their business now being the manufacture of ice and refrigerating machines. They employ in ordinary times from 160 to 200 hands, and their machines are shipped to all parts of the Union and to foreign countries. The Hercules Iron Works shipped during the past year machines to Costa Rica and Cuba. The buildings of the various departments are arranged to be extended without any inconvenience, as none of the structures are now equal in extent to the original designs. The plant has a very excellent equipment of tools especially suited for the business, and the entire material used in the construction of the machines is made within their own works, except portions of the steam engine, which are purchased from the E. P. Allis Company of Milwaukee.

Plimpton & Son's foundry and machine shops, at Clearfield, Pa., have been burned at a loss of $5000.

About a year ago Cooperstown, N. Y., capitalists invested about $10,000 in the Maddox Wire Belting Company, the plant of which was removed from Massachusetts. The plant is now closed and is to be sold on a judgment for $400.

Eleven molders employed in the foundry department of Klotz & Kromer's machine shops, at Sandusky, Ohio, have quit work on account of a reduction in wages.

The Rand Drill Company's plant, at Tarrytown, N. Y., has resumed operations on full time.

The Frech Machine Company, manufacturers of metal working machinery, at 76 West Van Buren street, Chicago, made an assignment on the 9th inst. in favor of Hugo Pam, as assignee. Assets are scheduled at $5000 and liabilities $4000. The company attribute the failure to their inability to raise funds to meet the claims of several pressing creditors. The assets of the concern are not readily convertible into cash, as they consist largely of valuable patents and machinery.

E. C. Wehrfritz is building a machine shop at Little Rock, Ark.

The Nameless Iron Works of Shakopee, Minn., have begun the manufacture of a new machine called the one-roller disintegrator, to prepare clay for brick machines. It is estimated that it will feed enough clay to supply a machine manufacturing 100,000 brick in ten hours, preparing the clay from the bank for the brick machine to make a first class brick. The clay is not squeezed through rollers as is the case where two rollers are used, but is shaved.

The Reading Foundry, Reading, Pa., has closed down on account of a lack of orders.

The American Well Works, at Aurora, Ill, have just completed a new boiler plant for their own use, in which they have embodied a number of original features which secure very great economy. They are large manufacturers of boilers as well as of engines to be used with their well sinking machinery.

The J. M. Carpenter Tap & Die Company of Pawtucket, R. I., are now preparing a new line of stocks, taps and dies intended specially for bicycle work. These will be ready January 1 and will be of the same high grade as those now made by this company.

The Phosphor-Bronze Smelting Company, Limited, of Philadelphia, are removing their offices to their new foundry and smelting works at 2200 Washington avenue, in that city.

Maris & Beekley of 2343 Callowhill street, Philadelphia, have furnished two of their traveling cranes—10 tons and 5 tons capacity, respectively—to the New Jersey and Pennsylvania Concentrating Works, Edison, N. J.

The January dividend disbursements of five of the Westinghouse interests at Pittsburgh amounted to $508,500. This amount was distributed as follows: Westinghouse Air Brake Company, $250,000; Philadelphia Natural Gas Company, $112,500; Westinghouse Electric & Mfg. Company, preferred stock, $125,000; Union Switch & Signal Company, preferred stock, $6000; Standard Underground Cable Company, $15,000. It is stated that the business of the Westinghouse Electric & Mfg. Company for November slightly exceeded $500,000. Two thousand men are now on the pay rolls of the concern and are working full time.

A reduction of 15 per cent. in the wages of the employees of the foundry of the Allentown Rolling Mill, Allentown, Pa., has been made.

The Cleveland Machine Screw Company, Cleveland, Ohio, have sustained a loss of $10,000 by fire.

Hardware.

The Granite Filter Company have been incorporated at St. Louis, Mo. The capital is $20,000, $10,000 paid in. The incorporators are A. L. Emery, O. H. Wineger and Edward Morrison. The company will manufacture a filter invented by Mr. Emery.

The American Shear Company, Hotchkissville, Conn., manufacturers of shears and pocket knives, have shut down for the present.

The J. A. Wright Company of Keene, N. H., have been incorporated. They will manufacture polish. The capital stock is fixed at $30,000.

The striking molders of the Penn Hardware Company, Reading, Pa., held a meeting on the 12th inst., and decided not to return to work. They struck last August.

At a meeting of the National Cutlery Company, held in Rockford, Ill., on the 12th inst., Justin W. Meehan of Chicago was elected chairman and George B. Kelley of Rockford secretary. The necessary papers for incorporation have been forwarded to the Secretary of State. The capital stock of the new company is $75,000, all of which has been subscribed. The company will probably locate in Rockford, but if not will build their plant in Chicago.

The H. P. Nail Company, Cleveland, Ohio, have decided to shut down their works. Already some 200 or 300 men have been discharged, and in the course of the next few days all of the 700 men employed by the company will be thrown out of work. The shut down is attributed by the company to a lack of orders.

Des Moines Scale & Wire Works, Des Moines, Iowa, advise us that trade this fall, considering the depression of general business, has been very satisfactory. They manufacture wagon, track and hopper scales.

Cleveland Twist Drill Company, Cleveland, Ohio, expect to close down their factory for the holidays. This is their usual custom and they take advantage of the opportunity to take their inventory and do such general repairs as are necessary. At the present time they are running their factory full time but with a reduced number of hands. The company have a large stock of goods on hand, so that they will be able to fill all orders promptly during the time in which the factory is closed.

Walter W. Woodruff & Sons, Mount Carmel, Conn., manufacturers of coach and carriage hardware, are making a specialty of fine malleable iron castings from owners' patterns. Only best work will be done, and for this, it is claimed, their facilities are particularly well adapted.

Mobile papers state that J. J. Simmons of St. Louis, manufacturer of the Jewel refrigerator, is making arrangements for the transfer of his manufacturing operations to Mobile.

The Harry Svensgaard Bicycle Company of Fergus Falls, Minn., are in the hands of a receiver to close out the business. We are advised that there is a good bicycling opening in that part of the West, and that there will undoubtedly be a well selected stock of wheels and a complete bicycle outfit thrown on the market early in the spring at a very low rate. The business has been extensively advertised, and is known in the Dakotas, Montana, Iowa and Wisconsin.

Anglo-American Iron & Metal Company, 213 Pearl street, New York, have issued a circular in which reference is made to the reports which have been circulating in the trade to the effect that they are not in a position to promptly fill orders for cycle material. These reports they contradict most emphatically and intimate that they are energetically pushing their business.

The Lawrence Barbed Wire Factory is one of the manufacturing institutions in Kansas that has no occasion to complain of dull times, says the Lawrence *Gazette*. The wire drawing mill runs until 10 p.m., draw-

Hosted by Google

ing enough wire to supply the barbed wire mill running at full capacity day and night. Even with their largely increased plant, operated to its limit, they are unable to keep up with their orders. More room and more machinery are to be added within 60 days. The company recently began making bale ties and their business in this one item has grown beyond all expectations.

Wyeth Hardware & Mfg. Company, St. Joseph, Mo., advise us that while their business has suffered during the year on account of the general depression all over the country, they have recently completed and will by January 1 be settled in their new six story building, located at 609 to 621 North Second street in that city. This building has been specially arranged for the hardware business, and is fitted with the latest improved appliances. Electric light and steam plants have been put in. Side tracks and switches will be laid which will accommodate 40 cars. There are tracks in the building by which three cars can be loaded at one time. The company state that in their hardware and cutlery departments they will send out 25 traveling representatives about January 1. They will also send out 10 men to represent their saddlery department.

A correspondent at Akron, Ohio, mentions that about 90 per cent. of the manufacturing establishments in that city will start up on or about January 1, thus giving employment to a majority of the workingmen who have been idle for nearly six months. These establishments are those mainly of manufacturers of agricultural implements, most of whom look forward to increasing their output considerably.

Miscellaneous.

The Reading Traction Company, at Reading, Pa., have placed the order for their new car house with the Berlin Iron Bridge Company of East Berlin, Conn. The side walls will be of brick, the roof of iron. The building will be 85 feet in width and 180 feet in length The width is divided into two parts of 42½ feet each, a row of columns supporting trusses at the center.

The Heath Rail Joint Company of Superior, Wis., have secured an order for 14,000 joints, and have several other good sized orders in sight. Recent changes made in the machinery have economized the cost of production, so that the company now find themselves in a most prosperous condition.

The report that a cut of from 20 to 39 per cent. had been made in the wages of the employees of the Pullman Works, at Wilmington, Del., is denied by the superintendent. On the other hand, the wages of some of the men have been increased, while the force is being increased by 300 additional hands, bringing the number of employees up to 600 men.

Among recently authorized corporations in Illinois are the following: Cumming Foundry Company, Chicago; capital stock, $100,000; incorporators, Oscar Ludwig, R. D. Wardwell, William S. Cumming. Loretto Iron Company, Chicago; to mine iron ore; capital stock, $400,000; incorporators, Thomas J. Callinan, William H. O'Brien and Morris St. Paul Thomas. Fuller Incandescent Heat & Light Company, at Chicago; capital stock, $1,000,000; incorporators, J. T. Kretzinger, C. E. V. Akerberg, M. F. Gallagher. Barnes Car Company, at East St. Louis; capital stock, $1,000,000; incorporators, Adiel Sherwood, Joseph B. O'Connor, Charles Voyce. Keystone Cash Register Company, Chicago; capital stock, $250,000; incorporators, Charles F. Ansell, J. D. Sperry, Fred Kubec. Universal Electric Heat & Light Company, Chicago; capital stock, $100,000; J. T. Kretzinger, C. E. V. Akerberg, M. F. Gallagher. Turney Electric Mfg. Company, Chicago; capital stock, $75,000; incorporators, Eugene T. Turney, Walter H. Crowdus and William E. Mason.

The Gilbert Car Works, at Troy, N. Y., have shut down.

The Wilbur F. Washburn Brass & Iron Works, at Yonkers, N. Y., have temporarily suspended. Insufficient capital and slow collections were the cause.

The business of C. Aultman & Co., manufacturers of engines, threshers and other farming implements, at Canton, Ohio, has gone into the hands of receivers. The company are said to be solvent, as their assets are not far from $2,700,000, while their liabilities are about $1,000,000.

The Philadelphia Natural Gas Company of Pittsburgh have declared the regular quarterly dividend of 1½ per cent.

TRADE REPORT

Deeper gloom is settling down on the Iron trade, and there are few crumbs of comfort for those engaged in this great industry. Pittsburgh and its adjacent districts are enjoying the melancholy distinction of crowding competing sections to the wall and threaten, with a further lowering of wages at some of the mills, to drag the level of prices even lower. In Eastern Pennsylvania the Iron manufacturers have been appealing quite successfully to their local financial institutions to withdraw accommodations from the Western rivals, and consumers throughout the Eastern territory are being plied with arguments to show them the danger of delivering themselves into the hands of distant producers.

It is really only one branch in which the widely heralded Eastern campaign of a Pittsburgh concern has been signally unsuccessful, and that is in the Steel Rail trade. The fruit of this victory by the Eastern competitor is the starting double turn on the part of the Lackawanna mill, with a heavy tonnage of orders on hand. The Colorado mill has captured an order for 26,000 for the Union Pacific Company at a price which, its officers state, leaves some profit. They intimate that they are figuring on other work too.

In Pig Iron the general markets are very dull so far as Foundry grades are concerned. The attitude of the Southern producers will not be thoroughly tested until some of the larger Cast Iron Pipe contracts come into the market which are now under negotiation. Among them it may be interesting to mention is one for 8000 tons for Mexico. From Philadelphia comes the significant news that capitalists close to the iron trade have bought considerable quantities of Pig Iron for investment. It is not believed that the holdings of the Crane Company, which are to be sold, are large enough to create a lasting impression.

In Pittsburgh Gray Forge has dropped to $10, while Bessemer Pig has sold at $10.75.

Steel Billets are squarely down to $16.50 at Pittsburgh, and are correspondingly weak in the East. Wire Rods, for which the off season has come, are offered at $24 at Western mills. In connection with the Wire trade it may be mentioned that the 25,000 keg order for Wire Nails for the Standard Oil Company was captured by a local mill. Every important concern in the country fought for the contract. In the structural trade a moderate amount of work is coming up. A battle royal will probably be fought next month at Chicago for the elevated work which will be given out there. The demoralization in prices for all rolling mill products continues.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St., PHILADELPHIA, Pa., December 19, 1893.

The situation as regards Iron and Steel in this vicinity is in a most unsatisfactory condition, and unfortunately there is not much prospect of any immediate improvement. Steel has supplanted Iron to such an extent that the latter is almost totally ignored at most of the large mills, and as the West claims to be making Steel at a much lower cost than can be done here, the bulk of the business is taken by mills west of the Alleghenies. It is also a fact that Bessemer Pig is being shipped from Pittsburgh to this market, and if things go on as they have been doing during the past six months there will be very little left for either mills or furnaces hereabouts. These conditions are probably only temporary, but in the meanwhile they are terribly trying, especially as no definite opinion can be formed as to the time or the manner in which relief will be found. There are all sorts of theories, but the one generally accepted is that the business is being done at a loss and sometimes from financial necessity rather than as ordinary business operations. Be that as it may, manufacturers of the highest standing, and with plants equipped with all modern improvements, say they cannot come anywhere near the prices quoted from Pittsburgh, and will cease operations rather than attempt to meet competition of that character. What may be done after the turn of the year nobody seems to know, but for 1893 business is practically at an end, and with less work in hand than at any time within many years, probably not since 1873, and perhaps not then.

Pig Iron.—Business could hardly be duller than it has been during the past week, but neither buyer nor seller seems to care much about it. Consumers have no desire to load up under present conditions, neither are producers inclined to enter many orders at such prices as the market would at this time afford. Consumers have an idea that there is a possibility of prices being lower, while there is no immediate probability of them being higher. Producers are satisfied that they cannot continue in business if further concessions are required, neither are they willing to tie themselves to heavy engagements at current market rates, the natural outcome being a "stand off" on both sides. Taking an outside view of the situation, it would be hard to suggest any course other than that adopted by both of these interests. The chances are that things will drift along for some time without any material change in prices, although considering the increase in production and the almost total suspension of consumption during the next two or three weeks, prices may go a little lower before there is anything like liberal buying. Ultimately there can be no question as to the course of the market, but how long before the turning point is reached is something no one can foresee. It is significant, however, that some heavy speculative purchases are being made by capitalists who are closely identified with the trade. Money has been quietly invested wherever it was most needed and whenever prices were made attractive. Doubtless the figures were very low, but the Iron was bought as a speculation, and would not have been bought unless special inducements were offered. These, with purchases made some two or three weeks ago by legiti-

Hosted by Google

mate consumers, have relieved the market temporarily, so that while there is more Iron being made, pressure to sell is as yet no greater than it has been all along. General quotations for Philadelphia deliveries are about as follows:

No. 1 Foundry	$13.75 @ $14.25
No. 2 Foundry	13.00 @ 13.25
Standard Gray Forge	11.75 @ 12.25
Ordinary Gray Forge	11.25 @ 11.50

Steel Billets.—Demand very light, although prices are lower to-day than ever. Good buyers could place orders at $19 @ $19.25, delivered, for 1000 ton lots, but current requirements are very small, and chiefly for small lots, 50 to 100 tons, and sometimes 200 to 300, at prices varying from $19 50 to $19.75, delivered. The feeling is very weak, however, and lower prices are confidently expected before any large amount of business can be secured.

Finished Material.—Small lots are in pretty good demand, but large orders are not in the market at present. Most of the mills will shut down at the end of the week, and are not likely to start up until after the turn of the year, although in the meanwhile there is very little inquiry for any but immediate deliveries, so that there is nothing definite in regard to the amount of work likely to come out after the holidays. The outlook is unfortunately far from encouraging, and it is to be feared that the depression will extend further than people are inclined to expect, as there is nothing in sight that will be likely to bring immediate relief. Prices are at the very lowest point yet reached, and on bids for good sized lots there is little doubt that orders could be placed at still further concessions. Nominal quotations are about as follows:

Grooved Skelp, delivered	1.40¢	@ 1.45¢
Best Refined Bars	1.40¢	@ 1.45¢
At interior points	1.30¢	@ 1.35¢
Tank Steel	1.45¢	@ 1.55¢
Heavy Plates	1.50¢	@ 1.60¢
Shell	1.60¢	@ 1.75¢
Flange	1.90¢	@ 2.00¢
Angles	1.60¢	@ 1.70¢
Beams and Channels	1.65¢	@ 1.80¢

Old Material.—Market dull and lower. There is no demand of any account, and as holders are inclined to realize, purchases can be made at extremely low figures—so low, indeed, that they sometimes are hardly enough to pay freight and handling. General quotations are about as follows:

No. 1 Wrought Scrap, delivered	$11.50	@ $12.00
Machinery Cast, delivered	10.00	@ 11.00
Heavy Steel Scrap, delivered	11.00	@ 12.00
Old Iron Rails, delivered	14.00	@ 14.50
Old Street Rails, delivered	15.00	@ 16.00
Wrought Turnings, delivered	9.50	@ 10.00
Cast Borings, delivered	6.50	@ 7.00

Cincinnati.

(By Telegraph.)

Office of *The Iron Age*, Fifth and Main Sts., CINCINNATI, December 20, 1893.

Business in Pig Iron during the week ending to-night has been in the main confined to filling small orders from the jobbing foundries in this district, which only in a few instances reached as high as 500 tons. There was no large demand either for spot or forward delivery, but there were moderate sales of No. 2 Foundry Coke Iron at $7.90 @ $8 ℔ ton, f.o.b. Birmingham, which is a decline of 25¢ @ 35¢ ℔ ton from the prices obtained two or three weeks ago. There were moderate orders from the East for various kind of Iron, yet none of them were large, and the aggregate sales of all kinds were not important, but were larger than in any week in the recent dull times. The pending of tariff revision tends to restrict purchases of Pig Iron, and there appears to be an undertone of confidence that there must be a pretty fair consumptive demand when the rates are once settled, if they are not made so low as to destroy our home industries, and it is surely not probable that the dominant party will carry the matter so far as that. Quotations are as follows:

Foundry.

Southern Coke, No. 1	$12.25 @ $12.50
Southern Coke, No. 2	10.75 @ 11.00
Southern Coke, No. 3	10.50 @ 10.75
Ohio Soft Stone Coal, No. 1	15.50 @ 16.00
Ohio Soft Stone Coal, No. 2	14.50 @ 14.75
Lake Superior Coke, No. 1	15.00 @ 15.25
Lake Superior Coke, No. 2	14.00 @ 14.25
Hanging Rock Charcoal, No. 1	18.50 @ 19.00
Hanging Rock Charcoal, No. 2	17.50 @ 18.00
Tennessee Charcoal, No. 1	14.00 @ 14.25
Tennessee Charcoal, No. 2	13.00 @ 13.25

Car Wheel and Malleable Irons.

Standard Southern Car Wheel	17.75 @ 18.00
Lake Superior Car Wheel and Malleable	17.00 @ 17.25

Forge.

Gray Forge	10.00 @ 10.50
Mottled Coke	9.75 @ 10.00

Chicago.

(By Telegraph.)

Office of *The Iron Age*, 59 Dearborn street, CHICAGO, December 20, 1893.

Pig Iron.—Trade in all kinds of Coke Iron is quiet, but there are indications that after the new year opens a number of concerns will be in the market for a considerable quantity of Iron. Consumers are now exceedingly careful not to take any more stock than is absolutely necessary to meet their requirements. Orders for single carloads in almost every case name definite quantities, which are not to be exceeded. Quotations at present are purely nominal and indicate the prices asked for small lots only, and they can be shaded materially on round lots. Offers are being made of Iron from second hands or from the stock of bankrupt foundries at very low rates. Transactions in Lake Superior Charcoal have been a little more frequent. Several lots were sold the past week to malleable companies for immediate shipment at a slight concession for spot cash. Quotations are now as follows for cash:

Lake Superior Charcoal	$15.50 @ $16.00
Local Coke Foundry, No. 1	13.50 @ 14.00
Local Coke Foundry, No. 2	12.75 @ 13.00
Local Coke Foundry, No. 3	12.25 @ 12.75
Local Scotch	14.00 @ 14.50
Ohio Strong Softeners No. 1	15.50 @ 16.00
Southern Silvery, No. 1	@ 13.75
Southern Silvery, No. 2	@ 13.25
Southern Coke, No. 2	12.15 @ 12.40
Southern Coke, No. 3	11.65 @ 11.90
Southern, No. 1, Soft	12.40 @ 12.65
Southern, No. 2, Soft	11.65 @ 11.90
Tennessee Charcoal, No. 1	16.00 @ 16.50
Southern Gray Forge	10.60 @ 10.85
Alabama Car Wheel	18.25 @ 18.50
Jackson County Silvery	16.00 @ 16.50
Other Ohio Silvery	15.00 @ 15.50

Bars.—The Bar trade is disappointed in the condition of the car industry. The car orders so far placed have not brought out any business in car specifications for Bars. General trade is fair, but prices are weak and the bottom has apparently not been struck. New mills further West are demoralizing the market by selling at lower than Chicago prices. Soft Steel is also crowding Bar Iron and manufacturers are in some cases offering Iron and Steel at the same price and with the same scale of extras. Quotations on mill shipments are now 1.30¢ @ 1.35¢, Chicago, half extras, for Soft Steel. Jobbers are selling moderate quantities from stock with prices ranging from 1.55¢ to 1.65¢ according to quantity.

Structural Material.—It is reported that the Milwaukee viaduct has been awarded to the Detroit Bridge & Iron Works, in which case, it is said, the material will be furnished by the Cleveland Mill Company. The Beam market is quiet, but considerable figuring is being done on building projects, which are mainly located outside of the city. An important extension of the Lake street elevated is expected to be ready for bids in January. Quotations are as follows, Chicago delivery: Beams 1.65¢ @ 1.75¢; Tees, 1.90¢ @ 2¢; Angles and Universal Plates, 1.60¢ @ 1.65¢. Small lots are sold from stock at an advance of 10¢ @ 15¢ ℔ 100 above these prices.

Plates.—A slightly better movement is reported both for mill orders and in small lots from stock. The better makers are picking up more business, and prospects are a trifle brighter in this line. Mill shipments, Chicago delivery, are quoted as follows: Tank Steel, 1.60¢ @ 1.70¢; Shell Steel, 1.80¢ @ 1.90¢; Flange Steel, 2¢ @ 2.10¢; Fire Box, 2.75¢ @ 5¢. Store prices now prevail as follows: Iron or Steel Sheets, Nos. 10 to 14, 2¢ @ 2.10¢; Tank Steel, 1.90¢ @ 2¢; Shell Steel, 2 20¢ @ 2.40¢; Flange Steel, 2 50¢ @ 2.65¢; Boiler Tubes, 70 and 5 % off.

Sheets.—Very little business is doing in Black Sheets, but some inquiries are reported for shipment during the early months of the coming year. Prices remain as before at 2.65¢ @ 2.70¢, Chicago, for mill shipments of No. 27 Common, with small lots from stock selling at 2.90¢ @ 3¢. An improved tone is noted in mill business in Galvanized Iron. Prices, however, are unchanged and mill shipments of Juniata are quoted at 70 and 10 and 10 % and with small lots at 70 and 5 % @ 70 and 10 %. Good transactions have taken place in Sheets with prices ranging from 25 % to 30 % off, according to quantity.

Merchant Steel.—While new business is light, as usual at this season of the year, specifications are going forward rather freely to the mills on season contracts. Mill shipments, Chicago delivery, are quoted as follows: Smooth Finished Machinery, Tire and Open Hearth Spring Steel, 1.90¢ @ 2¢; Ordinary Bessemer Machinery, 1 60¢ @ 1 65¢; Ordinary Bessemer Tire, 1.55¢ @ 1.60¢; Ordinary Tool Steel, 6¢ @ 7¢; Specials, 12¢ and upward.

Billets.—Business in this line is quiet, with quotations nominally $19.25 @ $19.50.

Rails and Track Supplies.—The large business in Rails known to have been placed in the East and the order just given to the Colorado Fuel & Iron Company for 26,000 tons by the Union Pacific Railroad inspire strong hopes of good buying by the railroad systems making their headquarters here, but so far the local railroad interests have not been inclined to enter the market. The Rail mills are, however, making repairs and getting matters in shape so as to be ready to start as soon as sufficient business is secured. Quotations range from $25 to $27 for Steel Rails, according to quantity; 1.55¢ @ 1.60¢ for Splice Bars; 2.55¢ @ 2 60¢ for Track Bolts with Hexagon Nuts, and 1.90¢ @ 1.95¢ for Spikes.

Old Rails and Car Wheels.—No transactions are reported in Old Iron

Hosted by Google

Rails. The railroad companies having stocks on hand are asking $14, which is considered a prohibitory price by dealers and consumers. Old Steel Rails are also neglected, with nominal quotations $7.50 @ $10, according to length. Transactions are reported in Old Car Wheels, but only in a speculative way. Consumers are doing nothing.

Scrap.—Dealers report very little inquiry at present. Consumers are holding off until after the close of the year. Under the circumstances all quotations are nominal, but are continued in the absence of transactions. Quotations are as follows: No. 1 Forge, $11; No. 1 Mill, $8.25 @ $8 50; Sheet Iron, $4.50; Pipes and Flues, $8; Axles, $16; Horseshoes, $11; Fish Plates, $12; Spikes and Bolts, $10; Cast Borings, $4.50; Wrought Turnings, $6.50; Axle Turnings, $8; Heavy Cast, $9 50; Stove Plate, $7.75; Malleable Cast, $8; Mixed Steel, $7, gross ton; Leaf Steel, $14 50.

Metals.—Lake Copper is quiet, but prices are firm at 11¢ for car lots, and 11.25¢ for small lots. Casting Copper is quoted at 10½¢, but the local demand has fallen off. Spelter is dull and weaker, being quoted at 3 50¢ @ 3 55¢. Pig Lead dropped during the week to 3 05¢, but has reacted to 3.10¢, although the demand is rather light.

St. Louis.

(*By Telegraph.*)

Office of *The Iron Age*, Bank of Commerce Building, St. Louis, December 20, 1893.

Pig Iron. — The conditions prevailing last month continue, dullness, amounting almost to stagnation, being the only feature of the market. Consumers are cleaning up their stocks preparatory to the annual inventory, and will not be in the market until after the turn of the year. Prices are unchanged, as follows, for cash, f.o.b. cars St. Louis:

Southern Coke, No. 1 Foundry	$13.25 @ $13.50
Southern Coke, No. 2 Foundry	11.50 @ 11.75
Southern Coke, No. 3 Foundry	10.75 @ 11.00
Southern Gray Forge	10.25 @ 11.50
Southern Car Wheel	17.25 @ 18.25
Lake Superior Car Wheel	16.50 @ 17.00
Ohio Softeners	16.00 @ 16.50

Bar Iron.—There is no improvement noticeable in this department; sales are made from mill as low as 1.35¢, half rates, f.o.b. St. Louis, and it is intimated that this price has been shaded. Jobbers report a dull trade at 1.70¢ @ 1.80¢.

Barb Wire. — The demand has dwindled down to almost nothing and prices have weakened in sympathy. Mills quote Painted at $1.95 @ $2, with Galvanized at 40¢ ℔ cwt. advance. Jobbers report sales as being extremely light and quote Painted at $2.10 and Galvanized at $2 50.

Wire Nails.—The Wire Nail market seems to be practically demoralized, and carload lots are quoted as low as $1.30, and in extreme cases $1.25 is made. Jobbers ask $1.45 @ $1.50.

Rails and Track Supplies.—Trade in this department continues dull and prices are unchanged, as follows: Splice Bars, 1.65¢ @ 1.70¢; Spikes, 1.95¢ @ 2¢; Bolts, Square Nuts, 2.10¢; with Hexagon Nuts, 2.50¢; Links and Pins, 1.85¢ @ 1.90¢. Old Iron Rails, are unchanged at $13.50; Steel Rails are looking up a little and negotiations are in progress for several good orders. We quote $26.50. @ $27.

Pig Lead.—This metal seems to have settled down to a 3¢ basis. Producers refuse to entertain a lower figure than this and consumers are now paying this price. The transactions are few and not heavy.

Spelter.—Outside of an occasional carload order there is nothing to note. Sellers ask 3 50¢ @ 3 55¢, which consumers would doubtless willingly pay if they had any use for the metal at this time, but it appears they have not. The sales for delivery next year are not heavy.

Pittsburgh.

(*By Mail.*)

Office of *The Iron Age*, Hamilton Building, Pittsburgh, December 19, 1893.

The same unfavorable report of the condition of the Iron and Steel trades must be presented again this week. As we get to the close of the year the decrease in amount of business being offered becomes more marked, and as a direct consequence competition becomes keener and prices are shoved lower. For some time past the condition of the market has been such that there is no established price for anything. A quotation on a certain article based on an actual sale given this week may be considerably out of the way next week. The facilities of some of the larger Pittsburgh establishments to turn out material at a low cost have certainly been severely tested during the past two or three months. Nevertheless they go right on taking order after order at prices that other concerns could not touch, and seem to regret that they cannot take everything that is offered. With new and lower wage scales to go into effect in several of the plants of a large Pittsburgh maker at the first of the year it is not improbable that the severest competition is yet to come. No improvement in business can come until after the first of the year, but it is the universal hope that the long desired turn in trade is not far off. The present condition of business is unnatural and cannot always exist.

Pig Iron.—The only new event of the week was the agreement made by the city furnaces to lower the price of standard Gray Forge Iron 50¢ ℔ ton, or from $10.50 to $10, Pittsburgh. This price means $9 35 in the Mahoning Valley and must be crowding cost very hard. Notwithstanding the reduction in price there has as yet been no perceptible increase in demand, but this may come later on. Bessemer is also in very light demand with prices a shade lower. One of the Lucy Furnaces has gone in after being banked some four or five months. Pittsburgh is now making nearly as much Iron as ever before in her history, and this fact, more than anything else could do, proves the superiority of this district over all other places for the cheap production of Pig Iron. We quote as follows:

Neutral Gray Forge	$10.00 @	cash.
All-Ore Mill	10.00 @ $10.25	"
No. 1 Foundry	11 75 @ 12.00	"
No. 2 Foundry	11.25 @ 11.50	"
Bessemer	10.75 @ 11.00	"

We note a sale of 2000 tons of Bessemer for first three months of next year at a price equal to about $10.75, delivered at buyer's mill. Also a sale of 2000 tons of low phosphorus Bessemer, same delivery, at a shade under $14, delivered.

Ferromanganese.—Very dull. We quote $51.50 @ $52, delivered, for 80 % domestic.

Structural Material.—While a good deal of new work is coming up in the West, very little new business is being offered from this vicinity. Past events warrant the statement that Pittsburgh will get its full share of the trade, regardless of where deliveries may have to be made. While we repeat quotations of last week it should be noted that these are only nominal and continue to be shaded as occasion requires. We quote as follows: Beams and Channels up to 15 inches, 1.45¢ @ 1.60¢, according to size of order; Angles and Universal Plates, 1.45¢ @ 1.50¢; Tees, 1.70¢ @ 1.75¢.

Plates and Sheets.—Two good sized orders for Tank Steel were placed here last week at a price that certainly meant little or no profit to the seller. Demand in general is quiet, but occasionally a good order comes up, which generally calls out from makers quotations which a few months since would have been thought impossible. We quote as follows: Tank Steel, 1.35¢ @ 1.37½¢; Shell, 1.55¢ @ 1 60¢; Flange, 1 65¢ @ 1 75¢; Marine, 1.75¢ @ 1.85¢; Ordinary Fire Box, 1 85¢ @ 1 95¢, and Railroad Fire Box, 2¢ @ 2.15¢. The Sheet trade is at a standstill and we make nominal quotations as follows: No. 24 Soft Steel Sheets, 2.40¢; No. 26, 2.50¢, and No. 27, 2.60¢.

Steel.—Business is very light and no improvement is expected until after the first of the year. On account of the limited way the mills are being operated, a purchase of 500 tons of Billets now is equivalent to a purchase of 2000 tons when consumers were operating their plants to full capacity. There is no established price. For a fair sized order, with favorable terms of settlement, $16 50 at maker's mill could be done. For small orders $16.75 @ $17 is asked. We note a sale of 300 tons at $17 at maker's mill for January delivery. The new Bessemer plant of the National Tube Works Company is now in successful operation.

Rails.—The local mill was on Billets last week, but went back to Rails yesterday. Nothing new developed during the week.

Muck Bars.—We quote at $20.50 @ $21, delivered at buyer's mill, for best grades. We note a sale of 500 tons at $21, delivered, for January. Demand is very light.

Bars.—The demand shows a marked falling off this month, and mills here and in the Valley are running very light. Very little stock is being made, owing to the uncertainty of the future. Prices are weak, and for good orders with desirable specifications exceptionally low prices continue to be made. Valley mills continue to quote 1.30¢ at mill for Bar Iron, which is shaded, however, for desirable specifications. Soft Steel Bars are quoted at 1.30¢ @ 1.35¢. These prices are also shaded to some extent.

Wire Rods.—Nothing new developed during the week and we continue to quote $24.50, at mill, for delivery in the first quarter of next year. This price would be shaded for desirable business.

Skelp Iron and Steel.—We quote Grooved Steel Skelp at 1.10¢ @ 1.15¢; Sheared, 1.20¢ @ 1.25¢; Grooved Iron Skelp, 1.30¢ @ 1.35¢; Sheared, 1.45¢ @ 1.50¢.

Hosted by Google

Barb Wire.—As is usual at this season of the year the demand is light, but it is expected that orders for delivery next spring will soon be placed. In fact, some business of this nature has already been done. We quote as follows: Four Point Galvanized 2 15¢ @ 2 20¢ in carload lots, and 2.25¢ @ 2.30¢ in less quantities. We quote Plain Wire at 1.40¢ @ 1.45¢ for Nos. 6 to 9 in carload lots.

Wire Nails.—Business has dropped off considerably during this month, and as a result one large mill has gone on single turn, while another will probably close altogether as soon as orders now on hand have been filled. Makers state that the probable passage of the Wilson bill is causing much of the uncertainty surrounding the future of the Wire Nail trade. We quote Wire Nails at $1.15 in carload lots at mill. Cut Nails are in fair demand and are ruling at 95¢ @ $1, at mill, according to nature of order.

Connellsville Coke.—A number of contracts for Furnace Coke are now under negotiation and will probably be closed this week or next. As yet but little has been done in this direction, furnaces holding off to some extent. For the week ending December 9 there were 8425 ovens in the Connellsville region in blast and 9088 idle, with a total estimated production for the above week of 79,750 tons. We continue to quote Furnace Coke at $1.10, Foundry at $1.30 to dealers and $1.45 to consumers, Crushed Coke $1.75 to consumers, all in tons of 2000 lb, f.o.b. cars in Connellsville region.

Financial.

The last weeks of the fast closing year bring little indication of solid improvement in the general business situation. Trade and speculation continue alike dull. Announcements of suspension of work in mills and factories are again an unpleasant feature of the daily press reports, and the large volume of unemployed labor increases rather than diminishes. President Gompers of the Federation of Labor places the number of the unemployed at 3,000,000, and many of them have but small prospect of work during the entire winter. In numerous lines of trade and manufacture in which distinct signs of improvement were visible a few weeks ago, a partial relapse to dullness seems to have set in. This is especially true of the woolen and textile trades, as well as in the leather, hat, glove and other cognate industries, which are suffering from severe depression. At the same time supplies are becoming exhausted after months of reduced production, and the pressure of actual needs has induced a moderate activity in certain lines of trade, notably the metal and provision industries, which, however, does not counterbalance the unfavorable features displayed by the general trade reports.

Railway earnings, a sure gauge of the general business condition of the country, make a poor showing for the first weeks of this month, and as the bulk of the grain traffic has already been handled for this season, the roads which depend largely on that freight for their earnings are unlikely to make a better exhibit of returns in the near future. The *Financial Chronicle* computes the gross earnings of 130 railroads for November at $46,610,334, a decrease of $3,331,411 as compared with the same month of last year. From January 1 to November 30 124 railroads earned $479,912,167, a decrease of $6,533 360 as compared with the corresponding period of last year. The aggregate gross earnings of all roads reporting for the first week in December show a decrease of 13.3 % as compared with last year, the loss being larger than for any week since last September. This unfavorable average is also fairly reflected in the returns which have come in for the second week of the month.

Business failures in the United States last week, as reported by *Bradstreet's*, numbered 337, against 383 in the previous week and 298 a year ago. *Dun's Review* makes the failures for the week number 339 in the United States, against 279 last year. The list for the week includes seven banks, with one of the oldest private banks for $500,000, an agricultural machinery establishment for $1,000,000, an iron works for $500,000, a heavy tobacco dealer for $500,000, a lumber concern for $150,000 and a dry goods concern for $150,000, making $2,500,000 for five failures. The current week has already seen one or two further failures of magnitude, which will bring the record for the month up to a very heavy figure.

The monthly statement of exports and imports for the month of November shows a large balance of trade in favor of this country, exports reaching $90,000,000, while imports were only $49,000,000. About the most notable change of the week in the financial world is found in Saturday's statement of the New York banks, which shows for the first time in many weeks an actual decrease in the surplus reserve. The loss, however, was only $400,000, and the surplus still stands at $78,000,000, insuring a continuance of the present low rates of interest. The exports of specie made last week—which have not been supplemented this week, in spite of expectations—were easily counterbalanced by receipts of currency from the interior, which kept up to about the average of the former week. A gratifying feature of the statement is the fact that loans and discounts show a further increase of $3,078,000. This is, however, described as largely on warehouse receipts for grain and cotton. Stock Exchange loans make still but a small figure, and the demand for money from manufacturing and other interests continues slight. Meanwhile the banks continue in a more or less congested condition, which, although it may not be increased in intensity, shows no present signs of material relief. Until the confidence of the country is restored by the removal of the existing condition of uncertainty in regard to the tariff and financial legislation, no practical man expects to see any general recovery of industry and speculation.

The loan market maintains its easy condition, money on call being in abundant supply at rates ruling from 1 to 1½ per cent., averaging the lower figure, with renewals at the same rates. Call loans on actual stock collateral were even made as low as ½ per cent. last week. The supply is large from many sources, both of call and time money. The latter accommodation is freely offered at about 2 per cent. from 30 to 60 days, 3 per cent. from 90 days to 4 months, and 3½ @ 4 per cent. for 6 months. The demand does not, however, increase, and would-be lenders have the usual difficulty in placing their money. Mercantile paper is in good demand, and the best kinds find a ready market. The supply is not large. Ruling rates are 3¼ @ 4 per cent. for indorsed bills, 4½ @ 5 for best single names, and 5 @ 5½ for others.

Business on the Stock Exchange has been barren of interest during the greater part of the week. Speculation continues confined almost entirely to professional traders, and the volume of transactions has been very narrow outside half a dozen stocks. Sugar received some attention from the professionals at the close of last week, and rose sharply several points for some unexplained reason, easing off again to its former level during the present week. Saturday's market closed dull and depressed, opening on Monday in a similar condition. A mysterious trouble in New England shares on the latter day, due to large selling orders of that stock, served to rouse the market. Many of the other railroad stocks declined in sympathy, but not to the same extent as New England, which on Tuesday suffered a further sharp fall of 5 points, selling a trifle under 20, as against 30 a week ago. A drive was made by the bears on the Vanderbilt stocks, St. Paul and other issues, but the market maintained a gratifying strength throughout, closing firm, with prices showing but slight declines. The outside fluctuations in the more active stocks are shown in the following list, together with closing prices on December 20:

	Highest.	Lowest.	Closing, Dec. 20.
Am. Sugar Ref.	84	79½	81⅛
Atchison, T. & S. Fé	19⅝	17⅜	17¾
Balt. & Ohio	71⅓	70	70¾
Chicago Gas	68½	64	64⅛
Chic., B. & Q.	78⅝	76	76¾
Chic., Mil. & St. Paul	63⅜	59⅛	60
Chic., Rock Isl. & Pac.	68¾	65⅝	66¾
Del. & Hudson	135⅝	131¼	131¼
Del., Lack & Western	164¾	160	162½
Gen. Electric	39⅓	35¾	36¾
Lake Shore	126⅜	121	123
Louisville & Nashville	50	48½	48⅝
Manhattan	129½	125	127⅓
Missouri Pacific	24⅞	23	23
National Lead, Common.	26	23⅛	23¾
New Jersey Central	117	116	116
New York Central	102	99⅝	100
N. Y., L. E. & Western.	15⅝	14⅞	15
Northern Pacific, Pfd.	22¼	19¾	20
Philadelphia & Reading	20⅝	18⅝	18¾
Richmond & West Pt., Terml	2¾	2⅓	2¾
St. Paul & Omaha	38½	36¼	37
Union Pacific	21⅝	19⅜	20
Western Union	88⅜	85	85⅛

Railway and miscellaneous bonds have not been in request to the extent of the business in these issues of the past few weeks. The first-class, paying bonds have, in fact, been generally absorbed, and there is no real demand for those of a speculative kind. The market closes weak, with prices showing a considerable decline. Government bonds are firm, the latest quotations being as follows:

	Bid.	Asked.
2s, 1891, registered	95½	.....
4s, registered	113¼	114
4s, coupon	114½	115¼

The market for sterling exchange has been firm and active, but still below the gold exporting point. There is a good inquiry from remitters, but the receipts of commercial bills, which have been moderately large, have largely met the increased demand. Actual business was done on Wednesday at $4 84½ @ $4.85 for 60 days, $4.86¾ for demand, $4.87½ for cables and $4.83¾ @ $4.84 for commercial. Domestic exchange on New York is quoted as follows: New Orleans, commercial 125 discount, bank par; Charleston, buying $\frac{1}{16}$ discount, selling $\frac{1}{16}$ premium; San Francisco, sight 5, telegraph 10 premium; Savannah, buying ⅛ discount, selling par a ⅛ premium.

Bar silver closed in London on Wednesday at 32$\frac{15}{16}$ pence, and in New

Hosted by Google

York at 70⅛¢ per ounce. Nearly 1,000,000 ounces of the metal have been exported during the week by New York houses.

Shipments of anthracite coal for the month of November were nearly 4 000,000 tons, an increase of 150,000 tons over those of the same month of last year.

Wheat rules at the lowest prices known, with shipments below the average. Corn is stronger on a reduction of the earlier crop estimates, with some considerable export sales. Cotton prices, while continuing low, have experienced some advance during the week on free buying for export account.

Metal Market.

Copper.—Business has been quiet throughout the week. Prices have undergone no radical change, but quotations made in various sources are considerably apart and leave a ripple on the surface that seems to have a rather annoying effect in more quarters than one. Copper was supposed to be well under control and sellers who represent the producers profess to maintain something like uniform prices. In some quarters it is denied that there is any understanding or agreement and that prices have not been cut below a level that is supposed to represent sellers' ideas of value. There is what may be termed strong circumstantial evidence that, whatever the surface appearances may be, the market is slightly free from restraint and not particularly strong as viewed from the statistical position. Producers of most brands of Lake Superior Ingots quote 10½¢ and claim to be sold ahead. Lots from second hands could have been secured at ⅛¢ less, however, and on the Metal Exchange there were offers to sell at 10.30¢ @ 10.35¢ for January delivery. Electrolytic is quoted at 9⅞¢ @ 10¢. and ordinary casting stock at 9½¢ @ 9¾¢, according to brand and quantity, but those prices represent sellers' idea of value rather than actual trading basis where large lots may be involved.

Pig Tin.—The movement in prices has been very narrow, and the line of value is practically the same at this writing as it was a week ago. Speculation remains dormant, pending developments in the tariff matter or other incentive. Dealers have purchased cautiously, and consumers have bought even more sparingly than usual at this season of the year. The bulk of business was at prices on the basis of 20.50¢ net cash for Straits, in 10-ton lots, near future delivery. Semi-official data show that 1450 tons were shipped from the Straits to Great Britain and America during the first half of December, besides 375 tons to Continental Europe, against a total of 655 tons during the corresponding period last year. Since July 1 about 770 tons have arrived here, the greater portion of which is in bond, and there are now about 650 tons afloat for this point.

Pig Lead.—Dealings have been on a very moderate scale and there is no sign of livelier demand, except perhaps in a speculative circle, where it not frequently happens that "demand" is nicely timed for effect upon prices. In other words, the best bidding has been from sources in which manipulation is common. Consumers have been influenced very little up to the present time. In any event they have purchased moderately and seem to have given little more than passing attention to the speculative manouvering. The sales effected were chiefly at 3 20¢ @ 3 22½¢ for carload and larger lots, near future delivery. Bullion price has been down to 3.10¢ during the week and moved up to 3.20¢ subsequently, while 3.27½¢ for January and 3.30¢ for February were bid on the Exchange.

Spelter.—Western brands are very irregular in price at the present time. Some may be had at 3 70¢, while 3.80¢ is generally quoted for what is classed as prime and 3.90¢ reported paid for choice. The demand is slow and hesitant. The offering is uneven. Upon the whole the market shows rather poor form, and a turn for the better is dependent in a good measure upon the policy of producers in the matter of restricting their output.

Antimony.—There has been only a moderate business doing and prices are barely steady at 9½¢ for Hallett's and 10¢ for Cookson's in round lots.

Tin Plate.—In some quarters very fair sales were reported for ordinary Coke Plates for spring and summer delivery. Such reports, however, were few and strictly the exception. The general statement was that business has been slow in both prompt and forward deliveries. Prices show little change, but the buyer seems to have gained advantage on such changes as have taken place, more particularly on spot stock. Spot quotations are as follows: Coke Tins—Penlan grade, IC, 14 x 20, scarce; J. B. grade, do., $5.30; Bessemer full weight, $5.30; light weights, $4.85 @ $4.90 for 100 lb, $4.80 for 95 lb, $4.62½ for 90 lb. Siemens Steel scarce. Stamping Plates—Bessemer Steel, Coke finish, IC basis, $5.60; Siemens Steel, IC basis, $5.65; IX basis, $6.75 @ $6.80. Charcoals—Melyn grade, IC, $6.35; Crosses, $7.87½; Allaway grade, IC, $5.60; Crosses, $6.75; Grange grade, IC, $5.75; Crosses, $6.85. Charcoal Ternes—Worcester, 14 x 20, scarce; do., 20 x 28, $11.35; M. F., 14 x 20, $7.35 @ $7 37½; do., 20 x 28, $14.75; Dean grade, 14 x 20, $5.35; do., 20 x 28, $10.50 @ $10.60; D. R. D. grade, 14 x 20, $5.15; do., 20 x 28, $10.10; Alyn, 14 x 20, $5.35; do., 20 x 28, $10.50; Wasters—S. T. P. grade, 14 x 20, $4.75; do., 20 x 28, $9; Abercarne grade, 14 x 20, $4.60; do., 20 x 28, $8.87½.

The monthly production of Copper in the United States since July, 1892, has been as follows, the first column giving the aggregate returns from the reporting mines, which include the principal Lake, Montana and Arizona producers; the second being the metal from pyrites and from a number of smaller outside sources, being estimated:

American Product.

1892.	Reporting mines. Gross tons.	Outside sources. Gross tons.	Total. Gross tons
July	9,294	924	10,218
August	10,807	870	11,677
September.	9,710	994	10,704
October	9,668	1,289	10,957

New York.

Office of *The Iron Age*, 96-102 Reade street, New York, December 20, 1893.

Pig Iron.—Transactions in Pig Iron are very light. The failure of the Crane Iron Company restricts the quantity of standard Lehigh Iron available for the markets, although it is understood that the furnaces may be started to work up raw material on hand. Some of the pledged stock of Iron may be sold peremptorily to satisfy advances. We quote: Northern brands, $14 @ $15 for No. 1; $13 @ $14.25 for No. 2; $12.25 @ $12.50 for Gray Forge, at tidewater. Southern Iron, same delivery, $13 @ $14 for No. 1; $12 @ $13 for No. 2; $11.50 @ $12.25 for No. 3; $11.75 @ $12.25 for No. 2 Soft, and $12.25 @ $12.50 for No. 1 Soft. Gray Forge is $11.25 @ $12.

Spiegeleisen and Ferromanganese.—Practically nothing is doing in foreign material of this class. We quote: Spiegeleisen, 10 % @ 12 %, $21.50 @ $22, and 20 %, $25 50 @ $26, on cars, Jersey City. Ferromanganese remains nominally $55 @ $55 50.

Billets and Rods.—The market is weaker, in sympathy with Pittsburgh advices. We quote nominally: Domestic Billets, $19.50 @ $22, and foreign Billets, $28 @ $28.50, tidewater; domestic Wire Rods, $27 @ $28, and foreign Rods, $39 @ $39.50, tidewater.

Steel Rails.—One small order for a few hundred tons for a coal road was taken for immediate delivery by the Pittsburgh Mill. The South Mill of the Lackawanna Company starts to day double turn for a considerable period. Local officers of the Colorado Company state that the Union Pacific order taken by them is for 26,000 tons and not 30,000 tons, as printed in press dispatches. The price for 1894 delivery remains $24 80 at tidewater.

Track Material.—We quote as follows for small lots: Spikes, 1.70¢ @ 1.90¢; Fish Plates, 1.25¢ @ 1.40¢; Track Bolts, Square Nuts, 2.10¢ @ 2.40¢, and Hexagon Nuts, 2.30¢ @ 2.50¢, delivered. Concessions would be made for round lots.

Manufactured Iron and Steel.—The material for the Scribner Building was taken this week by a Pittsburgh mill. A lot of about 250 tons of Angles for the Ocean Grove Auditorium was secured by another Western works. A number of stories printed in the daily press are untrue. Among them that of

Hosted by Google

an indefinite stoppage of the Passaic Rolling Mill, and that of a consolidation of interests by the Columbia Works, the Elmira Bridge Company and the Jackson Architectural Works. Very little is doing in Plates, and Bars are very dull. We quote nominally: Beams up to 15 inch, 1.65¢ @ 1.80¢, 20-inch, 1.80¢ @ 2¢, 24-inch, 2¢ @ 2.25¢, for round lots; Angles, 1.55¢ @ 1.75¢; Universal Mill Plates, 1.50¢ @ 1.75¢; Tees, 1.80¢ @ 2¢; Channels, 1.65¢ @ 2¢, on dock. Steel Plates are 1.45¢ @ 1.60¢ for Tank; 1.60¢ @ 1.90¢ for Shell; $1.90 @ 2.15¢ for Flange, and 2.25¢ @ 2.80¢ for Fire Box, on dock; Refined Bars are 1.45¢ @ 1.9¢, on dock, and Common 1.35¢ @ 1.50¢; Soft Steel Bars are 1.45¢ @ 1.70¢; Scrap Axles are quotable at 1.65¢ @ 2¢, delivered; Steel Axles, 1.65¢ @ 1.90¢, and Links and Pins, 1.65¢ @ 1.80¢; Steel Hoops, 1.70¢ @ 1.90¢, delivered; Cotton Ties, 70¢ @ 72½¢ ₩ 45-lb bundle, at mill; Machinery Steel, 1 45¢ @ 1.50¢; Toe Calk, 1.90¢ @ 2¢ and Sleigh Shoe, 1.65¢ @ 1.75¢, delivered.

Old Material.—The only transaction recorded is a sale of 200 tons of Old Iron Rails, special makes, at $12. The market is lifeless and weak.

The Lukens Iron & Steel Company of Coatesville, Pa., have appointed W. E. Clark as their New England representative, with offices at 8 Oliver street, Boston. Mr. Clark is well known to the Iron and Steel trade in Boston, having been for many years connected with William M. Horne & Co.

British Iron and Metal Markets.

[*Special Cable Dispatch to The Iron Age.*]

LONDON, WEDNESDAY, December 20, 1893.

Pig Tin prices are about 10/ lower and the market is very tame at the decline. Early in the week there were reports of the payment of prices in the East relatively higher than those that ruled here. Some merchants gave a premium of 15/ over spot prices. Other buyers failed to respond in the face of Straits shipments of 1900 tons during the first half of the month and expected heavier shipments during the last fortnight, together with disappointment in American demand, upon which there was much buying a short time ago. An additional weak feature turned up in the form of weaker advices from the East. At present the market is feverish, with Straits quoted at £75. 5/ for prompt, and £76. 5/ for three months futures.

Copper has undergone comparatively little change in price, and there is no change in the general situation. Dealers sold forward quite freely on the advance that took place early in the week, and there was also more or less realizing by outside holders. Those sales operated as an offset to the strength previously developed from large orders from India, and caused a reaction from previous highest figures to present rates, or a decline of 5/ from the highest point. Transactions in furnace material have been limited, as smelters are unwilling to pay the prices demanded. Spot stocks decreased 1110 tons during the first half of the month and the visible supply has fallen off 555 tons. Chili charters were 1500 tons. Owing to the fact that four largest producers of Refined Copper have withdrawn from the market, Tough Cake and Best Selected English will probably rule higher in the future than other kinds. At the close the market was quiet. Quotations were £43 for Merchant Bar prompts; £43. 10/ for three months' futures, and £40. 10/ for Best Selected English.

Tin Plate has been in somewhat more active demand, but except for moderate quantities of Bessemer Cokes few orders have been placed. Business is restricted in nearly all lines by the lowness of prices made by buyers. The sales made have been chiefly from stock on hand, and for early delivery. Business has been resumed at the Waterloo works. Liverpool quotations are as follows:

IC Charcoal, Alloway grade	12/3 @ 12/9
IC Bessemer Steel, Coke finish	11/3 @ 11/6
IC Siemens " " "	11/6 @ 11/9
IC Coke, B. V. grade, 14 x 20	11/3 @ 11/6
Charcoal Terne, Dean grade	10/9 @ 11/

Pig Lead has been in only moderate demand, but prices are steadier at £9. 10/ for soft Spanish.

Spelter is weaker in prices and finds slow sale. Present quotations about £16. 12/6 for ordinary Silesian.

There is no change in the Iron or Steel trade, except that prices for warrants have ruled lower, receding to 43/6 for Scotch, 35/7½ for Cleveland, and 45/6 for Hematite.

A. R. Whitney & Co. of New York are just completing a shipment to Hayti of the iron work for a dock, consisting of a number of steel cylinders, No. 10 gauge, stiffened with angles, to be filled with concrete and fitted with a heavy shoe on top. For the same party they are sending out an iron warehouse, a railroad bridge and two small foot bridges.

An export order just placed for Cuba was for 500 tons of cast iron pipe and 300 tons of wrought iron pipe. The former was taken at $17.50, at works, by the Bessemer, Ala., shop, being probably the first export order of this character taken by a Southern pipe foundry.

McMann & Taylor, 42 Cliff street, New York, dealers in steam fittings, plumbers' supplies, &c., have been made agents for this territory of the Eddy Valve Company. They will carry their goods in stock.

At the close of the year with such a record for dull trade as 1893 it is somewhat cheering to learn that there are a few concerns whose books show an increase in business. Among the number is the New York Iron Roofing & Corrugating Company, controlling two factories at Jersey City and Philadelphia respectively. They state that during this year their business has reached 3500 tons of black sheets, corrugated and painted and for other forms of roofing and siding, also 400 tons of galvanized roofing. This is a marked increase over 1892.

The annual returns of the Clyde shipbuilding industry show that the total output for 1893 was 208,000 tons, against 336,000 tons last year.

HARDWARE.

Condition of Trade.

THE year draws to a close with the falling off in business which is expected at this season. The approach of the holidays, the withdrawal of travelers from the road, the attention being given to plans for the new year's business, the effect of the financial disturbance and business depression of the past six months, the uncertainties of Tariff legislation, the weakness in the prices of some staple goods and the probability of lower prices in other lines—are influences which at this time are conspiring to make the trade defer all unnecessary purchases. The volume of business is therefore, to a good degree, limited to a few seasonable supplies and such goods as are needed for immediate sale. The improvement in the financial condition is a matter for congratulation, with the prospect of a better state of things in the near future than has characterized the last part of the present year.

Chicago.

(*By Telegraph.*)

The Shelf Hardware jobbers have enjoyed a comparatively fair trade the past week, but believe that business is now about over for this year. Salesmen are very generally on their way home to pass the holidays, and there will be few orders transmitted by mail direct from country buyers. Manufacturers' agents report a quiet condition of affairs in almost every line. A good demand has been experienced for Heavy Hardware. The trade in Iron and Steel is fair from small consumers, but there has been an unusually large movement in Sleigh stock, on which prices have risen owing to the scarcity of material. A stiff advance is asked on made-up Cutters.

St. Louis.

(*By Telegraph.*)

There is very little doing in the Hardware trade. The closing half of December is about as dull a period in the jobbing Hardware trade as they experience during the entire year, and this week appears to be even more so than usual. Salesmen are all in off the road, and arrangements are now in progress for the new year. So far as the jobbing Hardware trade is concerned the present year is practically gone and 1894 is now being discussed. The present year will go down in history as one of the most disastrous which the Hardware trade has experienced for 20 years past, and many will be glad when January 1 comes so as to blot 1893 out altogether. What little trade there is, is mostly holiday goods for local or nearby delivery. Collections are steadily improving.

Louisville.

W. B. BELKNAP & Co.—The fine, open, seasonable winter that we have had so far in this part of the country has conspired to make business fairly good. Prices, however, have not shown any special strength or any tendency to advance so far, but it would seem impossible that a continued demand, with the production being constantly limited by the closing down of various mills, could help but find some response after the first of the year.

The restoration of confidence is coming on slowly but surely. In New Albany, for instance, where the woolen mill and plate glass works had suspended, both of these concerns are now in operation, giving welcome employment to a large number of operatives. The rolling mills both there and at this place are running part of the time, enough to keep men together and customers supplied.

Some of the larger corporations here which passsd dividends in July have already declared them for January, thus putting their stock or their securities on a paying basis and making the holders feel much more comfortable, The purely Christmas business is less marked than usual. The more expensive lines of goods have not been laid in by the merchants as heretofore, a wise precaution, as consumers are hardly able to indulge in such luxuries.

The smaller or country towns appear to be doing well, as are the people in the country; all sorts of farm products are sold readily at good prices. The suffering, with which there is naturally and commendably much sympathy, is mainly confined to the towns, to which large numbers of people have flocked with the idea that they would be taken care of by charitable individuals and organizations. Free coal, free soup houses, wayfarers' rests and other such inducements are held out in name and in fact, and the great army of the unemployed is not suffering from deserters, but rather from incessant recruiting. Very much has been made of the situation in the public prints. Many of those who never have anything to do because of their lack of skill or industry have come to look upon themselves as the wards if not of the nation, of the municipality which suits them best. Fortunately we have here an unusually well ordered board of organized charities, and much of the care of the real unfortunates as well as the detection of the impostors is laid upon it. The sensation of the day is the collapse of a span of the new Jeffersonville bridge, which occurred this morning, carrying down into the river over 40 men, half of whom were drowned.

Cleveland.

THE W. BINGHAM COMPANY.—The usual falling off in trade incident to this season of the year is perhaps a little more marked now than usual. The uncertainty of Tariff legislation, the unprecedented weakness in the price of staples and the general conservatism of all buyers are the prime factors in the present reduced sales. The country was never so bare of goods, and when the turn comes there will be such a demand for all kinds of goods as was never before known—but when will the turn come? That is the question. Orders for Wire and Wire Nails are being freely placed at the present low prices, and it seems almost impossible for these staples to go lower than they are at present. Season goods are selling unusually well. The stringency of the money market has disappeared and collections are fair.

In closing this year we wish all our friends throughout the trade a Merry Christmas and a Happy and Prosperous New Year.

St. Paul.

FARWELL, OZMUN, KIRK & Co.—The middle of December finds our trade well up to expectations based on October and November business. The demand continues fairly steady and will continue so as long as we have our salesmen on the road. We look for a fair mail order trade during the first part of the coming month, perhaps proportionately better than usual, as dealers are by no means stocked sufficiently to run them through the mid-winter months.

We hope that tariff discussion in Congress will not be prolonged, as we fear an uncertainty more than we do the final passage of a new revenue measure. The concerted action to secure the retention of specific duties on Tin and Terne Plates as opposed to ad valorem duties has our hearty approval.

Omaha.

LEE-CLARKE-ANDREESEN HARDWARE COMPANY.—The experiences of the past two weeks have not been without their bright side as regards the jobbing Hardware trade of this section. The increased volume of business that was expected as the holidays approached has not been disappointing. The month opened auspiciously, and the colder weather, together with some snow, has given a stimulus to business which ought to show a gratifying effect at the close.

As the year draws toward a close the usual figuring and speculating on the general results of the annual "round-up" are indulged in. During the first six months there was considerable activity, and the amount of business done was much larger than for the corresponding six months of the previous year. During the last six months of the year there has been a considerable falling off in the volume of business, and the question is whether the decrease has been sufficient to wipe

Hosted by Google

out the gains made the first half of the year. We are inclined to the opinion that the total sales for the year will fall slightly below those of 1892.

It must be remembered, however, that 1892 was a "banner" year, and it could not be expected that the total volume of business this year would reach the figures of 1892, especially in view of the shortage of crops of all kinds and other disastrous experiences. Still, with all the drawbacks, this year will exceed 1891, both in regard to the volume of business as well as profits.

Portland, Ore.

CORBETT, FAILING & ROBERTSON.—Trade jogs along at the same even gait that we have at last accustomed ourselves to expect. The building season, which—as regards weather—we do not expect to stop, is at a standstill. This, of course, is owing to the depression prevailing in all lines. There is little inducement to build either business blocks or dwellings.

The holiday trade is not expected to amount to much this season. The trade requirement is for staple goods only, and at the prevailing low prices even, they do not tend to swell the volume of sales.

Collections do not show any improvement, and it is hard to say from what source they can be made.

Prices show no change, except Sisal Rope, the local Cordage works having reduced the card price to 7¢, a price never made before.

New Orleans.

A. BALDWIN & CO.—Business has quieted down considerably in the past week, and merchants are evidently waiting for the new year to see what will develop in the business situation. Even retailers are complaining of the small amount of business. Holiday goods are evidently not moving in such quantities as to make the retail merchants happy.

We usually look for a considerable dropping off of country orders in the jobbing department, as most of the merchants in the country are busy waiting on their holiday trade.

Baltimore.

CARLIN & FULTON. — During the present month the demand has been fairly good for goods appropriate to the season and orders have at least been numerous if not heavy.

The drop of the temperature to freezing point, with a fall of the beautiful snow, has helped the sale of Sleigh Bells and Skates, while the appetizing visions of sausage and mince pies have made an active demand for Meat Cutters and Stuffers.

The traveling salesmen generally return to their homes for the enjoyment of Christmas with their families, and we therefore expect few orders until the new year. Most of our customers overhaul their stocks, take their inventories, balance their books and are not disposed to purchase except for urgent wants.

After the holidays shall have passed we look for an improvement in trade, and in the South, though the present price of cotton is far from being satisfactory, yet a new crop must be planted and the demand for such necessary supplies begins almost with the first of next month.

This is the season of the year when most of the failures occur and when we hear oftener than at any other time from the debtor so unfortunate as to be compelled to assign and to prefer among his creditors some few of his relatives, but who has also found a kind friend willing to loan him enough to offer 25 cents on the dollar.

So far this year such cases are rare, notwithstanding the general depression that has existed, and we believe collections upon the whole have been as satisfactory as they have ever been, even in far better times.

Boston.

BIGELOW & DOWSE.—A stranger visiting the different Hardware jobbers would be inclined to remark that the trade was not feeling the hard times, as everything would indicate to him a rushing business. The bulky goods sold at this season fill the packing rooms, and the various packers seem to emulate each other in making an unusual noise with their hammers, &c. Notwithstanding all their bustle, the volume of business is still below that of last year. Lower prices will account for a proportion of the falling off, but customers' orders are small, and there is the same labor required to pack them and prepare them for shipment as if they were twice the size in quantity and in value. In times like these retailers find it to their advantage to send their orders to wholesale dealers, who supply their wants quickly and at such prices that they would be losers if they waited to send orders to factories, where they must make their orders larger and run the chances of a decline before the goods are sold. There is evidently a place for the jobber in times like the present, and they will try to merit the customers' confidence so as to retain their trade when the market changes and it is safe to buy for future advances. Prices are ruling very low, and there are many orders being placed for seasonable goods for spring delivery.

Philadelphia.

SUPPLEE HARDWARE COMPANY — Looking at trade from the present reduced standard or standpoint, it has continued moderately active during the last two weeks, but the trade during the two weeks preceding the Christmas holidays has for some years past been weeks of exceeding activity. Therefore a comparison of trade between this year and the same weeks of 1891 and 1892 shows it has been far below the average. This we find has been general throughout the entire country, if we accept the estimate given one year ago that the bank clearings over the entire country during the month of December were many millions in excess of the previous month, and while the bank clearings for November, 1893, was 25 per cent. less than November, 1892, December is likely to fall far short of the percentage of November, 1892.

Our country trade from agricultural districts has been far more active during the last few weeks than the city trade, both in the demand for general Hardware and season and holiday goods. From a comparison of the retail trade of our city, not confined to Hardware alone, but the general trade, one would scarcely realize he was living in the same month of the year. The holiday trade has suffered in the retail department severely in comparison with former years, and they report that where a person spent a $5 bill a year ago, he is now dividing it into from four to five portions and confining his purchases to more useful and needed articles in making his selection.

It is possible, however, that the economy practiced for the holiday season shown in our city may not be shown throughout the country, although it is probable that it is the case in all locations where they depend largely upon manufacturing industries, as the railroad earnings are somewhat of a barometer, and they report reduced earnings of about 12 per cent., and President Roberts of the Pennsylvania Railroad Company has instructed all heads of departments to enforce most rigid economy and to curtail all expenditures to the lowest possible point, and to reduce the number of employees to a minimum consistent with the safe administration of the service.

Collections are not so favorable as they have been in some of the preceding weeks.

The jobbing houses, as a rule, are arranging their force for taking the yearly inventory, and the greater part of what might be unoccupied time will be taken up with this business within the next few weeks, and the results of the year 1893 will therefore be known possibly soon after January 20.

The hard winter before the wage earner in the manufacturing districts is to be deplored. The writer has, within a few days, visited the neighborhood of our manufacturing districts, located in the upper portion of our city, where the effects of our recent panic are still visibly shown, and where a dead feeling still prevails. No animation of life is seen from the various factory windows, but closed and locked doors, with smokeless chimneys, greet one on every side.

While monetary conditions are favorable for resumption of work the demand for the goods produced in these factories is missing. Where an occasional mill has started up it is an exception, because others employing a larger number of hands have recently closed. Men, women and children stand idly about, and neighboring stores have reduced their force and reduced the wages of those who remain with them. Where thousands of turkeys and chickens hung from the grocers' doors and windows one year ago in this neighborhood the evidence now is that thousands of persons in this location will depend for their Christmas dinner upon charities' funds, and in this our Relief Association has been very active. The change from last year to this in that location is as if jumping from fairy land to a stern reality.

With this state of affairs in manufacturing districts, it is no wonder that the financial circles were amazed, and is it not wonderful that such a mischievous bill as that introduced by Senator Voorhees in the United States Senate within the last few days should have been brought forward? The bill provides that the Secretary of the Treasury shall purchase silver bullion in sufficient quantities to coin not less than $2,000,000 per month, and shows upon the face how little consideration is given by some of our representatives in Washington to either demands of public interest or the distress of those who have recently suffered from unwise legislation. How any one should be so reckless of the interests of the country it is difficult to understand. The idle mills, the millions of unemployed, the financial, mercantile and industrial failures are all brushed aside with sweeping indifference. It is now plainly seen—which was earlier supposed—that the leader of the Senate had no heart in repeal of the so-called Sherman clause further than public opinion and President Cleveland's whip. It is asserted, however, that the intention is not serious further than to secure the votes of the silver Senators for other purposes;

Hosted by Google

but why play the game of battledore and shuttlecock when so great a danger is manifest?

The Secretary of the Treasury, Mr. Carlisle, recently stated that the silver question was now settled for many years to come. This had a pacifying effect to quiet the unrest, and while these words still sound in one's ears Congress is asked to enact a law compelling the compulsory coinage and force its acceptance by the retirement of bank notes of denominations less than $10. This financial heresy of compelling 70,000,000 people to throw aside the convenience of these notes is bad enough, but in itself small in comparison to the danger of a renewed panic, as this law would be just as much worse than the Sherman law as the Sherman law was a better law than the Bland silver law, which existed prior to the enactment of the Sherman law. The Bland law was given a fair trial and it was found not possible to force this silver on the country and public opinion demanded its repeal. That not being possible the Sherman law was enacted. It is not at all probable that President Cleveland would sign such a law if enacted, nor would it be possible to pass it over his veto.

The worst feature, however, is the indifference to the recent object lesson of the severest panic this country has ever experienced, and at a time when we are slowly but painfully recovering from the effects, to strike a blow again at public confidence is certainly an unexplained mystery.

Notes on Prices.

Wire Nails.—The market still continues to show a declining tendency and carload lots of Wire Nails at mill are much more readily obtainable at $1.10 than they were a week or two ago, and it is understood that sales have been made at $1.05. The regular demand for early delivery is very moderate, but the low prices which are ruling have had the effect of inducing the placing of some fair orders. The trade are, however, to a large extent deferring purchases until after the first of the year, but at the same time buyers are watching the market carefully, so as to be ready to place their orders when there are indications of a strengthening in price.

Chicago, by Telegraph.—Matters are quiet in Wire Nails. There is more or less inquiry for spring delivery, but few Nails are wanted for December or early January. Factory lots are quoted at $1.25 to $1.30, Chicago, and small lots from stock are selling at $1.35 to $1.40.

Cut Nails.—With the unsatisfactory condition of the market the mills are to a considerable extent reducing their production and avoiding as far as possible undue accumulation of stocks. The price in the East is represented by the quotation of 90 cents for carload lots, f.o.b. mill, and is regarded by many as being as low a figure as is obtainable on regular specifications. There is, however, reason for believing that this price has been slightly shaded. Small lots from store in New York are quoted at $1.20 to $1.25.

Chicago, by Telegraph.—Business in Cut Steel Nails is very quiet and will probably continue so until after the turn of the year. The reported fire at Lake Side did no damage to the works proper, but only affected the keg factory, which is operated by outside parties. The works are in active operation and will not shut down for the holidays. Prices are unchanged at $1.15 to $1.20, according to the character of the order, while small lots from stock are selling at $1.25.

Barb Wire.—Barb Wire as well as other leading staples feels the effect of low prices made by manufacturers who are especially desirous of realizing on their product, and as a result still lower prices have been developed. It is understood that some sales have been made by Western makers in large lots at $2 for Four-Point Galvanized at mill. The market is fairly represented by the quotations of leading manufacturers of $2.10 for Galvanized and $1.70 for Painted, with 5 cents off in carload lots. One or two of the manufacturers, however, refuse to meet current prices, and for the time being have practically withdrawn from the market. The legitimate demand is light, but some business is induced by the extremely low prices which are offering. Small lots from store in New York are quoted at $2.35 to $2 40 for Galvanized.

Chicago, by Telegraph. — Manufacturers who deal largely with the retail trade report as much Barb Wire sold now as last year up to the same date. The tonnage being made up of small orders, a better price is realized than if the orders were as large as are usually placed by jobbers. Manufacturers who cultivate relations with jobbers report a very quiet trade. Prices continue to be quoted at $2.35 to $2.40, Chicago, for Galvanized Barb Wire in factory lots; $2 50 to $2.55 in small lots.

Plain Wire.—The market for Plain Wire is weak and irregular, and somewhat lower prices have been developed within the past two weeks. The condition of the market is reflected in the following quotations of a well known concern, which are subject to an abatement of 5 cents on carload lots:

	Annealed.	Galvanized.
Nos. 6 to 9	$1.35	$1.75
" 10 and 11	1.45	1.85
" 12 and 12½	1.55	1.95
" 13 and 14	1.70	2.10

Some of the manufacturers, however, refuse to meet these prices and are naming slightly higher figures.

Lanterns. — Buhl Stamping Company, Detroit, Mich., one of whose Lanterns is illustrated in this issue, quote these goods at the following net prices:

Mascot assortment, three square lift Lanterns, assorted colors, two dash Lanterns and one head light, per case	$5.00
Brilliant assortment, 12 square lift Lanterns, assorted colors, per case.	6.00
Dash Board Reflector Lanterns, japanned blue, per dozen	5.50
1894 Tubular head light, per dozen..	21.00

Venetian Ironwork Outfits — The materials for Venetian Ironwork described in our last issue as put on the market by A. J. Weed & Co., 106-108 Liberty street, New York, are subject to a trade discount of 20 per cent. A manual relating to this work gives complete list prices on the goods.

Hammock Hooks.—Stearns' Hammock Hooks, manufactured by E. C. Stearns & Co., Syracuse, N. Y., No. 200 of which was illustrated in *The Iron Age* December 7, 1893, are sold at net prices as follows:

No.		Per doz.
200.	Steel Plate Hammock Hook	$0.60
20.	Hammock Hook	.60
24.	Hammock Hook	.60

Hair Curlers. — The Unique Self Heating Hair Curler, as illustrated in *The Iron Age* December 14, 1893, is manufactured by the Unique Novelty Company, Detroit, Mich., and sold on 30 days time, or 3 per cent. discount for cash in ten days from the following net prices:

	Per dozen.
Nickel	$16
Silver	24
Gold	36

Steel Broiler.—The Steel Broiler illustrated in our issue of December 7, 1893, and manufactured by the Cleveland Stamping & Tool Company, Cleveland, Ohio, is sold at $1 each, from which a discount of 70 and 10 per cent. is allowed.

Adjustable Paint Burner. — The Quick Meal Adjustable Paint Burner, manufactured by Quick Meal Stove Company, St. Louis, Mo., and illustrated in our issue December 7, 1893, is sold at $5 each, less a discount of 30 per cent.

Glass.—The week has developed few or no changes in the condition of the Glass market, although some additional factories in the West were put in operation. It is reported that some of the factories making Glass have orders which will keep them employed for some time. Local trade is limited to small orders, which is not unusual at this season of the year. Prices are reported from Pittsburgh as being 85 and 5 and 5 per cent. discount for single and 85 and 10 and 5 per cent. discount for double strength Glass. Western prices from factory are given as 85 and 7½ per cent. discount for single and from 85 and 10 and 10 to 85 and 15 per cent. discount for double strength Glass. It is understood that Western prices are in some cases made at the foregoing figures, delivered at destination. The continuous tank system used in modernly arranged Glass plants allows the production of Glass at a less cost than where pots are used. This and other improvements will aid in solving the question of making Glass profitably at a low selling price. There is a lack of uniformity in quotations made by various Plate Glass factories. It is reported that the price at which Plate Glass is being sold allows of its use as a substitute for Window Glass of the larger sizes.

ANCIENT HARDWARE

BY A. W. PARMELEE.

A paper read before the Massachusetts Hardware Dealers' Association, December 13, 1893.

Mr. President and Gentlemen of the Hardware Association:

Your committee, in asking me to speak to you this evening, intimate that I am a patriarch, and that I have seen American Hardware develop from its very beginning. When we reflect that less than 50 years ago nearly all our Hardware was imported from other countries, and that many at this table have in their lifetime seen American Hardware manufactures grow from nothing to their present magnificent proportions, I do almost feel like one of the old Hardware pioneers of America.

PREHISTORIC AMERICA.

But, Mr. Chairman, I can show that I am not one of the very first. A grave has been unearthed on this continent, covered by strata of soil and geological formation which science tells us must have taken 10,000 years to form. Its hewn stone casing and inscriptions give unquestioned evidence of the chisel and the hammer. The ornaments and the kitchen Hardware, inclosed with the body, are cunningly wrought and well devised. History and poetry look for stories of great battles and noble deeds in these graves; art looks for statues and ornamental devices; neither art nor poetry will aid me in looking up the details of the Hardware business at that time, and hence I must do it for myself. This grave and the thousand other evidences of prehistoric nations point to a people who knew as much in their way as we do in ours. Evidences accumulate that nations have flourished and disappeared upon this continent so far back in time that the mind cannot conceive it. We have mummies that are older than any in Egypt. These, in turn, are antedated by other peoples long since lost in antiquity. Ages before the flood they were growing corn in Ohio and mining copper, silver and gold in various localities; they were weaving cloth, making dyes of all colors from herbs, berries and minerals. The facts revealed point to a people who filled teeth with gold and who operated for cataract in the eye—one of the most delicate attempts known to our modern surgery. If these remote people could do these things shall we suppose that they did not have the finest of tools, and that they did not know all about fashioning, tempering and polishing them? From whom should they obtain these and similar tools except from the Hardware merchant? Shall we doubt that there was the Hardware store, and that it had its sign and its imposing show window? There was unquestionably the Hardware merchant; and he was distinctively a Hardware merchant. The same man who sold implements of war and of husbandry manifestly did not also keep doves; nor did he deal in rare needlework or art images. There was the Hardware merchant and, perforce, the Hardware manufacturer. We are obliged to admit also that there was the ubiquitous Hardware drummer.

The American nations built public works as great or greater than any known in Europe. The Peruvians had public roads 2000 miles long. Humboldt pronounced them among the most stupendous works ever produced by man. They built magnificent bridges of stone, and even invented suspension bridges thousands of years before they were introduced to Europe. In Central America and Mexico the wonderful ruins tell of a dense population. One city covers a space 6 miles in diameter. Its long avenues are lined with ruins of public building, palaces, factories, edifices and halls, in continuous lines, like our modern cities. These evidences of former grandeur cover an immense territory, including many of our Southern and Western States. One fort on the Little Miami River, Ohio, has a circuit of 4 or 5 miles, and an embankment 20 feet high. It could garrison 60,000 men with their families and provisions.

They had a chain of fortifications reaching from the State of New York across Ohio to the Wabash, and many other works of equal magnitude; yet nowhere in history can I find an ancient spade, or shovel, or wheelbarrow.

MOUND BUILDERS.

In the valleys of the Mississippi and tributaries and throughout Ohio and many other portions of this country are evidences of prehistoric man which baffle our present knowledge. Whatever the purpose of these mounds was, the fact that there are over 10,000 of them in Ohio gives some idea of the extent of the ancient people who built them. They are far more numerous in Southern localities and in the Gulf of Mexico. To have such works possible, under any circumstances, there must have been settled life with its accumulations and its organized industries. They had their manufacturers and merchants; and they used implements of agriculture, of war and of peace. No trace of their dwellings, or their factories, or their stores is left. Their circular earthwork inclosures are perfect circles, and their square inclosures are perfect squares. They are constructed with geometrical precision, which implies a knowledge of science. Implements made of copper, silver, obsidion and greenstone, finely wrought, are found in abundance. Their axes, single and double, adzes, chisels, drills or gravers, lance heads, knives, bracelets, pendants and the like, of copper; their ornaments made of silver and mica from the Alleghenies, and shells from the Gulf of Mexico, all testify to their organized industries. They had the art of spinning and weaving.

In a Minnesota mine a mass of copper weighing nearly 6 tons has been found, which was evidently detached by prehistoric man. It lay upon a cob work of round logs or skids, the ends of which showed plainly the marks of a small axe or cutting tool, and the mass of copper had been raised several feet along the foot of the lode on timbers by means of wedges. Copper mauls, or sledges, weighing 25 pounds were also found. The whole copper region of Lake Superior shows the work of ancient miners at all the mines of any importance. Their settlements extended into Virginia, Michigan, Wisconsin, Iowa, Illinois, Indiana and Missouri. They were not ancestors of the wild Indian.

Some of the wrought ornaments of the mound builders equal in finish and beauty the finest manufactured by the ancient Peruvians. They made chain, and they had a great store of copper, flax and other rich commodities. They were in some way related to the ancients of Yucatan, Guatemala and Southern Mexico. The fact that they extended through Texas to South America indicates an exceedingly large and very populous condition in the remote past. In Central America, mostly buried in heavy forests, are wonderful ruins of great cities and temples. In Colorado and California are ruins of more permanent structures of stone, which, in their day, might have excelled the famous Pueblos of New Mexico. There was a higher degree of civilization in the ancient times than has been shown by the people of the same race there in our time. Ruins throughout North and South America display intelligence, skill and much labor. Aqueducts and subterranean reservoirs and cavernous passages show the extent of their knowledge and engineering skill.

MEXICO.

The history of the conquest of Mexico reads like a fairy tale. Our present object, however, is to reflect that these great peoples had their merchants, their manufacturers; and that they engaged in the Hardware business as we do to-day; and that if we can discover the nature and extent of their Hardware, we can, in a large measure, find out their condition and habits and their stage of civilization. The ancient graves disclose almost every article of Hardware known to us at the present day; bodkins, screws, horseshoes, shawl pins, buckles, knives, helmets, shields, tweezers, door keys, sheep shears, &c.

While it appears that in very ancient times the natives of Central America possessed copper implements for tilling the fields and knew the use of the chisel, researches show that the use of the axe and hatchet in various forms, the blow pipe, the cooper adze and the meat chopping knife are far back in time. They made nails, and they are believed to have brought the manufacture of bronze to great perfection, and are even said to have possessed the art of tempering brass.

PRIMITIVE HARDWARE.

We are on the threshold of investigations in this country which shall reveal the evidence of man on this continent so far back in the ages that our previous estimates of the development of man shall be dwarfed into insignificance. However savage his state may be assumed to have been, primitive man must have possessed implements, weapons, domestic utensils, Hardware—implements more or less rough, but still implements for cleaving wood, constructing places of shelter, carving his food, catching and preparing his fish, trapping his game and other similar uses. Man has never existed without a defensive weapon. We patiently search for these tools and implements, and our search has been and will be rewarded.

Those of us who have seen iron pipes buried in the earth return to oxides and to sand in a few years' time and those of us who wonder what becomes of all our pins can understand that through the ages that have lapsed all traces of ordinary implements of Hardware may well have disappeared again and again. Nevertheless, bones and implements have been found in certain strata of the earth, the age of which is known to geologists. Some of these long preceded the flood. The more enduring stone is naturally found where perishable Hardware of other varieties has disappeared.

BONE IMPLEMENTS.

It is evident that if we have met with the bones of the cave bear and of man in conjunction with relics of his industry, such as implements and utensils, we can assert with some degree of certainty that Hardware was known at the time of the cave bear, and that man lived in the quarternary epoch.

It is interesting to note that in diluvial beds the Hatchet and the Axe have been found—stone, to be sure, but in such perfection as to be the shape of the same article reproduced down through all the ages, until to-day we sell the same Hatchet and the same Axe, in pattern.

In a prehistoric cave in France there has been found the remains of the bear and of man, together with numerous well made implements of stag or reindeer's horn, carefully fashioned and beveled, with holes drilled therein; knives and other weapons, and the bear's tooth carved in the shape of a bird's head and drilled. This cave had a cement floor or layer of made ground of an ossiferous and vegetable character, strengthened with fragments of stone. There were also ashes and charcoal, showing the existence of a fire.

The jaw bone of the great bear, with an immense canine tooth left in place, and the whole carved, finished and fashioned into the shape of a convenient and formidable weapon, further testifies to the skill and workmanship of the people in that remote age.

During the Glacial Period man's greatest need was fire. This he doubtless obtained by rapidly revolving a pointed stick against inflammable woods, resin or grease of wild animals by means of the bow drill.

EARLY HARDWARE MANUFACTURE.

The use of the bow appears to have been known from the beginning of time, and the bow drill of our present day appears through all the history of antiquity. The flint arrow head and the long bow are also common to mankind in all ages and in all lands. Stone implements of various kinds, and in some cases for uses which we can hardly conjecture, also appear to have accompanied man almost from his earliest stages. The varying types of these stone implements mark the date of the starting point of manufactures and the arts. We find among them flint knives, scrapers, agricultural implements and domestic utensils. We have found in this country immense beds of flint flakes, showing that these implements were made at regular factories, and the chips and imperfect implements found in these beds indicate that they were made upon a very large scale, and that there was the manufacturer and hence the merchant and, of course, the drummer. We find also the mines from which the suitable flint was extracted, and that the mines were shored up and protected with posts and lumber, to stay the earth in place, much as we do mining to-day. It is also manifest that there were varieties and different qualities of these various implements, some of them being made from the common flint, while others are made from obsidion, quartz, jasper, agate and jade.

The manufacture of tomahawks, scrapers and chisels and the skill required in fitting them to handles gave employment to large numbers of men, These men were skilled mechanics, and had all the questions of wages, hours of labor, &c., which we have to-day. Perhaps they had their labor unions. These are the primitive Hardware manufacturers.

The potter's art we are not discussing, but it also dates back to the earliest epoch of man. How soon the potter's wheel or lathe was known we cannot yet determine.

Implements made of reindeer horn, sharks' teeth, teeth of the cave bear and of polished bone are also found; while the needle, having an eye pierced at the base, was manifestly known to the cave dwellers and to earliest man. Bodkins, stilettos, saws and needles are found. The perfect flint drill, with sharpened point and cutting edge, also appears in the Stone Age. The spoon made from the reindeer's horn, and delicate instruments made from polished horn and bone; the flint saw and the chisel, the bone harpoon and the horn comb were in use by the cave dwellers.

SIMILARITY IN FORM.

These people on this continent, far back in time, have a remarkable similarity to man in other parts of the world. They passed through the same periods with much the same experience in knowledge and development as in the better known countries of Europe. Their Stone Age, their Bronze Age and their Iron Age are distinctly marked. They had on this continent the same stories of the flood; the same rules of art and of architecture; the same pyramids; the same common form of arch; the same belief in immortality: the same compass; the same knowledge of astronomy; a similarity in languages and in alphabets. The plow is found in ancient Egypt and in ancient Peru; the axe of the Stone Age in Europe is the axe of the Stone Age in this country. The stone arrow head of Switzerland is the same as the stone arrow head of America.

The bronze chisel and the spear head of oldest Europe are almost identical with those of North America. Both countries knew the use of the magnet; the signs of the zodiac; and they calculated eclipses and watched the periods of the planets and constellations. The carpenters' and masons' tools of oldest Europe are almost identical with those we use to-day. Even the obelisks of Egypt have their counterpart in America. The division of time employed at Thebes was strikingly similar to that found in use in Mexico. The round towers of ancient Ireland and Scotland are the same as those in New Mexico and Colorado. Ancient Phœnician idols of the horned god Baal are the same as those found in Dakota and Peru. Coins of ancient Tyre and of Central America are strikingly similar in size and in the device thereon.

COINCIDENCES.

We find in this country mounds shaped like the elephant, yet it is known that the elephant never existed here. In ancient Mexico also idols and bas-reliefs faithfully portraying the elephant have been found.

These coincidences are mentioned to show that at various times, through vast antiquity, the old world and the new have in some way come together and have interchanged knowledge, arts, forms of government, implements of war and of agriculture.

Now, who were the venturesome and ambitious men who undertook these voyages, and what was their incentive? I answer that it was the traders, and that they sold implements of war, of husbandry, of the chase, and of the domestic life; in other words, they sold Hardware and were the drummers. They pushed out into all quarters of the earth. Hardware and civilization have gone together since the Glacial Period.

The Hardware implements found in these ancient graves record the progress of man and fix his stage in the advancement of the race. Since time began commerce has been the great educator, explorer and mover of the world, and in the forefront of these exploits is the Hardware merchant.

Hosted by Google

VULCAN.

Vulcan unquestionably had an existence in fact, and it is only the halo of time and imagination that deifies him. He was a smith, armorer and chariot builder. He made Horseshoes of brass, and was an unusually good Hardware manufacturer. (Any of us who are unusually good in our line will doubtless go down to posterity in much the same exalted memory.) He is said to have forged thunderbolts, but we Hardwaremen know that he would not make up any stock for which there was not a demand. If he "forged" at all, it suggests the anvil and heated iron; but all his products were brass and plainly locate him in the Bronze Age. His goods had a large sale on account of their quality.

Whoever was the original of the Venus of Mythology, it is plain that she needed kitchen Hardware, manicure sets, and I had almost said a pocket knife, but I am in some doubt as to whether she wore a pocket.

COLUMBUS.

Recent events at Chicago have exalted the name of Columbus, but we of the trade know that Columbus was, in fact, a hardware drummer. He carried a line of pocket knives, hatchets, fish-hooks and small wares, and was seeking to extend his trade. At a dinner given by the Hardware Association, in Spain, after one of his trips, he won a wager on some quite ordinary trick with an egg. He told those people at home that he had "discovered" us. Discovered us! Forsooth! Our people worked off some coon skins and other articles with which the market was much overstocked, and induced him to give us several hawk bells for a single skin. These hawk bells were worth more to our women than all the surplus skins in the market; for they enabled them to adorn themselves with European novelties and to walk the streets of our cities in all the pride and glory of decorated beauty. Moreover Columbus died poor, as is still the custom of hardware commercial men. Many drummers from other lands had visited us before, far back in time, and many shall do it again.

We cannot help thinking of people in far countries, or in far off ages, as benighted and unused to the advantages we enjoy.

When we read of the beauty and wealth of Helen of Troy we are prone to believe that she was, nevertheless, a barbarian, and, in the absence of our modern silver plated fork, she tore her food asunder (perhaps by putting one foot on it), and in general lived and conducted herself in a very crude manner. We must rest assured, however, that her household utensils covered not only all the devices for utility and convenience known to us, but were, moreover, probably adorned and embellished with workmanship such as we rarely see.

ASSORTED SIZES.

When we read of the magnificent bronze shields and the shining helmets of Ulysses' army we are carried away with the sublimity and poetry of the situation, but our subject for this evening is Hardware. Would it be unpoetical for me to wonder who sold Ulysses those shining helmets, and whether they originally came one dozen in a box, nested and assorted sizes, and whether the drummers who failed to get the order were blamed by their houses? May we believe that Ulysses claimed that some of the boxes were one-sixth of a dozen short or that he took off 2 per cent. when he did not pay within ten days? The license of our trade gives us the right to inquire, but poetry is silent on these points and may even take offense at our temerity.

The dawn of the bronze epoch revolutionized the Hardware trade, and hence the civilized world. The copper mines of Lake Superior and of Minnesota have manifestly been worked in prehistoric ages. Evidences of brass foundries have been found in various places upon this continent. It is already made plain that the inhabitants of North America for a long time worked the pure copper into Hardware implements. How long they did this before they discovered that an alloy of copper and tin would make bronze we do not know, but it was thousands of years. Every day, however, brings new developments, and in time the history of the Hardware trade on this continent will be unfolded.

BRONZE AGE.

The transition from the Stone Age to the Bronze Age can be read in the disclosures of the lake dwellers of Switzerland. This wonderful people lived through the Stone Age and for long ages continued on until they lapped over into the Bronze Age. Some of their settlements disclose only stone implements, while others of a later date show the bronze chisel, the bronze winged hatchet, the bronze knife, the hexagonal hammer, the tanged knife of ornamental design, the socket knife and the bronze sickel; they show also the bronze fish hook, barbed, and in exact similitude of our present device. The ornamental hat pin, as now used, together with other articles of utility and ornamentation, are plentiful. The stone mold for casting the copper or bronze hatchet is of exceedingly ancient date, but probably the use of sand was far more common, and hence we have less traces of that method.

EGYPT.

It is a singular fact that the ancient Egyptians show no evidence of previous barbarism and gradual development, but they spring upon the world at once in a high state of cultivation. It is also remarkable that in all ancient Europe they show no evidence of having used copper before they discovered the advantage of an alloy with tin. They appear to have begun abruptly to use bronze. Is it possible that developments on this continent shall prove that the art was introduced to them by the inhabitants of this land?

TALES OF THE TOMBS.

While we grope in the dark, seeking to find the modes of living, method of work, details of trade and other interesting facts with reference to most of the ancient peoples, we are certainly indebted to ancient Egypt for its picture writing. We must be exceedingly thankful for the inspiration which caused them to decorate their tombs and all available places with those famous flat pictures of angular men and women engaged in the ordinary pursuits of life. They unfold to us a better story of their every day life than could be obtained in any other way. A painting from the tomb of Rameses III, at Thebes, shows an Egyptian kitchen, with the various processes of preparing the feast. It plainly shows our present butcher knife, the poker, pots and kettles, wash basin, various pans and bowls, soup ladles, ropes passing through rings, kitchen tables and the syphon of various sizes. The fire and bake oven quite nearly approach our modern stove, and the tray upon which the servant handed viands to the guest was the same device we use to-day. Bronze spoons and ornamental ladles of various lengths, as well as those of shell and alabaster, are found at Thebes. Small strainers or colanders also abound, and doors appear with the ordinary butt hinges and with ornamental strap hinges of our exact patterns.

BOLTS, WIRE, TOOLS, ETC.

We also find the shutter bolt like that we use to-day. Their well known skill in glass blowing leaves no doubt of their knowledge of the blow pipe and the crucible. Ancient sculptures represent the lantern, and Herodotus mentions a *fête* of lanterns which took place at a certain season of the year. They made cotton and linen cloth, which, together with mummy cloth, they manufactured on a large scale. This necessitated needles of all descriptions for the marvelous needle work they produced.

They made gold and silver wire far back in antiquity, doubtless drawing it through holes in metal plates, as we do. Wire drawing was first attempted with the more ductile metals like gold and silver, and at a much later period followed brass and iron wire. They had the flax hackle or comb, the knitting needle, spindles for weaving and the smoothing "iron" for cloth. Paintings at Thebes show the carpenter at work with the square, the bow drill and the marking awl. Others show the hand saw, the cooper's adze and the breast drill just as we use them now. Another painting shows the currier at work, between 3000 and 4000 years ago, and the circular knife he uses is precisely similar to that of our modern currier. The tools known to be in common use by the Egyptian carpenters were the axe, chisel, various kinds of hatchets, mallet, hand saw, two sorts of planes, plummet, square, rule, the hone and the leather bag containing nails. The cutting tools were

Hosted by Google

all of bronze, the blades being fastened to the handles by thongs of hide.

The bow drill is of the earliest date, and appears to have been always known on this continent as well as in Europe. The Egyptian carpenter had his tool chest, made of inlaid or veneered wood of various hues; and one painting represents an assistant spreading glue with a brush, and having his glue pot over the fire. It is noticeable that the chest handles on the carpenter's chest are of the same pattern as we use for that purpose to-day.

EGYPTIAN HARDWARE MERCHANT.

The Egyptian mummies, and these various paintings, and the mention of various writers, reveal to us to-day that these people had, in common use, the door knocker, pitchfork, flail, sickle, grass hook, plow, hoe, cattle yoke, hooped barrels and firkins, harrow, razor, hand mirrors, the comb, bellows, wooden mallets, levers, lifting cranes, door hasps, the butchers' steel, the balance scale with weights, the pole axe, forceps, try square, the wedge, and nails and tacks in variety. All these things point to the Hardware merchant and to the manufacturer of these various articles of Hardware and nails; and they open a wide realm for speculation as to their business customs, their competition, their bad debts and other details. We may wonder what manufacturer made those nails and whether the nail business was close then as now, and whether the redolent mummy would make nails again if he could return to earth to-day.

CARPENTER TOOLS.

Now as to the hand saw. It is a curious fact that the one shown on the tomb at Thebes, 4000 years ago, is the same in outline and construction as those we use to-day. How long it took for the evolution of the saw to establish that exact shape, and that particular place for the handle, we may not know; but we may well wonder that with our ingenuity and our constant endeavor to improve everything, we have never found that some other shape for the hand saw is better.

There is such an abundance of Hardware all through antiquity that I do not like to find fault; but I am struck with the fact that nowhere can I find the bolt and nut. Hence, of course, there is no ancient wrench of any kind.

Nor can I find the auger or bit, though the Egyptians had the breast drill — probably using it with any durable borer to worry out a hole, with the aid of emery or similar material. I can find no screw driver in ancient times, and no sign of the common slotted head screw.

PREHISTORIC DISCOUNTS.

It is manifest that if Vulcan could have sent to the nearest Hardware store for carriage and tire bolts, wood screws and assorted auger bits, he could have reduced the selling price of his chariots 66⅔ per cent. In the absence of axle nuts also, the picture shows something that looks like a corn cob used for a cotter pin. Vulcan had to make up for the absence of these things by good workmanship and beautifully mortised joints.

Archimedes is said to have invented the screw, but he does not appear to have described it, or to have put it on the market profitably. His experiments were more in the nature of a contrivance for raising water by means of the inclined plane.

FUTURE DISCOVERIES.

America has not yet revealed her mysteries, but the similarity of man and his advancement in all parts of the world prove to us that on this continent former generations have gone through the same stages of development, and have had intercourse with other nations of the earth, and have had knowledge of their progress and industries, and we may measure America's history by the revelation of other lands.

Who shall foretell the ruined cities that shall yet be unearthed on this continent or the wonderful tale of lost nations which they shall reveal? America has not yet uncovered her Pompeii, nor has she yet dug down to the ruins of previous cities found beneath the sites of her present busy marts. Who shall look ahead until all vestiges of our present civilization are lost in futurity, and all evidence of progress in Hardware and in art have decayed, and when all traces of our literature and history have disappeared?

TUBAL CAIN.

The Book of Genesis says that Tubal Cain forged iron for all kinds of purposes, and also wrought in bronze. The fact that his name should have come down through the ages as a cunning artificer, skilled to work in brass, means a great deal. It does not mean that he discovered or invented the use of metals, but it does mean that he, in some way, represented the progress of the mechanic arts in his section, and that he was a large manufacturer whose wares were sold to such distant parts that his name has become famous in the Hardware trade, and has been handed down to us almost as a saint. His traveling men doubtless pierced to many lands; his catalogue was complete and extensive, and the name of his concern was a guarantee of the quality of the goods.

HIRAM AND SOLOMON.

Hiram of Tyre, a widow's son, is also spoken of as a worker in brass, filled with wisdom and understanding, and cunning to work all works in brass. This includes a large line of goods, and no traveling man need be ashamed to offer it in any market.

We read that King Solomon sent for Hiram; and it is probable that he placed an order for Hardware for the temple which would make us turn green with envy. Josephus gives us a copy of Solomon's order for lumber, stating the terms of payment, time of delivery, &c., but, unfortunately, the specifications for the Hardware have not been preserved, to my knowledge.

HERODOTUS.

Herodotus speaks of a colossal basin, made of bronze, which was 60 times the size of that presented to the Temple of Jupiter Orios in Scythia. Its capacity was 600 amphoræ, and it was six fingers in thickness. In order to produce objects of this magnitude it was, of course, necessary to have large bronze foundries.

There can be no doubt that they existed throughout the Bronze Age, and that their products of various sorts have been marketed as we sell our Hardware products of to-day.

Prehistoric man was also so skilled in the melting and casting of bronze that he could travel from place to place and work at separate jobs in the villages. A hollow made in the ground was a suitable furnace, and with bellows and sand from the gutter he executed orders for metal work of various dimensions. History says he made nails and tacks and even worm screws with surprising facility. His fuel was the dry wood of the forest.

ANCIENT ART.

Hardware made rapid and magnificent strides after the dawn of the bronze era. Good designers lent their aid, and implements and weapons soon grew to be beautiful in outline and rich in ornamentation. Our best art of to-day but copies the Hardware which mankind devised long before the iron epoch began. Bronze swords, stilettoes, hatchets, paper knives, razors, combs, all implements of the kitchen, agricultural implements, tools of the artisan and decorations for the house soon became not only perfect for utility, but rich and elaborate in artistic merit. The reign of man became supreme and the day of progress dawned.

PALESTINE.

It brings the subject home to us more vividly to reflect that the boyhood of our Saviour was passed in a house attached to which was a carpenter's shop. On the walls of the shop hung the socket firmer chisel in various sizes, the hand saw, marking awl, the breast drill, and other tools familiar to us. The work bench held the plane, the rule, the square, and they were substantially the same as ours.

POMPEII.

I desired to give some time to the intensely interesting disclosures of Pompeii, in the Hardware development, but the subject is too great to begin upon. I can only hastily say that in the wonderful museum at Naples we find almost everything known to our latest Hardware of to-day, and in such elegance of design and workmanship that we are lost in admiration. They show many of the implements that we fail to find in other researches, and bring the past to our very doors. They have the dividers,

Hosted by Google

the steelyard, the fine metal rule, pliers, scales, nail puller, adjustable plane, beautiful surgical implements of all kinds, including surgical scissors and forceps of various shapes, all known implements for the toilet, saddlery most elaborate, locks, keys, door knockers, masons' trowel, scythe, soldering iron, anvil, plummet, liquid measures; and every known device for the kitchen and the bath, and even the bronze stove of artistic design.

THE IRON AGE.

Some authorities claim that iron was known about 1400 B. C., others limit it to a later period—after the capture of Troy. Heroid and Plutarch are of this latter opinion. Homer, however, mentions its use. Tubal Cain is said to have been cunning in iron; but no distinct mention of iron weapons or tools is made until after the Exodus. The Jews were acquainted with iron; and Moses mentions an iron furnace.

The difficulties of smelting the ore and reducing it to a malleable state rendered it less likely to be employed and much slower of discovery.

Who can predict the glories of the Iron Age, almost at the threshold of which we are now standing? Its magnificent achievements are already more wonderful than the tales of mythology. The forces of nature yet to be discovered will demand some accompanying development in the variety of goods we manufacture and sell. It is, indeed, a privilege to have so important a part in the advancement of civilization, which through the merchant and the salesman shall irresistibly spread to the uttermost parts of the earth. In this great work, my friends, we all have our part, and in faithfully performing it we are best serving our fellow man.

The Hardware Club of New York.

A MEETING of the Hardware Club of New York will be held in the parlors of the Cosmopolitan Hotel, corner of Chambers street and West Broadway, on Friday, December 22, at 2.30 p.m. The special object of the meeting is to receive reports from the Board of Governors as to the progress of the club, and to decide in regard to the furnishing of the rooms, which it is expected will soon be ready for occupancy. In view of the interest and importance of this meeting it is hoped that there will be a full attendance of the members.

Hardware Jobbers' Association of Pittsburgh and Wheeling.

THE regular monthly meeting of the Hardware Jobbers' Association of Pittsburgh and Wheeling was held in the offices of the Bindley Hardware Company, Pittsburgh, Pa., on Tuesday, December 12. W. C. Reitz of the Bindley Hardware Company, occupied the chair, while Mr. Fitzsimmons of James C. Lindsay & Co., Pittsburgh, was secretary. Among the concerns represented at the meeting were the Bindley Hardware Company, Logan, Gregg & Co., James C. Lindsay & Co. of Pittsburgh, Ott Brothers & Co., and Greer & Laing of Wheeling, W. Va. After some routine business had been transacted a number of communications from Hardware jobbers' associations located in New York, Rochester, N. Y., and several other places were taken up and necessary action taken. An informal discussion of the probable effects on the Hardware trade by the passage of the Wilson bill was then had. and after a full and thorough discussion of this subject, the following resolutions were adopted:

Whereas, The new tariff act known as the Wilson bill, as recommended by the Ways and Means Committee of the House of Representatives, and indorsed by President Cleveland (who urges its passage), is a direct blow to the industries of this country, which for thirty years has enjoyed under a protective system almost uninterrupted and marvelous prosperity; therefore.

Resolved, That we, the Hardware Jobbers' Association of Pittsburgh, Pa., and Wheeling, W. Va., do most solemnly protest against the passage, in its present shape, of the Wilson bill, and beg the committee to consider the depressed condition of the country caused by this unnecessary agitation.

Resolved, That kindred associations throughout the country be requested to send similar protests to the members of the House from their respective districts.

Resolved, That a copy of this resolution be forwarded immediately to Hon. John Dalzell, who so ably represents this district, for use in the committee.

Preliminary to the above meeting the members of the association assembled at the rooms of the Duquesne Club, in Pittsburgh, where a dinner was served and several hours were spent in social and profitable intercourse. The next regular monthly meeting of the association will be held in Pittsburgh, on Tuesday, January 2, 1894.

Massachusetts Hardware Dealers' Association.

THE Massachusetts Hardware Dealers' Association held their regular monthly meeting on Wednesday evening, 13th inst., at the United States Hotel, Boston. President Janvrin occupied the chair. After the business of the association had been transacted the members adjourned for dinner, at the conclusion of which the chairman introduced Professor Blish of the School of Oratory, who entertained the association with poems and humorous stories, all of which were favorably received. A. W. Parmelee, president of the Wire Goods Company, Worcester, was then introduced as the speaker of the evening, and read a very elaborate and able paper on ancient Hardware. This interesting paper is printed in full on another page. It was attentively listened to and highly appreciated, and in due course Mr. Parmelee received a vote of thanks from the members present.

The membership of the association is receiving constant accessions, fourteen new members having been added to the roll at the meeting reported above, as follows:

THOMAS RICHARDSON, Chelsea.
JOHN M. SMITH. Lawrence.
E. P. FLANDERS, Lawrence.
M. E. AUSTIN, Lawrence.
CORYDON H. FELLOWS, Haverhill.
J. H. SAYWARD, Haverhill.
M. WARREN HANSCOM, Haverhill.
FRANK B. DOW, Lowell.
J. ADAMS BARTLETT. Lowell.
AUSTIN WHITCOMB, Beverly.
JOSEPH W. HARDING, Lynn,
J. EDWIN PRICE, East Cambridge.
J. F. PENNELL, East Cambridge.
A. J. SILBERSTEIN, Boston.

The association is thus in a very flourishing condition, and has thus far fulfilled the best expectations of its founders.

The next meeting of the association, which will also be its first anniversary, will take place on February 14, and will be designated as ladies' night.

Bicycles for 1894.

SECOND ARTICLE.

Hardware Trade. — There is a marked tendency among manufacturers to deal directly with the retail Hardware trade, instead of with agents or through jobbers; and this, it is believed, will be of mutual benefit to both manufacturer and dealer. Exclusive control of a line of wheels is likely to be given to one dealer in a place, rather than selling to all or any who would buy.

Prices.—Although manufacturers are reticent about announcing prices before the first of the year, or until their plans for 1894 are matured, list prices of high grade machines for the coming year will range from $150 to $100, and prices having a wider range than during the past year, it is suggested that they will probably show less fluctuation.

The Relay Mfg. Company, Reading, Pa., announce that their Relay road racer special, weighing 28 pounds, will list $125; their road racer, 30 pounds, $115; their regular roadster, 38 pounds, $100, and their ladies wheel, $100. Rouse, Hazard & Co., Peoria, Ill., will reduce the list price of their Overland from $125 to $100.

Weights.—The popular range of weights include machines from 36 to 19 pounds, and the lighter wheels will usually carry the higher lists.

Style.—In most cases 1893 lines will prevail, with such improvements as have been suggested by experience and which it is considered will improve the machines. There is quite a general lengthening of the upright tube from the crank shaft to the seat post, resulting in a more nearly horizontal top tube. Other minor improvements include wider bearings, crank axle brackets, &c.

Tires and Rims.—Developments are being made in tires, of which a large number of new ones are being put upon the market. The principal features claimed for these are, less liability to puncture, greater ease in repairing, and greater facility in put-

Hosted by Google

ting on and taking off of the rims. Steel, aluminum and wood rims will be used, some of the wood rims being made of one solid piece, while others are laminated, or built up of glued layers.

THE PURITAN CYCLE WORKS COMPANY. Portland, Maine, will list their machines as they did for 1893: Model A, $150, weighing 23 pounds; Model B, $125, a roadster weighing 28 pounds, and Model D, $105, weighing 31 pounds. The company remark that Model D will be a first-class wheel in every respect; in workmanship and finish just as good as Model A. They will supply wood or steel rims with the Model A to order, giving riders of this machine a choice of tires, saddles, &c.; in fact, building the machine to order. In 1894 the company will sell direct to retailers, as they believe this is the way to enable retailers to pay their bills, giving them the extra discount now given to the jobber.

MCKEE & HARRINGTON, 173-175 Grand street, New York, and Lyndhurst, N. J., will make improvements in their Lyndhurst 1894 machines in several respects over their 1893 wheels, They will be made up in three hights of frame and will be fitted with wood rims. The crank axle will be adjustable on both ends to provide for alignment of gears.

METROPOLITAN CYCLE COMPANY, Reading, Pa., have raised the seat post of all their Neversink machines for 1894, and will use either Morgan & Wright or Eastern Rubber Company's tires, as desired. The company remark that they had no complaints of their 1893 frame straining, breaking or giving way in any particular, which they attribute to its construction. In this frame, they state, they get straight tensile and crushing strains, making their wheels easier riding, less fatiguing and more durable than the diamond pattern frame. They also manufacture a wheel of the Humber pattern; while they have several other styles in process of construction.

THE PEERLESS MFG. COMPANY, Cleveland, Ohio, makers of Triangle Bicycles, will have a line consisting of a full roadster, weighing 31 pounds, including mud guards and rubber pedals; a ladies' wheel, 30 pounds, including everything; a light roadster at 25 pounds and a 19-pound track racer. All these machines are referred to as being of the latest design and as strictly high grade in every feature, and, in addition, they possess some special mechanical features which would commend them to those in search of a high grade wheel. The company have put in their factory a considerable amount of improved and specially designed machinery. They have also made three additions to an already completed factory to enable them to turn out Bicycles promptly in large numbers.

H. B. SMITH MACHINE COMPANY, Smithville, N. J., will continue the manufacture of Lever Bicycles for the coming year. The line will include the special Pony Star, with solid or cushion tires; the Rover Star, with solid, cushion or pneumatic tires; the new Diamond frame lever safety, with solid, cushion or pneumatic tires: the ladies' lever Bicycle, with cushion tires; also a Diamond frame chain safety, Humber style. The Hotchkiss and Norcross Railroad Bicycles will be manufactured to order. Such slight improvements in details and tires will be added to their machines as the trade demand.

ELMORE MFG. COMPANY, Elmore, Ohio, will have for 1894 a line of Elmore Cycles, consisting of a roadster weighing 32 pounds, a ladies' wheel weighing 35 pounds, and a convertible tandem weighing 55 pounds. The company have made a few very important changes in both the roadster and ladies' wheel. The seat pillar on the roadster has been raised 3 inches, making the top tube nearly horizontal; and improvements have also been made in the handle bar and bearings. The ladies' wheel will be of the V-frame pattern. The tandem is designed as an ideal touring machine, light, attractive in design and moderate in cost, compared with the price of a single wheel.

THE MONARCH CYCLE COMPANY, Chicago, Ill., will make very few changes in connection with their line of Monarch wheels for 1894, especially in their road racer pattern and ladies' machine. The company remark that their pattern of 1893 is modern even for 1894. Their Model B will be changed in connection with the upright tube from the crank shaft to the seat post, this in future to be made straight instead of with a curve. The line includes Monarch road racer, Monarch roadster, Model A and B and ladies' Monarch.

THE ROCHESTER CYCLE MFG. COMPANY, Rochester, N. Y., will present for the selection of their agents for the season of 1894 eight different patterns, all of which, it is remarked, will be first class in every particular, containing all modern improvements, giving agents either hollow steel or wood rims and a choice of tires. They will continue making their double diamond frame, with double ball bearings, in three patterns: Rochester roadster, scorcher and high frame scorcher. In connection with these they are bringing out for '94 a complete line of single diamond frame Humber patterns, in the Rochester road racer, high frame road racer, Model A and ladies' Rochester. Among other features, the Rochester Model A will have wood rims, detachable saucer shaped drop forged sprocket wheel, bringing the chain directly over the crank axle ball bearing; crank axle of specially made steel, which will have no threads cut on it, thus adding to its strength; dust proof barrel pattern crank hanger, with ball races well separated, and Rochester pedals with covered centers. The machine complete, with tools and tool bag, will weigh 27 pounds. The weight of the ladies' Rochester, all on, will be 30 pounds.

THE YOST MFG. CO., Toledo, Ohio, will have a line of Falcon machines for 1894, composed of the Falcon road wheel, listed at $100 to $115, according to handle bar and tire used; the Falconess, for ladies; Falcon Junior, 24 and 26 inch, and Falcon Junior combination, 24 and 26 inch. Especial new features will include the Yost metallic fastened tire; the Cable adjustable handle bar, which can be thrown to any angle desired without the aid of a wrench, and can be changed so as to give either an upward or a downward turn; and a chain adjusting device. The machines will have long steering head, tapered front forks and large dust proof bearings. After exhaustive experiments the company have adopted larger balls throughout the bearings in their wheels, as this is found to lessen the friction very materially. All bushings and cones are cut from a solid bar of cold drawn steel and after being properly hardened are polished smooth to size by special machinery.

ROUSE, HAZARD & CO., Peoria, Ill., have absorbed the Rouse-Duryea Cycle Company, and will manufacture the Sylph, which has heretofore been made by the latter company. The Sylph has been greatly improved for 1894 and will be made in 30, 28, 26 and 22 pound weights. They are to be of the highest grade in every particular, and more attractive in design and finish. The Overland, made by the company, will be improved but slightly, as it gave perfect satisfaction during the past year and is considered thoroughly up to date. The list price of the Overland will be reduced from $125 to $100. The company will continue to make a specialty of the sundries of all kinds which they have handled many years. Their special bargain department will also be continued, and they will offer dealers Bicycles at greatly reduced prices as in years past. The company have been assigned large exclusive territory on the Western Wheel Works line of Bicycles, which goods they have handled for the last 14 years. These goods have heretofore been sold indiscriminately through numerous jobbers or any dealer that cared to handle them. But one agent in a town will now be appointed, to whom will be given the exclusive control of the line.

RELAY MFG. COMPANY, Reading, Pa., will list their Relay wheels for 1894 as follows: Road racer, special, 28 pounds, $125; road racer, 30 pounds, with new chain adjustment features, $115; regular roadster, 38 pounds, with brake attachments, $100; roadster, stripped, 35 pounds, $100; ladies' wheel, with a very low frame for easy mounting, $100. The road racer special has a specially constructed crank axle bracket of new design entirely dust proof, the diameter of which is in keeping with other proportions of tubes of the frame. Another feature is that which allows the rear wheel to be taken out without taking the chain apart. Riders who have handled an oily, dirty chain on the road in order to remove a rear wheel, it is remarked, will appreciate this improvement It also does away with the rear fork adjusting screws. The frame has been hightened, bringing the top tube nearly horizontal. There has also been introduced an entirely new principle of crank axle bracket, very wide in the bearings, yet without increasing the tread, and which will be oil containing. The company intend giving with every Relay gratis the Century Cyclometer, which they consider the most compact, simple and best.

Trade Items.

THE traveling representatives of the Reading Hardware Company, Reading, Pa., recently held their annual convention in the offices of that firm in the above named city. Among those present at the convention were W. H. Bennet, in charge of the Chicago branch office; Orton Hill, who looks after the trade in the Northeast; W. A. Kerr, who is in charge of the Southwestern trade; Fred. L. Stellwagen, New York; F. B. Henderson, Philadelphia; Isaac M. Rhodes, who looks after the Middle States, and W. E. Bartholomew of the Pacific Slope.

THE inactivity in the building trades, as well as difficulty in collecting on outstanding accounts, is causing havoc in the ranks of those who handle building materials and house furnishings. The Henry Dibblee Company, 150 Michigan avenue, Chicago, an important concern in this line, failed on the 13th inst., having confessed judgments to the amount of about $35,800. The amounts claimed by the creditors separately were: The Northwestern National Bank, $15,939; A. A. Sprague, O. S. A. Sprague, C. H. Morse, and A. C. Bartlett, $11,160; Silas A. Barton, $7561, and Mrs. P. McDowell, $1062. The company made a specialty of high class mantels and grates.

THE CHICAGO STAMPING COMPANY, 227 to 231 South Green street, Chicago,

Hosted by Google

announce the appointment of W. L. Goodrich to the entire charge of their city and country sales. Mr. Goodrich has been connected with the Metal and Tinware trade for the past 25 years, and has a very wide acquaintance throughout the Hardware interests of the Northwest.

WE WOULD COMMEND to the attention of manufacturers who are desirous of making arrangements for the representation of their goods to the trade the announcement among the Special Notices in this issue signed "W. S. G.," a gentleman who has a wide acquaintance with the trade and is desirous of obtaining one or two agencies in addition to those of manufacturers whom he is now representing.

JOHN H. BAIRD, who represented the Jos. Dixon Crucible Company of Jersey City, at the World's Fair, has published a charming little *brochure* giving his reminiscences of the exposition. Mr. Baird is of a poetic temperament, and has been deeply impressed by the greatness of the fair, so that the vigorous prose in which he has clothed his thoughts glows with enthusiasm. The many friends of Mr. Baird will value this work as a memento of his personality as well as a souvenir of the exposition itself.

THE RAZORINE MFG. COMPANY, 2 West Fourteenth street, New York, have prepared card stands upon which are fastened a dozen cakes of Razorine for advertising purposes. Above the packages is printed matter calling attention to the merits of the preparation and announcing that by its use the dullest razor can be sharpened. The company are prepared to offer liberal inducements to merchants to insure the more rapid introduction of this specialty.

MUDGE & BENJAMIN is the style of a firm which has recently entered the Hardware and House Furnishing Goods business at Olean, N. Y. They will give particular attention to retailing, but will also, they advise us, conduct a wholesale business. The new firm will be glad to receive catalogues, circulars, &c., from manufacturers and importers.

A NEW HARDWARE STORE has just been opened at Beeville, Texas, by Burrows Bros., who will conduct it in connection with their establishment at Rockport, Texas.

IN A LARGE FIRE at Syracuse, N. Y., on December 8 the large and well-known wholesale Hardware house of Robert McCarthy & Son was burned out. The entire stock, as well as the building, was destroyed. The loss is estimated at about $70,000, which is very nearly covered by insurance. The present year completed Mr. McCarthy's forty-eighth year in business. Mr. McCarthy is referred to as not only the oldest active merchant in Syracuse, but the oldest merchant as well. We are advised that as soon as arrangements can be made the business will be continued.

R. S. THOMPSON, senior member of the firm of R. S. Thompson & Son, Pine Bluff, Ark., died on December 5. On the previous evening Mr. Thompson was suddenly attacked with heart failure, from which he never completely rallied, though he was conscious until a short time before his death. The business of the firm will be hereafter conducted by R. C. Thompson.

JOHN D. WARREN of Burlington, Iowa, who has been connected with Simmons Hardware Company, St. Louis, for a number of years as a salesman, has established the Manufacturers' Distributing Company, with headquarters at Chicago. Under his charge will also be the output of a Burlington factory, of a distinctive line of shelving, together with a catalogue case, cabinet and desk combined, which embody ideas resulting from years of travel and observation as to what is best suited to the requirements of Hardware merchants.

THE BILLINGS & SPENCER COMPANY of Hartford, Conn., have opened a Western office at 59 South Canal street, Chicago, Ill., in charge of W. A. Davis. A complete line of all their goods will be shown there.

THE JEFFREY MFG. COMPANY, Columbus, Ohio, have ready for distribution a complete catalogue, showing full size illustrations of every Chain Link made by them. It also includes a complete price-list of their specialties and will be of value to users of material in their line.

THE PHILADELPHIA BRANCH HOUSE of Jenkins Bros. will shortly remove from their present address to 117 North Fourth street.

BRONSON SUPPLY COMPANY, 72 Beekman street, New York, have been offering special inducements, which hold good until December 31, to merchants on season goods suitable for holiday and regular trade. They selected five leading sellers from the production of their several companies and have made the price extremely low. Two are of their Seamless Steel Never Break Ware, a brass Umbrella Holder of the Ideal specialties, one from the Puritan line of cooking utensils and a baking and roasting Pan of the Excelsior kind. They direct the attention of the trade to the plan and refer to it as producing satisfactory results.

THE BILLINGS & SPENCER COMPANY of Hartford, Conn., have disposed of their interest in the Spencer Nail Puller. In future any information regarding this device may be obtained by addressing C. M. Spencer, Windsor, Conn.

THE HARDWARE AND CARRIAGE MATERIAL BUSINESS formerly carried on by the firm of Chas. Wing & Co., Amesbury, Mass., is now being conducted under the style of the Chas. Wing Company. Wm. W. Hawkes is president and treasurer of the new company and Chas. A. Steere secretary.

Hermann Boker & Co.

HERMANN BOKER & CO., 101–103 Duane street, New York, have completed arrangements for the marketing of several new lines of goods. One of these will be the Screw Drivers made by Augusta Machine Works, Augusta, Maine. The assortment consists of 28 styles and sizes, including the patterns known as New York Nos. 1 and 2, handy, plain, ratchet and spiral. Another line will be that of Wm. Wilkinson & Co., Reading, Pa., makers of American Sheep Shears. These include Hand Forged, Solid Steel and California patterns, and also Grass, Horse or Mule and Hedge Shears. They are prepared to make special patterns in suitable quantities, stamped any brand to suit customers. In addition to the above Messrs. Boker & Co. also have the agency for Johnson & Bro. Files. For all the above goods they are sole agents in this country, Canada, and for foreign markets, and control the entire product.

Price-Lists, Circulars, &c.

HULBERT BROTHERS & CO., 26 West Twenty-third street, New York: Seasonable goods for fall and winter. Circulars illustrate single and double Chest Weights, Fencing Foils, Venetian Bent Iron Work, Torkelson Double Barrel Hammerless Breech Loader, Hopkins & Allen Acme Hammerless Double Action Revolvers, Rifles, &c.

THE J. D. SMITH FOUNDRY SUPPLY COMPANY, Cincinnati, Ohio: Supplementary Catalogue No. 16. A full line of Monk's Molders' Solid Steel Tools are shown, including a number of the latest shapes and sizes of handy tools, suggested by practical molders. Illustrations of the goods are accompanied by descriptions and prices.

CENTRAL ELECTRIC HEATING COMPANY, 26–28 Cortlandt street, New York: Electric Heating apparatus for cooking, and for domestic and industrial purposes generally, and for heating cars, buildings, steamships, &c. Illustrations are shown of Portable Heaters; Laundry, Tailor, Hat Irons, &c.; Soldering Coppers, Ovens, Clothes Boilers, Spiders, Chafing Dishes, Farina Boilers, Stew Pans, Tea Kettles, Tea and Coffee Pots, Coffee Urns, &c. An illustration represents an electric kitchen, showing Electric Cooking Utensils in use. Each article or utensil is connected to a separate electric wire, so that electricity for generating heat may be turned on or off at pleasure.

NORTON DOOR CHECK AND SPRING COMPANY, Charles S. Penhallow, treasurer, 505 Sears Building, Boston: the Norton Door Check and Spring. The device is described in an illustrated circular. It is explained that the parts of the device are so arranged that the greater the force exerted to close the door the greater resistance will be offered, consequently no slam or jar can occur.

BRYDEN HORSE SHOE COMPANY, Catasauqua, Pa: Boss Horse and Mule Shoes. A neat memorandum book bound in celluloid and leather for 1894 is being distributed by the company. Any customer of a merchant who is a horseshoer can obtain one of these books, it is announced, by sending his address to the factory.

THE STANDARD LIGHTING COMPANY, Cleveland, Ohio: 1894 calendar. The company issue a tasty calendar. Attention is directed to their New Process Vapor Stove, which is among the most prominent of their manufactured goods.

THE CLEVELAND STAMPING & TOOL COMPANY, Cleveland, Ohio: Solid Steel Seamless Hollow Ware. An illustrated price-list shows Spiders, Griddles and Broilers in this ware. In addition to these goods the manufacturers press, cut, stamp and draw all kinds of sheet metal into all kinds of shapes, and make all kinds of dies and presses. Prices will be made on articles to be made or on machinery to make them by the company.

WABASH ANTI-RATTLER COMPANY, Wabash, Ind.: I.X.L. steel anti-rattler and superior wire anti-rattler. An illustrated circular describes the wire one as being shaped so as to be easily put in place; and the steel one as possessing the same advantages. Both styles are packed in quarter gross pair boxes.

S. C. JOHNSON, Racine, Wis.: Wrought Steel Center Neck Yoke. Pamphlets, with illustrations, describe the Center as being made of sheet steel stamped into form, allowing it to be bent under great pressure, but not

Hosted by Google

broken. The Centers are furnished separate or the Yokes complete.

THE WISCONSIN REFRIGERATOR COMPANY, Eau Claire, Wis.: Illustrated catalogue and price-list for 1894. A pamphlet of 36 pages bound in stiff paper covers describes the Wisconsin Peerless, hard wood, dry air household Refrigerators, Ice Chests, grocers' hotel and butchers' sectional Refrigerators, sideboard Refrigerators, &c. The general construction of these Refrigerators is thoroughly explained and sectional cuts are given showing how the walls and flues are arranged and the manner in which the air is kept in constant circulation in the interior. Stress is laid on the use of mineral wool filling and its high rank as a non-conductor of heat. The ice rack is made of galvanized steel beams to prevent the rack from bending or sagging, the lock brings the door to a tight joint automatically, and the drip cup has an extension pipe which brings the drip water to the front of the Refrigerator, so that the pan is always in plain sight. The styles of Refrigerators illustrated comprise a very great variety of pleasing patterns, the sideboard constructions being particularly attractive. Allusion is made to the selection of the company's Refrigerator by the United States Government for exhibition in the National Museum of Hygiene, at Washington. The demand for their goods has been so great that each year since 1891 they have been obliged to enlarge their plant and increase their productive capacity.

J. M. Warren & Co.

THE WAREHOUSES of J. M. Warren & Co., Troy, N. Y., were badly damaged by fire on the 14th inst. The warehouses are 50 x 80 feet in dimensions, one being five stories high and the other six stories high. The fire originated on the fifth floor of the latter building. The roofs of the warehouses were entirely consumed, and the two upper floors of one building and the top floor of the other were very badly burned, the stock in these lofts being a total loss. The fire also destroyed a bridge connecting one of the warehouses with the firm's main building, in which the store and office are located, and which is five stories in hight, 50 x 80 feet in dimensions. When this bridge was destroyed by the flames it was feared they would communicate with the main building, but by vigorous work on the part of the firemen this was avoided, the loss in the store building being one of water only. The lower floors of the warehouse were, of course, thoroughly saturated with water, which makes the firm's loss very heavy, but not accurately known at the present time. The entire loss is roughly estimated at $100,000, which, it is thought, is almost covered by insurance. The condition of the buildings and stock is such that the firm are necessarily inconvenienced very much at present, and it may be a few days before they will be able to resume their business in full, but as their main building is intact and the goods only damaged by moisture they hope within a week at least to be in good running order. J. M. Warren & Co. are the oldest Hardware firm in Troy, the original business having been founded by Jacob Hart and Henry Nazro in 1809. The firm style was changed to Hart & Pitcher in 1821, and in 1824 became Craft, Hart & Pitcher. Mr. Craft retired in 1830 and was succeeded by Hart & Pitcher. The following year the firm of Pitcher, Hart & Card was formed. They were succeeded by Hart, Lesley & Warren in 1836. Joseph M. Warren became a partner in 1840, and the name was changed to Warren, Hart & Lesley. In 1855 Mr. Warren and Charles W. Tillinghast succeed to the business under the name of J. M. Warren & Co. Walter P. Warren was admitted to partnership in 1864, as was also Thomas A. Tillinghast in 1867. Walter P. Warren withdrew in 1871, while Thomas A. Tillinghast died in 1879. In 1870 the firm erected the handsome structure they now occupy. The present organization were incorporated in February, 1887.

Foreign Correspondence.

THE following communication, which refers to the practice of sending catalogues in English to Spanish speaking countries, is from a gentleman who has recently returned from a trip through South and Central America. The suggestion is deserving of attention:

It should interest Hardware manufacturers in the United States of America to learn that much time and money are wasted by sending trade circulars, catalogues, &c., printed in English for circulation in South and Central America, where Spanish is the language of commerce, as of the people. This fact has been already noted and promptly acted upon by the leading manufacturers of Europe, whose circulars and other advertising matter are read and attended to, while those of their North American rivals, published in English, often find a resting place in the waste paper basket. Being unintelligible, they are uninteresting,

The writer speaks from an experience gained in many miles of travel through those countries, and not being in the Hardware line he can afford to give the tip gratis.

As bearing on this subject it is of interest to know that the export agent in this city for a number of American agricultural implement makers, perceiving the necessity of having within the limits of his office facilities for at once ascertaining the contents of the constantly increasing number of foreign letters from many sections of the globe, has secured the services of a stenographer-typewriter who is equal to the translation either way of anything in English, German, French, Spanish, Italian and Hungarian. Such letters on receipt are submitted for translation, and a typewritten copy is made, which is attached to the original. This insures expedition and the keeping of business secrets among trusted employees, besides minimizing errors, as the work is done by one who is familiar with the office's customs and history. While, at the same time, such answer as is made is given in the native language of the party to whom it is addressed. This must be of much advantage to him, for it must be remembered that comparatively few cities are as cosmopolitan as New York, and abroad it is not so easy to get translations, especially in smaller towns. Many foreign merchants for obvious reasons much prefer to read their communications first themselves, especially if customs and other questions are involved. A little thought will make it plain to those doing an export trade how much more can be accomplished by sending letters, circulars, invoices, catalogues or any class of literature of this nature when feasible and practicable in the language of those who are expected to read it. Many are following this method, and many have done so for years, but the more this plan is extended the better will be the results.

Trade in Australia.

ADVICES which have recently come to hand indicate that a moderate improvement has taken place in Australian affairs, and late mails are bringing somewhat better orders. While there is nothing marked in this direction, the situation has apparently cleared considerably, and the Australian people are realizing more and more that the real wealth of the country must largely come out of the ground in the way of crops or minerals. This conviction is inducing many to leave centers of population, such as Melbourne, Ballarat and Bendigo in Victoria, which have a population approximately of 525,000 souls in a total population for that colony of about 1,000,000, and turn their attention to tilling and developing the soil. While the collapse there was very severe and will doubtless take years to repair, it is thought that everything is on a sounder and healthier basis, which will ultimately greatly benefit the colonies. The present wool clip is believed to be the largest ever taken, and is estimated to be worth £20,000,000. This fleece, owing to the equable climate, is said to be of very fine quality and indispensable for blending with other wools in the production of fine cloths. Should tariff changes here result in placing this important staple on the free list it would be of great assistance to the Australian colonies from the fact that it would provide a broader market and enhance the price. At present this product goes almost exclusively to England, as do the greater portion of their other exports, which include hides, fruits, wine, butter, tallow, &c.

Another phase of the question is, as presented by exporters, that should this product be brought here largely it would provide return cargoes for vessels from this country, taking out raw materials and manufactured goods, which would not only enlarge our market but have a tendency to modify freight rates. Vessels could then be chartered at a lower rate, if assurance were given of a cargo back, instead of either lying there for weeks or going elsewhere for freight. The present crop of wheat, which is now being garnered, is very large and promises well. The output of gold from the mines is also said to be greater than formerly, It has been the custom heretofore to settle the large balance of trade against the colonies with borrowed capital, drawn largely from Great Britain. As this resource has been curtailed, the only way to compensate for the loss will be to cultivate and raise more. Large amounts of money are tied up by the process of liquidation, owing to the system on which loans have long been made. This will require from two to six years, and in extreme cases much more time. Great amounts have long been advanced on station (synonymous with our word ranch) and similar property, which will take time to turn over except at great sacrifices. Another sign which is regarded as favorable to the future welfare of Australia is the recent floating of loans in Victoria, New South Wales and Western Australia, aggregating £5,000,000

Hosted by Google

in round figures, at from 1 to 3 per cent. above par.

It Is Reported--

That the Hardware store of Brindley, Drennan & Co., Swanton, Ohio, was burglarized on the 4th inst. About $25 worth of goods were taken.

That the Hardware dealers of New Albany, Ind., have donated to that city a supply of Picks to be used in the street repairs.

That William Jenkins' Hardware store, at Oxford, Mass., was robbed on the 31st inst. Razors and Pocket Knives comprised the booty.

That John Holker has retired from the firm of William Holker & Co., dealers in Stoves, House Furnishing Goods, &c., Newburyport, Mass., and William Holker will hereafter conduct the business alone.

That J. M. Schram's Hardware store at Ridgway, Pa., was destroyed by fire on the 12th inst. Loss, $7000; fully insured.

That the Hardware store of A. M. Churchill, Morrisville, Vt., was slightly damaged by a fire in that place on the 13th inst.

That a newsboy, while attempting to sell a paper in S. L. Boyce & Son's Hardware store at Port Huron, Mich., on the 9th inst., entered the office during the bookkeeper's absence, and unlocking the money drawer of the safe, abstracted a pocketbook containing $40. The boy was subsequently arrested.

That F. A. Beltz, Boyd, Minn., has sold a half interest in his Hardware store to P. Golden.

That in the tornado which visited Harrisburg, Ill., on the 15th inst., the Hardware store of J. S. Ferguson was unroofed.

That A. F. Anderson has bought the Hardware store of H. S. Rich & Co., Red Wing, Minn.

That M. M. Davidson has sold his Hardware stock at Tipton, Iowa, to William Muhs of Milwaukee. Mr. Muhs will take possession the first of the year.

That on the 12th inst. fire destroyed the Hardware store of Bartlett & Mallett, Groton, S. D. Loss on stock, $7000; insurance, $4500; loss on building, $2000; insurance, $1400.

That D. Thompson has bought A. H. Nichols' Hardware store, at Marlette, Mich.

That U. P. Solberg has purchased a new Hardware store at Sioux Center, Iowa.

That A. L. Johnson's Hardware store, at Blaine, Wash., was burglarized on the 5th inst. The thieves broke in the side window and carried away about $100 worth of Pistols and Cutlery.

That V. P. Moore, Adairville, Ky., has sold a half interest in his Hardware store to Morris Barker of Keysburg.

That J. W. James has sold his Hardware store at Point Pleasant, Ohio, to Hoopman Bros. of Byesville. Possession will be taken January 1.

That Steer & Church, Coleman, Mich., have purchased S. S. Tower's stock of Hardware and removed it to their store.

That Mr. Yost has recently entered the Hardware business at St. Louis, Mich.

That F. C. Dickson has leased the Weyh Building, Armour, S. D., and will put in a complete stock of Hardware. Mr. Taylor, a nephew of Mr. Dickson, will have charge of the store.

That Grate Bros., Hardware merchants, Carondelet, Mo., hope to have their new brick store completed by the first of the year.

That Huddle & Shoemaker, Ashley, Ohio, have sold out their entire stock of Hardware, Farming Implements, &c., to Wesley McCurdy and John Olds. The firm name will be Olds & McCurdy.

That the Hardware firm of Godley & Watson, Oberlin, Ohio, was dissolved on the 4th inst, and a new partnership formed. Mr. Godley purchased the half interest of Mr. Watson and subsequently sold it to David E. Morris, the firm name becoming Godley & Morris.

That R. W. Maben of Garner, Iowa, has traded his stock of furniture for a stock of Hardware in the southern part of the State.

That the Hardware firms of C. S. Bucktel and S. G. Empey, Tobias, Neb., have consolidated, and will hereafter be managed by C. S. Bucktel. A part of both stocks will be moved to Swanton, and a branch store opened there.

That Baily & Storch, Hardware merchants, Fullerton, Neb., have purchased the Hardware stock of Sprague Bros., Belgrade, Neb., and will conduct it as a branch store.

Paints and Colors.

In the wholesale branch of the trade interest has centered largely upon what may happen after the turn of the year. The natural tendency is to look for something since competition in certain lines is more formidable than it was a year ago, the cost of some varieties of base material lower and the outlook darker for manufacturers who may endeavor to arbitrarily maintain prices. Actual business is commonplace in the strictest meaning of the term. There is practically nothing doing in round lots of goods for future delivery, and spot dealings are practically of a retail character. There is no sign of speculation in any line of goods. In fact, the only speculation is mental, with the possible action of the National Lead Company the center of gravitation.

White Lead.—There is virtually no market at present. What does exist as apology for a market is a very poor affair. It is retail in character, small at that, and affected at all manner of prices.

Red Lead and Litharge.—The quiet condition of affairs that prevailed a week ago exists at the present time.

Orange Mineral.—Foreign sorts are a trifle irregular in price. American is unchanged and very slow of sale.

Zincs.—While prices are not quoted lower by manufacturers, the market for American Oxide shows rather weak tone. Foreign brands sell at somewhat irregular prices in jobbing circles, but importers quote the old list and discounts.

Colors.—Dry Colors of all descriptions have met with limited sale during the past week. Oil Colors are not offered as freely as they were at the time that the price of Oil was down to 38¢ @ 40¢.

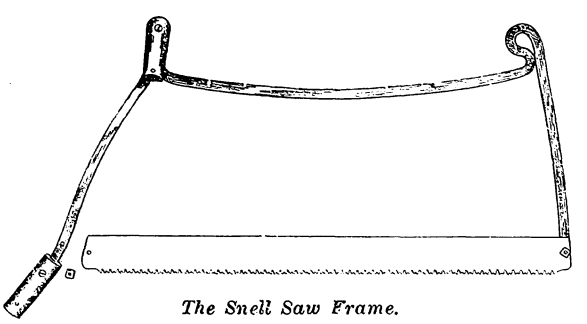
Oils and Turpentine.

Features of distinctly new character have not materialized. A certain amount of curiosity still centers around Linseed Oil, owing to the further rise in cost of raw material, and the movements in price of Lard have served to excite at least livelier curious interest in Lard Oil and Cotton Seed products. However, it does not appear that much business has been brought about in any of the respective lines. Other branches of the market have experienced the tameness that is common at this season of the year, and prices have undergone but little variation.

Linseed Oil.—At the higher prices established last week merely a routine business has been done.

Cotton Seed Oils.—From the extreme lowest prices touched last week there has been a recovery of about 1¢ on prime Crude and prime Summer Yellow, with partial reaction on the lower grades. Business has been moderate and the demand has continued tame.

Lard Oil.—High grade stock holds its own remarkably well, city brands going at 72¢ @ 73¢ and Western at 1¢ @ 2¢ less. The lower grades have not fared as well in point of movement and do not bring relatively as good prices.



Fish Oils.—Little, if anything, more than routine business in crude Sperm, Whale or Menhaden Oils have been effected. The Pressed and Bleached products have also been quiet and without important change in value.

Mineral Oils.—The general features of the market are without noteworthy change. Paraffines and cylinder stocks are in good demand, especially for export. For higher cold test Black Oils there is a fair inquiry, and neutral filtered are in moderate request. Prices are unchanged.

Spirits Turpentine.—It has been what may fairly be termed a very even market. Late dealings were at 29¢ for regular and 29½¢ for machine barrels.

The Snell Saw Frame.

Butler Mfg. Company, Boston, Mass., are offering a steel frame for wood saws as herewith shown. The spring in the frame, it is stated, brings from 80 to 100 pounds tension on the blade, making it impossible for the blade to double or to break. The frame is fitted with wooden handles, and, it is remarked, has little weight, but just enough to make it work fast; that a large log can be sawed through without coming in contact with the frame, and that it will last the purchaser a lifetime.

The Snell Saw Frame.

Vest Pocket Magazine Camera.

Magic Introduction Company, 321 Broadway, New York, are just marketing a vest pocket magazine snap shot nickeled camera, as illustrated in Figs.

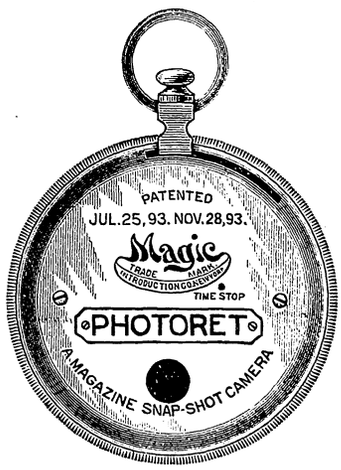

Fig. 1.—Vest Pocket Magazine Camera, Three-Quarter Size.

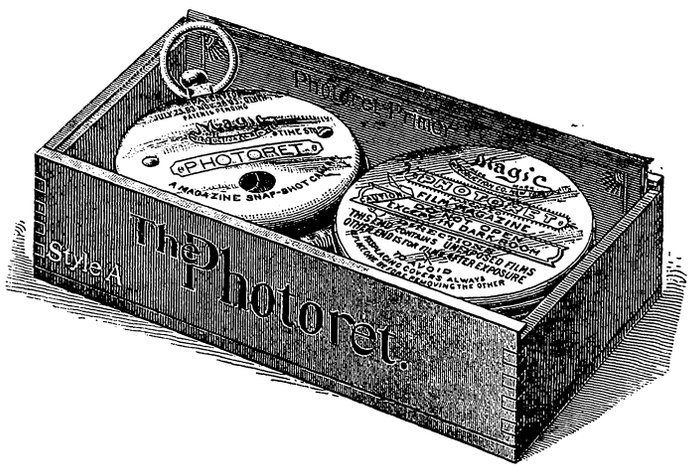
1, 2, 3 and 4, which they have named Photoret. As will be seen in Fig. 1, it takes the form of a watch. It is $2\frac{3}{8}$ inches across the face and $\frac{3}{4}$ inch thick. Its convenience and portability make it possible to carry it about the person, ready for use in an instant to catch any desired view. The negatives can be developed and printed by the individual, the Magic Introduction Com-

Fig. 2.—Sectional View, Indicating One Complete Revolution and Six Exposures.

pany, or any professional, at the option of the operator. By a simple device snap shots, or time exposures, can be taken at will. It is not the intention here to minutely describe the method of operation, the company having issued a primer of 32 pages covering the whole subject, which can be had on

Fig. 3.—Sectional View, Showing Camera with New Film Ready for Six Exposures.

application. Fig. 1 shows the general appearance of the Photoret. The lens, which is protected by a brass shutter, is just back of the large black spot. A film having been placed in the camera, by pressing the stem push button, the shutter is made to expose the film. Time exposures are obtained by inserting a pin or similar piece of metal in the small hole over the words "time stop," which permits the time to be regulated. Fig. 2 illustrates the manner in which the fact that the camera is unwound and ready for a new film is indicated. Every time an exposure is made it is automatically recorded by numbers 1 to 6 engraved on the film holder, which shows through the aperture. Fig. 3 shows that the camera has received a new film and is ready for use. Fig. 4 illustrates the way in which the goods are sent out. A round metal film box, $2\frac{1}{4} \times \frac{7}{8}$ inches in size, is divided horizontally in the center. Each side has a metal screw cap, and the separate compartments are for fresh films and those already used. The caps are suitably labeled and to prevent confusion are not interchangeable. The



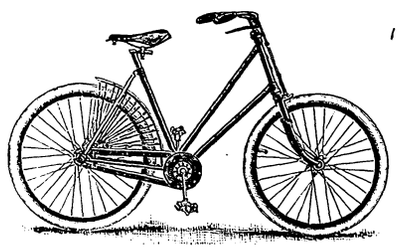


Fig. 4.—Box Containing Photoret and Film Magazine.

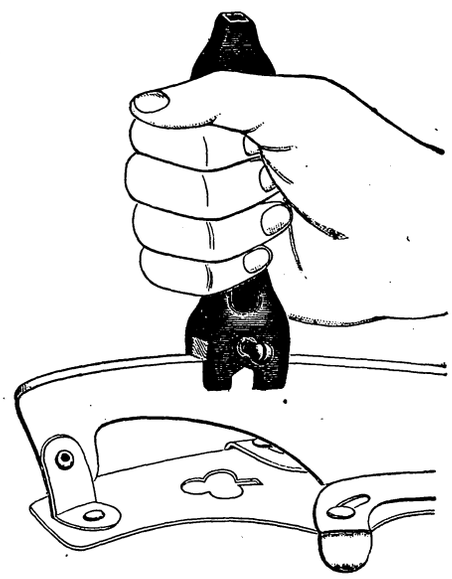
camera and film box, with primer, giving full directions, are packed in a neat varnished, dovetailed wooden box, with slide cover, the extreme dimensions of which are 5 x $2\frac{3}{4}$ x $1\frac{3}{8}$ inches. The negatives obtained are a little over half an inch square, while specimen enlargements up to $3\frac{1}{2} \times 3\frac{1}{2}$ inches are shown in the printed matter issued by the Company. Various sets of supplies are sent for any who wish to complete the detail of making a picture.

Ladies' Rochester Safety.

Rochester Cycle Mfg. Company, 75 South St. Paul street, Rochester, N. Y., are putting a ladies' safety on the market, as illustrated herewith. The wheel has a frame of weldless steel tubing and steel drop forgings. The wheels are 26-inch front and rear, fitted with wood rims, drawn tangent spokes enlarged at both ends and nipples of hard brass. Pneumatic tires $1\frac{3}{4}$ inch are used; also $\frac{7}{8}$-inch handle bars tapered to $\frac{3}{4}$ inch, of the raised pattern, fitted with cork handles and Sager ladies' saddle. The



Ladies' Rochester Safety.

machine has special tool steel round detachable cranks, 6 inches long; $\frac{5}{16}$-inch hardened block steel chain; plunger brake to front wheel and 11-inch ball bearing steering head. Tool steel ball bearings are supplied to all parts; metal guards to rear wheel and chain; also laced dress guards. The tread is 6 inches and the machine is geared to 56 inches unless otherwise ordered. The weight of the whole is 30 pounds. The following are optional: Loop seat post, 59 or 62 gear, color of rims and Rochester regular drop bars.

Boys' Lightning Skate Sharpener.

The cut herewith given represents the Boys' Lightning skate sharpener, put on the market by the Sandwich Novelty Company, Sandwich, Ill. The sharpener has in combination a skate key and wrench, all made of malleable iron, and referred to as light, strong and durable. It is remarked that the files are of the best hardened steel, that they are square, with four sides available for use, thus lasting a long time, and that when worn out

Boys' Lightning Skate Sharpener.

they can be replaced at slight expense. The manufacturers claim that with the sharpener a boy can put the dullest pair of skates in fine shape in from 3 to 5 minutes.

John G. Rollins & Co., 4 Stone street, New York, and Old Swan wharf, London, are introducing into this country a carbon for arc electric lights, which they refer to as being of high grade and superior in quality. They are made of a peculiar grade of coke obtained in Europe, the source of supply, it is claimed, being controlled by the manufacturers for whom they act.

Myers' Sure Grip Hay Sling Carriers.

The accompanying cuts represent hay sling carriers, put on the market by F. E. Myers & Bro., Ashland, Ohio. Their object in the construction of this machine was to make a device that would have unusual capacity for unloading hay, sheaf grain, corn fodder and all kinds of crops, by using what is termed a sling in the wagon whereby the load is divided into three or four bundles as the operator may desire, or its construction is adapted to the use of two hay forks, one on each pulley block, as shown in Fig. 1. By removing one pulley block, as in Fig. 2, it may be operated as an ordinary hay carrier with one hay fork. The pulleys are arranged with loose pins, so the block may be easily removed. It is explained that to make a carrier that will answer for these different methods of unloading hay and grain requires a lock that will register and retain any sized bundle at any point of elevation. The machine was therefore constructed with a rope lock, which is accomplished by tilting the pulley in the carrier, allowing the rubber block to remain in a fixed position, as shown in Fig. 2. It is stated that when the carrier is retained in the stop while elevating the bundle the working parts are perfectly free, but that the instant the pulley blocks strike the depending bail, or are tripped by the hand trip, and the carrier moves away from the stop the weight of the load causes the rope sheave to travel back against the rubber block, gripping the rope firmly and retaining the bundle. It is also stated that the operation of retaining the bundle is a self-compensating device, and additional load means additional power with which to retain it, making a positive and reliable lock for retaining any sized bundle at any elevation. To allow a bundle of hay to be carried over into a mow, in barns without cross timbers, immediately after it is elevated sufficiently to be free from the load a tripping device is attached to the depending arm, whereby the operator in the wagon has full control to release the carrier from the stop the instant the load is elevated sufficiently to travel into the mow by simply tripping the lock device by means of the small rope. Attention is called to the fact that the carrier is swivel reversible, that it will operate equally well in either direction from the stop, the stop being so arranged as to allow the carrier to approach it in any manner or from any direction it may come, and that it will reverse whether in the stop or away from the stop. The rope wheel in the carrier is six inches in diameter, to give it power in elevating the bundle. The carrier is constructed throughout of malleable iron and steel, and is made unusually strong in all its parts, as it is designed for hard usage and to elevate heavy loads. It is remarked that the slings used in connection with the carrier trip in the center and have two spreaders to each half.

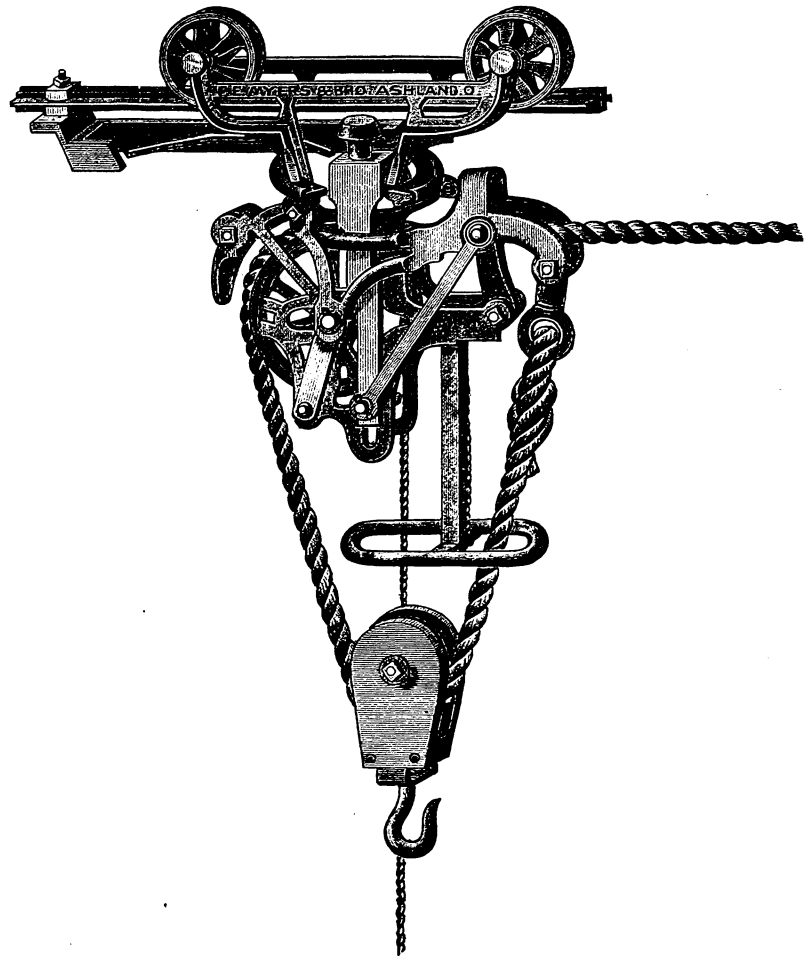

Fig. 2.—Hay Carrier No. 496.

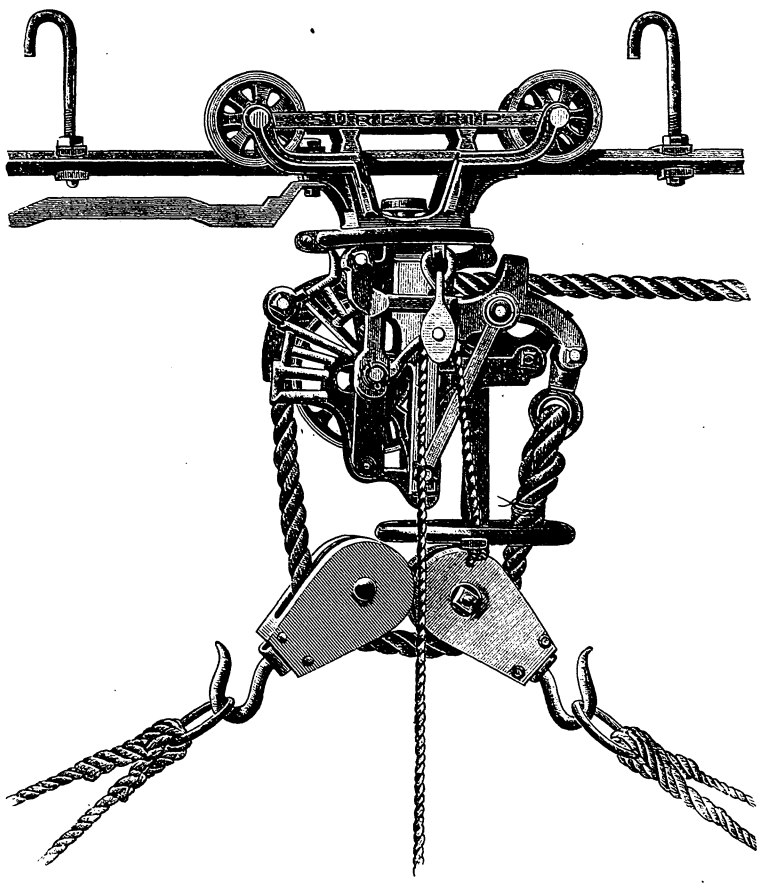

Fig. 1.—Hay Carrier No. 489.

Gross Mfg. Company, 20 Murray street, New York, are introducing a novelty known as an apron supporter, adapted for either sex. It is simply a strip of flat steel ⅛ inch wide, nickeled, with rounded edges, so made that when adjusted to the person it fits any figure. When in use a light pressure keeps it in place, obviating the use of strings, bands, buttons, &c. It is quickly slipped through the apron band, and can be had in 11 sizes from 22 to 32 inches, and larger ones to order. The same principle is applied as a bib or napkin supporter for use around the neck. These may be had in 10 to 16 inch sizes. With the latter are furnished two clamps for holding a bib, napkin, towel or similar article, ac-

Hosted by Google

cording to the use for which it is intended. Both articles are made in steel, nickeled or japanned.

The Bardsley Liquid Door Check and Spring.

J. Bardsley, 149-151 Baxter street, New York, is introducing a door check and spring, as shown in the accompanying illustrations. The checking is done by means of a liquid, with which, it is remarked, as there is almost an entire absence of friction, the whole of the spring power is devoted to closing the door. In Fig. 1 the device is shown attached to the hinged side of a right hand door, while in Fig. 2 it is attached by means of a bracket to the side of a left hand door away from the hinges. The check and spring is made in five sizes, of sufficient range to operate doors from small to large sizes. As announced in his advertisement in another column, Mr. Bardsley is desirous of obtaining agents for the sale of this door check and spring in the principal towns and cities.

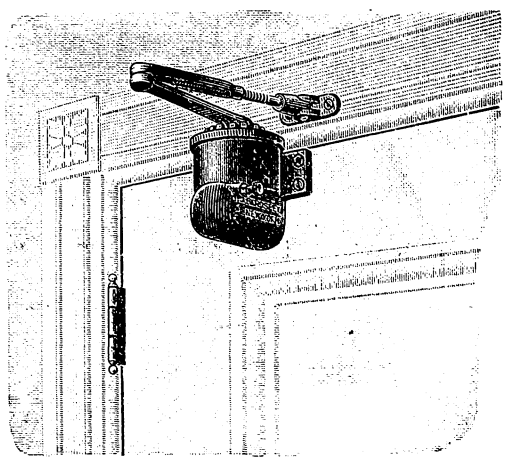

Fig. 1.—Bardsley's Liquid Door Check and Spring.

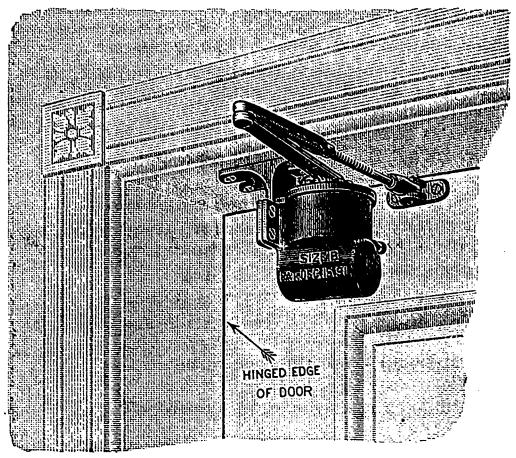

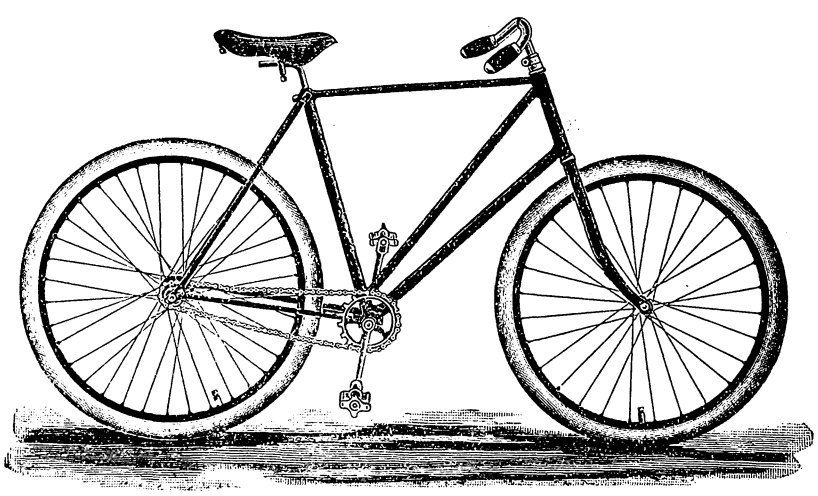

Fig. 2.—Check and Spring Attached to Left Hand Side of Door.

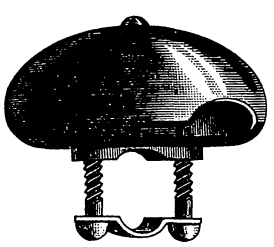
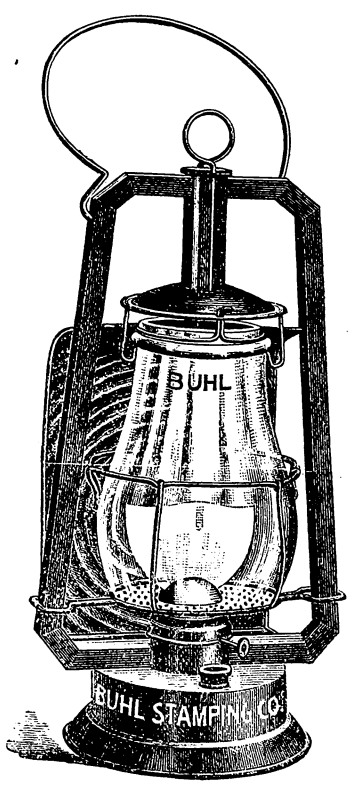
The '94 Winton.



In addition to their double frame machine, the Winton Bicycle Company, Cleveland, Ohio, will market a line of wheels like the one shown in the accompanying cut. While following the regular Humber lines the wheel has an additional brace to insure special strength with rigidity at the crank hanger, and to permit a reduction of weights without fear of break downs. It has a narrow tread, long head and high frame, being made for the general run of riders, instead of for racing exclusively. The machines have 43-inch wheel base, special bearings, wood rims, tangent spokes, with tires optional. The line includes a 22-pound racer, 25 pound light roadster and a 28 pound full roadster stripped, or 32 pounds all on. It is stated that these machines are of the highest grade throughout.

The '94 Winton.

Bicycle Bell.



Haines & Zimmerman, 407 Cherry street, Philadelphia, are putting on the market the bicycle bell shown in the accompanying cut. The bell is 2 inches in diameter, has a closed base and double stroke, and is designed to fit any standard handle bar in the market. The gong, it is claimed, works easily and possesses a fine tone. The bell is of an unusually small size and is made up in response to the demand for a well made, low priced article.

Bicycle Bell.

Buhl Dash Lantern.

The accompanying cut of a dash lantern represents one of the six pieces contained in the Mascot assortment of the Buhl Stamping Company, Detroit, Mich. These goods are furnished in colored hard enamel finish. It is remarked that the lanterns contain the latest improvements, never leak, give a steady bright light and never go out in the wind. The Brilliant assortment put up by the company contains one dozen square lift tubular lanterns, assorted red, blue, russet and maroon colors. The assortments are referred to as being especially adapted to the wants of small customers and hardware jobbers during such a year of business depression as the present.

Buhl Dash Lantern.

Current Hardware Prices.

DECEMBER 20, 1893.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers' prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers at the figures named.

The character @ is used to indicate a range 'of price; thus discount 50&10@50&10&5 % signifies that the goods in question are sold at prices ranging from discount 50 and 10 % to discount 50 and 10 and 5 %.

THE IRON AGE

THURSDAY, DECEMBER 28, 1893.

The Hodge-Frazier Taper Turning Attachment.

This attachment is designed to be used on any lathe. It can be quickly and easily transferred from one lathe to another and can be attached to a plain gib, raise and fall, or compound rest carriage. The device consists of a dovetailed bar fitted to slide in guides carried by the carriage of the lathe. From one end of this bar projects a connecting rod, which is grooved in several places to receive the binding screw of a clamp fastened to the lathe bed. Pivoted at one end to this bar is the taper bar, the other end of which is graduated so that any desired taper can be obtained by securing the bar at the desired angle in relation to the center line of the lathe. Sliding jaws are fitted to the taper bar and are connected to the cross slide. From the above and by reference to the engraving the construction and operation of the device will be understood. This attachment is placed on the market by the Prentiss Tool & Supply Company of 115 Liberty street, New York.

THE HODGE-FRAZIER TAPER TURNING ATTACHMENT.

A few months ago *The Iron Age* made the statement that No. 27 gauge sheet iron for roofing purposes, which is called No. 27 standard, but really weighs $\frac{94}{100}$ pounds per superficial foot, was sold at $2.65 per 100 pounds, free on board mill. Exception was taken to the statement, although it was proved to be correct. We are now able to state positively that this same material is being sold at $2.50 per 100 pounds, free on board mill.

Cost Keeping.

Notwithstanding its vital importance, the matter of accurately obtaining the cost of a manufactured product in detail, or of individual machines or parts of machines, frequently receives but meager attention. The annual balance, or, may be, deficit, is taken as a measure of the relation between the total cost and the selling price of the aggregate product, but just where money is lost and just where it is made is by no means so definitely known. Doubtless in almost every manufacturing business handling a variety of goods certain classes serve by their large profits to carry along the others, which could not stand by themselves.

Even such cost keeping systems as are in operation in some concerns are often so crude or general in their character as to preclude the possibility of obtaining accurate detailed information. Then, too, methods are sometimes incorrect or misleading. The foundryman who merely knows that the average cost of his completed castings is so much per pound is in no position to compete in prices on close estimates with the man who knows individually the cost of his iron in the ladle, and the average expense for snagging, pickling, rattling, &c., so that he may thereto add his known or carefully estimated cost of molding.

Obviously the same holds to an even greater extent in machine manufacture, where the more detailed the information the more serviceable it becomes in determining where to cut in the cost or upon what figure to decide for a selling price.

The indefinite item of factory or establishment expense, covering fixed changes and to be added to the net cost of the article, frequently leads by its improper application to a distortion of the values. This can be avoided only in so far as the various items of this expense are charged directly to the article made, rather than lumped with others in a general percentage.

Nothing is more evident than that no one system of cost keeping is applicable to all classes of manufacture. The following general scheme appears, however, well fitted to the average establishment making a variety of articles of reasonable size :

In the first place, the hours of labor for which a man is to be paid and the time which he devotes to any given article or process are kept entirely separate. Time under the first heading is kept by any approved check or time clock system, and the pay roll made up therefrom. But the labor upon the specified piece is recorded upon a time slip, giving order number, hours worked, name of piece, character of work performed thereon, and number of tool employed to perform the work. This is signed by the workman, and as soon as the operation is completed passes to the foreman, who duly inspects and countersigns it.

Hosted by Google

At stated intervals, preferably every morning, these slips are collected, together with any orders, sketches, stock memoranda or the like relative to the same completed work. These records are all filed in a single envelope properly inscribed and numbered. There thus accumulates from day to day a complete record of the progress of the work, which may be consulted at any time. When all slips and orders are collected the filled envelope stands as a complete record of all written orders given, of the date of their fulfillment, of the total amount of stock used, and a detailed individual record of all work done.

In a piece work shop, piece work receipts properly signed by the inspector take the place of the time slips, but still continue to show the progress, and when checked up by piece work price-lists also determine the cost. Outside work upon installation, orders to the purchasing agent, corrections of orders and the like all go into the envelope with the rest.

The marked value of this system lies in the facts that no clerical work is required, unless the cost of the given article is to be figured, and that at any time, no matter how distant from the date of completion of the order, the full record may be taken from the files and the detailed cost determined. This is an important feature where goods are built to be sold at standard prices and costs require to be figured only at intervals.

This system in actual operation has shown itself readily adaptable to existing circumstances, elastic to a remarkable degree and free from the peculiar inconvenience of many book systems, where many pages must be scanned to obtain all the time chargeable to a given order.

Statistics of overland passenger traffic by the Southern Pacific for the month of November show clearly how largely the westward migration exceeds that in the other direction. The returns of passengers carried, which are said to present a very fair similarity to the average figures, are as follows:

	Eastward.	Westward.
First class	1,348	4,793
Second class	1,831	6,468
Totals	3,179	11,261

The carrying capacity of vessels lost on the lakes during the past season, says the *Marine Review*, is about 17,000 tons less than that of the new vessels now under contract in the shipyards, and thus for the first time in eight years there is a halt in the great increase in tonnage. In previous years the tonnage of new vessels under contract each fall has been so much in excess of the losses of the previous season as to cause little attention to be given to the latter.

The dullness in the iron and steel trade has now extended to the natural gas fields of Ohio and Indiana. Manufacturers in this district state that during the hard times of this year they have been able to hold their own in competition for the few orders distributed, but they now assert that, notwithstanding free gas and other advantages, they are not disposed to allow the lowest of present prices to be entered on their order books; consequently, most of the mills are only running half time. A few weeks ago, in passing through the same territory, our correspondent noticed everything going full blast.

Basic Bessemer Costs.

(*Concluded from page* 1121, *December* 21.)

Taking up each item singly and examining it in detail, the following results are obtained:

IRON.

Charleroi exceeds American estimate. $0.291
American estimate exceeds Charleroi.. ——

This excess at Charleroi, in spite of the fact that the iron there costs $1.49 per ton less than on sheets II and III, is caused entirely by the high loss, viz., 20 per cent. According to Torduer, Charleroi only produces 80 per cent. of ingots, the balance is total loss, no credit being given for scrap. The figures that I use here both as to the cost of the pig and to the loss are perfectly attainable, and in so far as the loss is concerned one at least of the continental plants is doing even better, and I know of no reason why the American practice should not equal and perhaps improve on their results.

COAL.

Charleroi excess..... ——
American excess..... 0.16

The cost price of this item is less on Sheet I than on Sheets II and III. The vital point, however, here lies in the weight used per ton. Comparing the foreign consumption of 363 pounds with Mr. Howe's figures for a fast running acid Bessemer, about 200 pounds per ton, it seems, and I have already so remarked in this paper, as though the weight was too low, and I have used much higher figures for the American estimate. In this connection, however, it must not be forgotten that the method of keeping the accounts enters very largely into this result. Mr. Howe plainly says "steam fuel," but I am not sure whether this means boiler fuel alone or all fuel used in or about the converting mill, such as coal for the small locomotives, the ferromanganese furnace, &c.

Mr. Torduer simply uses the word coal. This certainly can only be taken as including all coal chargeable to the converting mill and this, I think, is also what Mr. Howe means. On sheet II I have placed the consumption at 500 pounds, and on sheet III at 400 pounds per ton of ingots. Both of these plants would be very slow running, as compared with Mr. Howe's swift plant, and I do not believe that Mr. Torduer's figures are attainable unless he uses the triple expansion engines spoken of later in his paper. Such engines are not at present in use in the still works in this country. It is very noticeable how little more coal is required to run fast than to run slow, and how rapidly the cost of this item decreases per ton as the tonnage of output increases. The costs on sheets II and III are for bituminous coal. If these plants were constructed with sufficient boiler capacity to run on small sizes of anthracite coal, these figures could be materially reduced.

WOOD, WASTE, OILS, ETC.; REPAIRS, LABOR, MATERIALS, SHOP ACCOUNT.

These are, perhaps, all considered by Mr. Torduer under the head of sundries, although it is hard to see why the repair account is not considered of enough importance to be entered separately, and it is possible that it has been omitted. Since the sum of these items just equals the amount charged for sundries, it is probable that the better American practice, in this case, at least, makes up for the great difference in the cost of the labor.

COKE.

Practically the whole of this item may be charged to the use of the indirect process—cupola melting—and would form a portion of the saving to be effected by running direct. The bulk of the coke used by Charleroi must be charged against the dolomite, since this item is treated as raw stone and no spiegeleisen is used.

Considering, therefore, that all of it is used for burning the dolomite, the total cost—less labor, it being included in the conversion labor—is only 20 cents against 0.45 cents on sheet II and III. This is one of the most striking differences between the plants, but in considering it the marked difference in the cost of labor between the two countries must be borne in mind.

It really seems as though Mr. Torduer was wrong as regards the cost of dolomite per ton, since the text, I think, fully sustains my assumption that he is talking about raw stone; and if that is so, since this stone, quoted at $1 per ton, loses at least 50 per cent. during calcination, the cost per ton of ingots could not be less than twelve cents. This question was touched upon when discussing the comparative costs of the lime and dolomite, but no mention was then made of this particular error. The fuel and labor for burning are charged on the cost sheet, but no allowance is made for the loss during calcination. This adds to the evidence against the correctness of the figures for these items.

CALCITE.

Used as a flux on the cupola and is, therefore, directly chargeable to the Indirect Process.

LIME.

Charleroi excess..... ——
American excess..... .245

Eighteen and nineteen per cent. is the amount used at Charleroi. An average of not over 16 per cent. is the more usual practice, and the results obtained are undoubtedly as good, if not better, than at Charleroi. Note the difference in the first cost—$1.60 as compared to $4—just two and one-half times as expensive in the States as on the Continent. If this same comparison held good in each case—viz., that two and a half times the European cost equaled the American cost, no further inquiry into this great difference in the cost of conversion would be necessary. While it will not hold strictly to this proportion, still there is a constant difference caused by that great underlying fact, low wages in Europe, high wages in America, that cannot be overcome completely by any existing better plants, better processes or smarter workmen that we Americans are supposed to possess.

TAR.

Charleroi excess..... ——
American excess..... 0.156

The cost price here is about one-third greater.

FIRE BRICK, FIRE CLAY, KAOLIN, GANNISTER OR ACID REFRACTORIES.

Charleroi excess..... 0.113
American excess..... ——

It is possible that the vessel nose at Charleroi is lined with acid materials, but I would not propose so doing in the plants estimated on here and also that such acid materials as are required on the dolomite cupola are charged into

Hosted by Google

this item, such not being the case on sheets II and III, where the basic refractories are charged on the conversion cost sheet at their cost of manufacture, and this naturally includes the labor of their production, acid refractories, &c.

CUPOLA TUYERES AND BLOCKS.

This lining material for the cupolas is of coruse directly chargeable to indirect process.

MOLDS AND STOOLS.

Charleroi excess..... ——
American excess..... 0.01

There is but a slight difference here between the two countries and it certainly shows better work since the American practice, in spite of the higher first cost of the molds, approaches so near the continental figure per ton of ingots. A varied output requiring many different and odd shapes of molds would increase this cost.

SLEEVES, NOZZLES AND STOPPERS.

Charleroi excess..... 0.031
American excess..... ——

These three items are evidently taken under the one head of stoppers by Mr. Torduer. It will be noticed in this case, as in the fire brick item, that the Belgian cost exceeds the American. From the general tendency of all the other factors, or as one might say, from the internal evidence, we are warranted in assuming that the cost price of all these acid refractories is much less than in the United States. If, then, the cost per ton of ingots is still less with us, it must be because we use very much less of these materials and our practice is therefore more perfect in this particular.

SHIFTING.

Charleroi excess..... 0.018
American excess..... ——

I have previously criticised the wage list of this paper because it did not contain engineers and trainmen enough, according to my idea, to handle the intermediate products of the mill.

Under this particular heading I should include only the work of handling raw stock and finished material, the receiving from and delivery to the railroad companies of the loaded and empty cars, and the necessary handling of these cars over the mill tracks. As this figure exceeds the American practice so greatly it is easily possible that by a different method of keeping the accounts Charleroi charges to this item some of the men that I have accused Mr. Torduer of omitting.

INSURANCE AND TAXES, STATIONARY STEEL INCIDENTALS, LABORATORY CAR ACCOUNT

Charleroi excess..... 0.036
American excess..... ——

Can all be grouped together and charged against the general expense account.

SALARIES.

Charleroi excess..... ——
American excess..... 0.040

This item is entirely omitted, I believe, by Torduer, at least I can find no evidence of its being included under any other head, and as it is, though not large, still an ever present factor, I am inclined to think that there may be other items that I have in the first place put in the "omitted" list, but later on endeavored to include under some other title in this balance sheet, that he has in reality disregarded and which, though small in themselves, would in the aggregate amount to a very considerable sum.

LABOR.

Charleroi excess..... ——
American excess..... 1.082

Referring again to the one or two apparent errors in Mr. Torduer's labor list, and supposing that as many men as were thought necessary were added to that list, if all the items that he has, perhaps, omitted were also inserted, the total cost could not be increased over 50 cents per ton.

It is not here that the great difference in the cost of conversion lies, but in the labor rates.

In the report of the United States Commissioner of Labor for 1890 on the cost of production of steel ingots, p. 342 et seq., the following average daily earnings per man are given:

American establishment—

No. 1.	No. 2.	No. 5.	No. 7.
2.03½	2.35	1.78½	3.02½

an average of $2.29.

Comparing this with the average daily rate of $0.68 paid the Belgian worker, it is not hard to understand why the American labor exceeds that at Charleroi by $1.08 per ton of ingots, nor why in so many other cases where the quantities of materials used are nearly alike, the American cost is so much greater than Belgian.

FERROMANGANESE AND SPIEGELEISEN.

Charleroi excess..... 0.404
American excess..... 0.540

In the first of these items it is presumed that almost double the quantity required abroad will be necessary here. This not because of any error or bad practice at either plant, but on account of the quality of the steel to be made. The American builder, be it of bridges, boats or boilers, does not want and the specifications that he furnishes will not permit of the use of such soft steel as is almost universally used on the Continent. The soft steel, "Flusseisen" of the German steel maker, is true to its name. It is much nearer in its physical qualities to iron than anything made by a so-called steel process in this country. Superior to wrought iron on account of possessing a slightly higher ultimate strength in connection with a greater reduction of area and elongation, it surpasses much of what we Americans call "soft steel" and which would be the class of material furnished by the plant under discussion, in so much as among its other advantages while passing through any subsequent stages of its manufacture, no amount of ill treatment (except burning, and this is extremely difficult to do) can spoil it. Punch it, drift it, ream it if you like, and it will be still the same ductile mass that it was when you commenced. Heat it, chill it, try to harden it, to temper it and its physical characteristics will remain unaltered or, if changed at all, be somewhat softer. This, however, is not the sort of steel that there is a demand for to-day and consequently the American plant would have to stand the extra expense of adding the recarburizer as shown here. As to the spiegeleisen, a portion at least of that undoubtedly could be done away with by the use of fine coke.

Now let us suppose that the pig iron cost $10.51, as at Charleroi, instead of $12, and that the loss was the same as on sheets II and III. In this calculation only the price of the pig iron has been changed, the steel scrap and burnt or cast iron scrap have been left as on the American estimates:

Sheet II—
$7.818 − ($1.809 − $1.729) = $7.738.
Sheet III—
$6.944 − ($1.809 − $1.729) = $6.864.

If now the wages he considered on the comparison of the Belgium daily average of $0.68, as against the American daily average of $2.29, then the cost per ton on sheet II would be $0.476, or a reduction of $1.124, and on sheet III $0.446, or a reduction of $1.054 per ton, hence

Sheet II—
$7.738 − $1.124 = $6.614.
Sheet III—
$6.864 − $1.054 = $5.810.

Now, for the sake of this comparison we will suppose that the American plant makes steel of the same degree of hardness as the Continental Flusseisen. The recarburizer account would be reduced to 35 cents.

Sheet II—
($0.704 + $0.540) − $0.35 = $0.894, and $6.614 − $0.894 = $5.72.
Sheet III—
($0.704 + $0.540) − $0.35 = $0.894, and $5.810 − $0.894 = $4.916.

This shows a cost of conversion for sheet II of $5.72, compared with the Charleroi rate of $4.64, giving an excess of $1.08, and for sheet III $4.916, an excess of $0.276.

This excess remaining against the American single turn plant, $1.08, can hardly be compared intelligently against the Charleroi costs, since the conditions are still very different, but we may well ask why the double turn plant should not show a cheaper cost instead of being $0.276 higher, since we have as nearly as possible made the conditions of it and Charleroi similar, and in the one case of a greater production given it a decided advantage.

By recapitulating the differences we may possibly find where this variation lies:

		Charleroi exceeds American estimate.	American estimate exceeds Charleroi.
Iron		$0.291	.....
Coal		.....	$0.16
Wood, oils, waste, &c.	Sundries	.....	.....
Repairs.			
Coke		.....	.....
Lime		.....	0.245
Tar		.....	0.156
Fire brick, Fire clay, Kaolin and gannister	Fire brick, sand, &c.	0.113	.. ..
Molds and stools		.....	0.010
Sleeves, Nozzles, Stoppers.	Stoppers	0.031	.....
Shifting		. ..	.....
Insurance and taxes, Stationary incidentals, Laboratory car account	General expenses.	0.036	.....
Salaries		.....	.....
Labor		.....	1.082
Ferromanganese		.....	.....
Spiegeleisen		.....	.....

I have purposely omitted from this recapitulation the variations on doubtful items, such as coke, shifting and salaries, also the ferromanganese and spiegeleisen, since it is solely a change in practice, caused by the demands of the trade that makes the difference on these latter items.

Glancing over the column headed "Charleroi exceeds," the increased cost of the iron, in spite of its cheaper initial price, is first noticed. This increase is brought about mainly by the more wasteful and slovenly practice credited to Charleroi by M. Torduer, and also by his method of calculation.

Hosted by Google

If the American plant were furnished with iron at a like figure, there is no reason to suppose that the loss would be increased; and, as already shown, the cost of the loss (iron) would be further reduced and the total cost of ingots would be only $15.87, as against the $17.44 now shown on Sheet III. The excess in the two items—fire brick, &c., sleeves, &c.—can, I believe, be directly credited to the better American practice, while the difference in the fourth and last one is mainly chargeable to the increased product given on the estimated sheet to the American plant.

Taking the next column, the extra cost of the coal to the American works is almost entirely the result of the larger amount that I have assumed would be used, and as I have endeavored to throw some doubt on Mr. Torduer's figures for this item it may, perhaps, be permissible to leave it out of the discussion. If it is considered, however, we must be forced then to admit that our practice is not equal to the European in this particular.

As regards the lime, it is the high initial cost which alone causes the great difference, especially as I have calculated on the American plant using a less percentage than Charleroi does. The price used on Sheet III is somewhat less than the current market price. It is supposed, though, that the plant will have its own lime kilns, and this figure will then be easily attainable. If the lime could be had at the continental price given by Mr. Torduer the American plant would again show a saving.

The first cost of the tar is higher here than in Belgium, and this, together with the increased amount that I have estimated on—for I am afraid of Mr. Torduer's figures—accounts for the excess.

The difference in the molds and stools is too slight to discuss.

The great excess in the labor cost is the most striking figure in the whole column, and is in reality the key of the situation. It has previously been shown that this is brought about directly by the enormous difference in the labor rates—*vide* quotation from report of United States Commissioner of Labor—and the fact is also plainly patent by the most cursory comparison of Mr. Torduer's wage list with that of any steel works in this country. This fact—the low labor rates—would also affect the price of every article on the list, and in the case of the other great difference in this column, to wit: the lime costs, a marked effect would be shown there, since 50 per cent. of the cost of the burning and about 60 per cent. of the cost of the raw stone represent the labor expended.

From the result of the analysis of these figures it seems as if the American practice could fully equal the work cited by Mr. Torduer. If then we paid wages correspondingly low, our finished work—for it seems useless to dispute, in the light of what has already been shown, his statement that with ingots at less than $15 beams could be made for not over $18—would cost not more and probably less than the figures he quotes.

It must not be forgotten when looking longingly at these low cost figures who the sufferer would be were any attempt made to reach them or if our policy of government should ever force us to meet them. In every case, and view it in any position that you like, it is always the labor—that is, the laborer, the working man—who must bear practically the whole of this reduction. It can be plainly seen that in the figures used in this article no attention has been paid to the profits of the owner or manufacturer, and in any attempt to meet the Belgian price in the open market the difference would have to be taken from some of the costs enumerated herein.

Practical Application of the Pyrometer.

The growing necessity of uniformity in the quality of iron or steel products has caused a closer study of scientific phases when metal of specified ductility is required. Old methods of judging by the eye are fast becoming obsolete, and with the increasing use of the pyrometer to ascertain and regulate temperatures of furnaces, the old secrets of managers and others, who have passed them from one generation to another, do not possess their former value.

The pyrometer is by no means a modern instrument, but its utility and value are being daily demonstrated. In annealing malleable castings, sheets of iron and steel and other iron and steel products it is required that a certain temperature be maintained in the furnaces for a given number of hours to produce a desired result. To accomplish this it has hitherto been the custom to train men in charge of furnaces so that they could make a tolerably accurate guess regarding the temperature by withdrawing a stopper and peeping into the furnace. This was a method full of uncertainties, and to make results more positive the pyrometer is now fast coming into general use.

For the benefit of those not having an available table at their command we print below the temperatures of iron, steel and other metals under various conditions according to the very latest scientific investigation:

Temperatures.

		Fahrenheit Degrees.
Bright iron becomes	yellow	435
	red	500
	indigo	550
	gray	750
Tin melts		445
Mercury boils		660
Lead melts		612
Zinc melts		775
Silver melts		1,775
Copper melts		1,885
Gold melts		1,900
Iron bar, red in	a dark room	950
	ordinary office	1,075
	daylight, open air	1,450
Cast iron melts	white	2,075
	gray	2,230
Annealing	malleable castings	1,600 to 1,750
	sheet iron, No. 20 and lighter	1,600 to 1,700
	sheet iron, Nos. 18 to 10	1,750 to 1,800
Annealing glassware		800 to 1,000

	Centigrade. Degrees.	Fahrenheit. Degrees.
Bessemer Process:		
Running the slag	1,580	2,876
Running steel into ladle	1,640	2,984
Running steel into mold	1,580	2,876
Annealing furnace, ingot in	1,200	2,192
Ingot under hammer	1,080	1,976
Siemens-Martin Process:		
Gas from producers	720	1,328
Gas entering generator	400	752
Gas leaving generator	1,200	2,192
Air leaving generator	1,000	1,832
Fumes passing to shaft	300	572
End of fusion of charge, open hearth	1,420	2,588
Refining the steel	1,500	2,732
Running into ladle, first	1,580	2,876
Running into ladle, last	1,490	2,714
Glass furnace, between the pots	1,375	2,507
In the pots, refining	1,310	2,390
In the pots, working	1,045	1,913
Siemens, melted for casting	1,310	2,390
Blast Furnace, Gray Bessemer:		
Front of tuyere	1,930	3,506
At tapping	1,570	2,858

By preserving this table and carefully using a pyrometer those in charge of furnaces will avoid mistakes which are often very costly. It is frequently the case when new men are put to work at a furnace that they are entirely too energetic. The furnace is kept too hot and the material spoiled, annealing boxes are burned and general trouble results. On the other hand, an old employee, depending too much on his former success, may grow careless and keep the furnace at too low a temperature. The charge is drawn after the furnace is cooled down, the result is not satisfactory and the material has to go through the process a second time at the expense of the manufacturer. By using a pyrometer and enforcing a system of recording temperatures every hour these troubles can be avoided.

The Bureau of Statistics has published for the Ways and Means Committee a tabulation of the imported merchandise entered for consumption in the years 1890 to 1893, with the rates and amounts of duty collected. This tabulation goes into far greater detail than do the monthly or annual reports relating to imports. Among other figures which may be of interest we note the imports of pig iron are separated into three groups, spiegel and ferro, ferrosilicon and all other. It appears that the imports of ferromanganese and spiegeleisen were during the fiscal years as follows: 1890, 108,771 gross tons; 1891, 54,238 tons; 1892, 55,080 tons, and 1893, 49,157 tons. The imports of ferrosilicon were 51 tons in 1892 and 255 tons in 1893. The imports of "all other" pig iron amounted to 39,299 tons in 1890, 27,307 tons in 1891, 28,145 tons in 1892, and 13,232 tons in 1893. The imports of scrap were:

Imports of Scrap.

	Iron.	Steel.
1890	35,357	2,443
1891	47,730	7,442
1892	29,236	7 551
1893	14,331	5,831

As showing the magnitude of the Swedish business we copy the following table:

Imports of Charcoal Bars, Billets and Shapes.

	Tons.	Value.
1890	26,921	$1,072,912
1891	17,910	760,439
1892	18,401	732,259
1893	15,710	603,243

The imports of beams and structural shapes were as follows:

Imports of Beams and Structural Shapes.

	Pounds
1890	4,848,613
1891	6,954,943
1892	18,235,277
1893	11,241,473

Under the general classification of wheels, or parts thereof, and steel tired wheels and tires we found the following figures, which, of course, deal almost exclusively with tires:

Imports of Tires.

Fiscal years.	Pounds.	Value.
1890	3,247,580	$265,678
18 1	5,821,892	194,089
1892	8,575,915	264,494
1893	15,361,011	458,700

It will be observed that there has been a considerable increase during the fiscal year 1893.

Recently two ships have arrived in New York from Japan, carrying, respectively, 900 and 600 tons of manganese ore. It is stated that the latter lot was purchased by a large Pittsburgh concern.

Universal Die and Roll Grinding Machine.

This machine—built by the Waterbury Farrel Foundry & Machine Company of Waterbury, Conn.—is designed especially for outside and inside grinding, where the work can be carried on the face plate or in the chuck.

Its novel features are that in changing from cylinder to face grinding the grinding wheel does not have to be run at right angles to the countershaft, but at all times and for all work rotates in about the same plane as the overhead drum on countershaft, and this permits the application of an automatically reversing, traversing mechanism to the wheel carrying side.

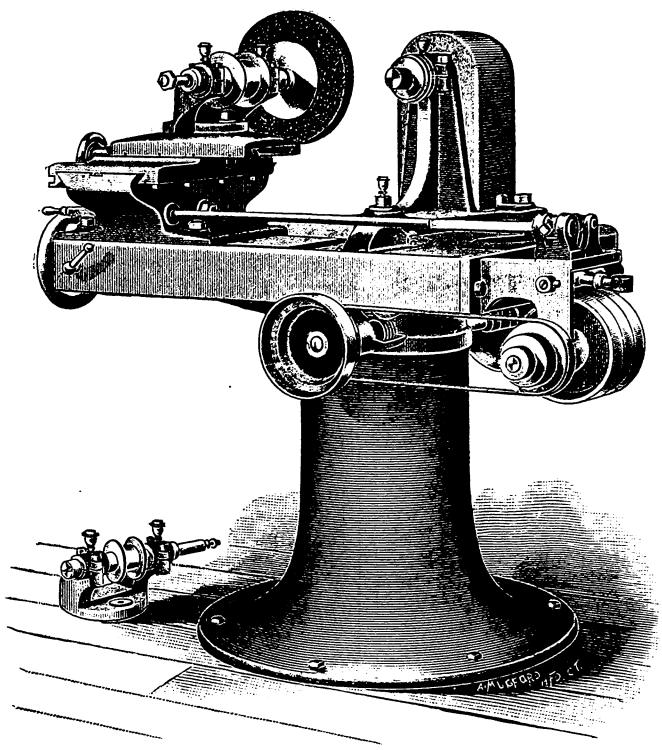

Fig. 1.—Perspective.

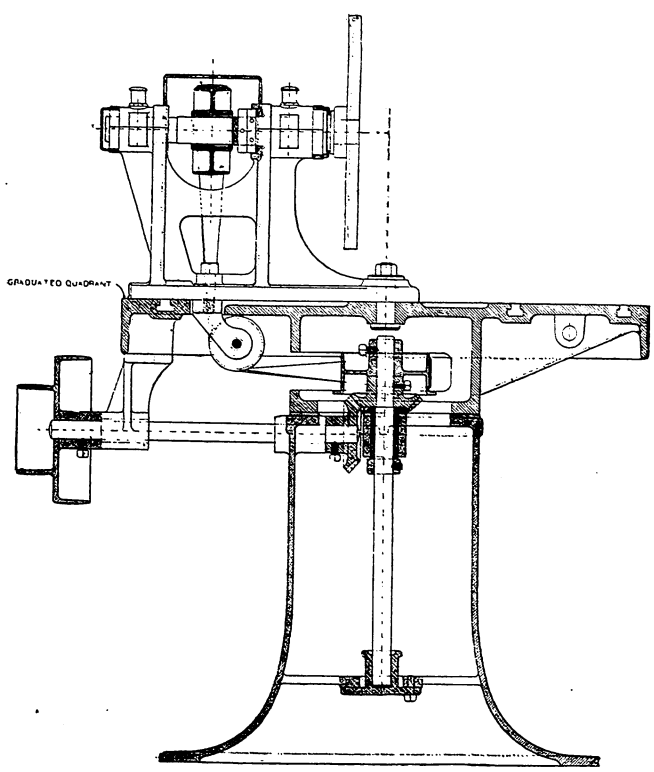

Fig. 2.—Vertical Section.

UNIVERSAL DIE AND ROLL GRINDING MACHINE.

The amount of the traverse may be varied up to 10 inches, and to adapt it to varying sizes of work a suitable position may be quickly given to the base of the traverse carriage, within a limit of 6 inches to or from the work. The head carrying the wheel is movable by screw at right angles to the traverse to an extent of about 4 inches, and being swiveled may be further adjusted in angular position for special cases. The automatic traverse may be quickly thrown out by the small lever handle shown at the left, at which time the motion of the carriage may be entirely regulated by the hand wheel in front of machine (at left of cut). The speed of the feed may be varied through the cone belt shown.

The method of turning the work for face grinding is not clearly shown in the illustration, but may be described as follows: The counter drives a pully which is nearly opposite the cone shown in the center of the engraving, and which through miter gears runs a vertical shaft in the column. On the upper end of this shaft is a pulley which, through idlers, drives the pulley on the main spindle of the carrying head, the idlers being so attached that the head may be swiveled at any angle up to 90°, and for exact adjustment the table is accurately graduated to half degrees. This machine is thoroughly well built of suitable materials, and all bearings are protected by dust proof boxes. Two heads are provided, one with strong spindle for carrying large wheel and one for high speed small wheels, as used for inside grinding. The speeds are well proportioned for economical grinding, and with the automatic traverse the machine is desirable for grinding circular dies and triblets for tubes.

The capacity of the machine may be summed up about as follows:

Largest cylinder which can be ground, 12 inches in diameter, 10 inches long. Will grind 16-inch hole in ring to a depth of 4 inches. Will surface a disk 18 inches in diameter.

Duluth News.

At the Mountain Iron Mine, on the Mesaba, an immense amount of work is being done in steam shovel stripping for the shipping season of 1894. Five large and powerful steam shovels are at work day and night, and four standard gauge and six dummy locomotives are employed. Though the temperature has already touched 36° below zero, the only serious inconvenience has been the stiffening up of the machinery. Owing to deep snows there is but about a foot of frost in the ground, and this readily breaks down under the shovels. Frost has made a little trouble on the sides of cuttings exposed for several days to the weather. It has been plainly demonstrated that even in this climate surface work, so far as men and material are concerned, can be successfully carried on in the coldest weather. Trouble with machinery, however, adds much to this winter work. It is hoped to strip about 500,000 yards of surface at this property before spring, there being an average of 20 feet in depth over the ore. As this is the first fair test of winter work in these surface mines, either for work done or price, it is of very considerable importance.

At the Biwabik also about 500,000 yards are being moved, no machinery being used. By January 500 men will be at work. The conditions here are so different from those at the above mine that one is no guide to the other.

The Oliver is so arranged that no winter work need be done. These three are at present all the "steam shovel mines" on the Mesaba, though the remarks of Chairman Wilson of the Tariff

Hosted by Google

Committee would lead one to suppose there was nothing but this class of mines in the range. Surely at such a mine as the Biwabik, where 500 men are at work, the question of "natural labor" would appear to be "relevant."

Contractors and engineers are examining the Minnesota Iron Company's new Mesaba purchase, the Iron King, where over 300,000 yards of stripping are to be moved at once. The Norman, another Minnesota Iron Company purchase, is also to be stripped in a moderate way. During the past week the Minnesota have added another to their list of Mesaba properties by securing 240 acres near the McKinley on payment of $50,000 and agreeing to a 30-cent per ton lease. The Minnesota are now second only to the Consolidated in their Mesaba holdings.

The Franklin, probably the best underground mine in the new range so far, and the Diamond, both closed last week. They discharged 400 men.

On the Vermillion range range the Minnesota is hoisting 2000 tons and the Chandler about 1500 daily. This company's Canton mine, Mesaba, in 11 consecutive days mined and hoisted 6000 tons, working 135 men all told.

At the Gogebic range towns of Ironwood, Hurley, Bessemer and Wakefield there are respectively 3200, 2100, 750 and 600 persons who are absolutely dependent upon charity, and will continue so to be till work is given them. Two mines at Ironwood have started up in the week, and several more may do so; all, however, in a very small way.

At New Philadelphia, Ohio, there is considerable activity during these otherwise dull times. The New Philadelphia Wire Nail Company are running double turn, employing about 150 hands, and are turning out an average of 1100 kegs per day. The New Philadelphia Iron & Steel Company are operating their sheet mills about half time, the orders being for roofing sheets and galvanizing stock. The Spicer Mfg. Company of the same place are pushing their line of rolling mill machinery and labor saving appliances and are kept fairly busy. At Canal Dover, three miles north, in the Tuscarawas Valley, the Reeves Iron Company are operating their bar mills and sheet mills to about two-thirds their capacity. Large orders for car roofing sheets recently entered by the last named company will probably furnish the nucleus of steady work for months to come. The blast furnace of the Penn Iron & Coal Company, Canal Dover, stands as a silent monument of dull times, and there appears to be no prospect of immediate resumption. Ripple & King are running their foundry and machine shop little more than half time, and other industries are quiet. At Cambridge, Ohio, 40 miles south, the Cambridge Iron & Steel Company are operating three out of four sheet mills and two galvanizing pots. The Cambridge Roofing Company and the Cambridge Corrugating Company are not working more than half time. The various roofing concerns at Canton are all working a small force of men part time.

The garbage disposal question has been settled in Chicago by the signing of a contract with a garbage reduction company, who will at once erect five crematories, each of 100 tons daily capacity, at a cost to the city of $25,000 for every crematory built.

The Western Foundrymen's Association.

The regular monthly meeting of the Western Foundrymen's Association was held at Chicago on Wednesday evening, December 20, 1893, President Sargent in the chair. The following amendment to Article 8 of the by laws was presented and adopted:

"ARTICLE VIII. — All proposals for membership shall be made in open meeting by any member. The application, with the indorsement of the member making the proposition, shall be voted upon by the members present, a majority electing."

The secretary read a paper entitled

Furnace vs. Foundry Practice

by E. A. Wheeler, Sharon, Pa.

Pig iron contains about 94 per cent. of pure iron; the other 6 per cent. is chiefly composed of carbon, silicon, manganese, phosphorus and sulphur, and upon the proportion of these elements depends the quality of the iron. Through the aid of chemistry we have learned in what proportion these ingredients should be contained in the pig iron in order to make the best iron, steel or castings. Carbon and silicon are indispensable elements, but phosphorus and sulphur are rank poison, and should be eliminated as much as possible. The furnace operator knows how hard it is to make iron containing the right proportion of carbon and silicon. Although the ores, coke and limestone are carefully weighed into the furnace, the hot blast is held at the same temperature and all the conditions are the same as near as possible, yet we seldom get two casts alike, as the following report of one day's work of six casts at our furnace will show:

	Silicon.	Sulphur.
First cast	2.28	0.013
Second cast	2.43	0.009
Third cast	2.40	0.010
Fourth cast	2.00	0.020
Fifth cast	1.94	0.035
Sixth cast	2.04	0.024

You will see from the above analyses the constant change that is going on in the furnace, and, although the iron was No. 1 in grade, and no difference could be noticed in the fracture, yet it would work very different in foundry castings. This explains why furnacemen sometimes get letters from their customers which read about as follows:

"The last car of iron you sent us is not good; can't use it; plates crack, and the castings are too hard to work in lathe, and it spoiled our last heat."

Now, a little knowledge of chemistry would have saved all this trouble. The last car was too high in carbon and too low in silicon. Had the foundryman said in his order, "Ship me one car of iron, same as last, silicon 2 or 3 per cent.," as the case may be, he would have had the same castings as before, with the same mixture, and no uncertainty about it. Or had he known that the iron was low in silicon, and added a little high silicon pig iron, he would still have been all right. The fact is that silicon plays so important a part in regulating the carbon in iron that no well regulated foundryman can afford to use iron without knowing how much silicon it contains; and with that knowledge he can always have the kind of iron he wants in his castings. Too much silicon makes iron weak and too little makes the iron hard. Good castings for machine work should contain from 2 to 2½ per cent. of silicon; stove plate, 2½ to 3 per cent. If the foundryman will keep on hand a stock of silvery gray iron running 5 per cent. in silicon and knows what his strong irons run in silicon, as he always should know when he buys his iron, he can easily make a correct mixture in the office and not depend upon his wizard mixture for the quality of his iron. Every foundryman should keep his own chemist, or buy his iron on analysis and demand a chemist's card with each car. If this rule is observed, Nos. 2 and 3 and even gray forge can be used and very much cheapen the stock and make equally good castings. The puddling furnace must go, as soft steel is rapidly taking the place of iron, and then the white and mottled iron will have to be melted over in the blast furnace. Forge irons will have to be used in the foundry, and there will be no trouble in doing so, provided you have the correct analyses of the iron and use the right amount of silicon in each charge in the cupola.

The quality of the iron in the blast furnace is governed by the temperature. If the furnace is hot the silicon runs up and the sulphur down; if the furnace is cold the silicon runs down and the sulphur takes its place and we get No. 3, or may be white and mottled iron. I would think a hot or cold cupola would have the same effect on the iron. If the cupola is hot the iron will take up carbon and silicon from the coke and the castings will be soft and good; but if the cupola is cold the iron will take up sulphur and the castings will be hard and poor.

There are so many contingencies connected with the operation of the cupola that it is hardly safe to make any suggestions without knowing all the conditions. The first question is the quality of the coke. If the coke is poor and full of sulphur you cannot get good castings. A great deal depends upon the blast, whether soft or strong. My impression is that most foundrymen use too strong a blast and melt the iron at too high a zone. A soft blast will take a little longer to take off a heat, but there will be great economy in coke and less oxidizing and a better quality of iron when melted. It is very important to use the right percentage of lime for flux, as it purifies the iron and covers it with slag and keeps it hot and prevents oxidizing. Forty years ago the writer was engaged in the foundry business making stoves, and although all other branches of the iron and steel business have been revolutionized, the foundry business seems to plod along in the same old rut, and is governed by the rule of cut and try, and I cannot see that there has been any improvement. Iron is still sold by the fracture and graded Nos. 1, 2 and 3, and silvery gray for a softener.

The foundryman should know how much silicon and sulphur each number contains. I notice your association is talking of one chemist to do the work for all the foundries. That plan will not work, as most of the foundries do not order iron until they want to use it, and often say in the order to ship quick and send tracer to hurry it along. How could they wait to send drillings, perhaps hundreds of miles, and then wait their turn for the analyses? That is too slow even for the average foundryman. All pig iron for making steel, either Bessemer or open hearth, is sold on analysis, and why should not foundries adopt the same rule? For years we have analyzed every cast at our furnace for silicon and sulphur, and once a day

Hosted by Google

for phosphorus. Each cast is piled by itself and the date and number of the cast is marked thereon, and by referring to our chemist's book we know just what it is and would be glad to send any one buying iron the correct analysis with each car we ship. A prominent steel man once said to the writer: "I don't care what your iron is made of so it has the correct analysis. I don't care if you make it from all mill cinder." He knew very well that the analysis would not be correct if made from cinder, and so with the foundry; you can depend upon the iron if the analysis is correct.

The writer, when in England a few years ago, was shown through a large foundry and saw an attachment to an ordinary cupola, which seemed to be a good arrangement, and was new to him. It consisted of a square brick bosh inclosed in cast plates to bind it, with an arch roof over the top and high enough to take in the tap hole or trough from the cupola, and was large enough to hold the entire heat that was wanted. The bosh had a hole through the arch tap near the front and a gas flue about 8 inches in diameter leading from into the cupola, say half way up the side, to carry off the gases. The operation was as follows: When the cupola was fitted up the bottom was so arranged that the iron and slag as it melted all ran to the tap hole, and as it was left open and quite large, of course it went into the bosh, which had been well dried out and heated up before the blast was put on, and the blast would pour a large stream of burning gas into the bosh with the iron and slag and keep the iron hot. The practice was to melt the entire heat before commencing to tap out of the bosh for use. I was told by the foreman that this was a great improvement over the old way. First, the iron was homogeneous and the quality was improved, and as the iron was covered with slag it would keep hot enough for use for at least two hours, and then when you commence casting there was no delay waiting for iron, as the melting was all done before the molders quit work. There was one cramp in the arch top such as is used on the neck of a puddling furnace that could be lifted off to get in to repair or start a fire to dry out and heat it up. The whole thing was so simple and inexpensive that I think any one could build such an attachment to his cupola from the description I have given, and if I were in the foundry business I should certainly try it. I inquired of the foreman if such an arrangement were common, and he said not; that it was a trade secret, and other foundrymen were not allowed to go through their works.

It is a well known fact that every time you melt iron in a cupola you deteriorate its grade and you have to use new high silicon iron when melting again to replace the silicon burned out in melting. In a blast furnace it is just the reverse. We can take white and mottled iron or old burned hot blast pipes and grate bars and melt them over and the whole thing will come out good gray iron if the furnace is working well, and it melts well and seems to improve the working of the furnace. If fed in the furnace at the rate of 5 or 10 per cent. of the stock used it will not require any more fuel than if it was not used. I do not see why a cupola could not be constructed, something after the lines of a blast furnace, that would convert old hard scrap into good, soft, merchantable iron. The cupola would have to be, perhaps, 15 feet high, and have a closed top so as to conduct the waste gases down into a small hot blast, and if the blast can be heated up to 900° it will do the work. A little lean ore high in silicon might be requred with the lime to make sufficient slag. I think it would pay some firm who have plenty of means to experiment in this line.

Supplemental Hints for Foundrymen.

Always melt your iron hot and draw it off about as fast as melted and cool in ladle, otherwise you burn out the silicon. Do not try to save coke at the expense of the quality of your iron.

Always get the correct analyses for silicon with each car of iron you buy. Get the card of the chemist who made the analysis, with his signature, to be sure that the analysis is correct.

Silicon governs the quality of the iron in all cases, unless the iron contains over 1 per cent. of manganese. Manganese makes the iron hard.

The price of all foundry iron should be governed by the per cent. of silicon that it contains. The higher the silicon the more valuable the iron, because the more scrap it will carry.

Foundrymen often pay very high prices for strong pig. If they will take the common scrap about their foundries nd mix enough high silicon pig with it to make the castings contain 1¼ to 1½ per cent. silicon, they will find that they have a very strong casting.

Stove plate should contain 2½ to 3 per cent. of silicon.

Machine castings, to work soft, should contain 1½ to 2 per cent. of silicon.

Machine castings hard and strong to stand wear and friction should contain 1¼ to 1½ per cent. of silicon.

Castings containing 1 per cent. of silicon or under work hard and flinty under the tool, and are only fit for plow castings or chilling purposes.

Add one-fourth of 1 per cent. more silicon in your mixture than you want in the castings for loss in melting.

If your iron is too high in combined carbon, and too hard, add more silicon.

If your iron is very gray and soft, and high in graphitic carbon, and runs sluggish, add silicon.

If your iron is too soft and weak for your purpose, reduce the silicon.

W. D. Sargent: How about the next to the last hint? It seems to me that it contradicts the one preceding it. He prescribes the same remedy for exactly opposite conditions.

Mr. Hollis: I do not think I agree entirely with Mr. Wheeler in the amount of silicon which he prescribes for the different kinds of working.

Mr. Sargent: There is the question of obtaining the analyses. Is it very difficult to obtain the analyses signed by a chemist?

Mr. Sargent: I think most furnaces have each cast analyzed. It is easily done. The Illinois Steel Company grade every car in that way. I think a great many furnaces do it.

Mr. Sercomb: I think every furnace company will furnish an analysis.

Mr. Hollis: I think the value of such grading depends upon the furnace piling each cast separately at a time. Unless it is done in that way the analyses would be of little value.

Mr. Sargent: What will be the variation between the grades of iron as to the silicon?

Mr. Hollis: Sometimes there will not be any. The grade of the iron in a general way shows the silicon contained.

Mr. Sargent: It would not then be possible to follow out Mr. Wheeler's idea and grade iron by the silicon?

Mr. Hollis: The grade of the iron does not mean necessarily the silicon contained.

Mr. Moore: The steel furnaces grade their iron according to analysis rather than fracture. It has been my experience that we have had No. 3 iron show higher silicon than some iron that we would grade No. 2. It seems to me in looking over the paper that the author places a little undue stress upon the silicon and ignores somewhat the sulphur, which is certainly as important a factor in the fracture and also in affecting the working in the iron in melting, and afterward the character of it right through.

Mr. Hollis: In regard to the point that the last gentleman raised, that No. 3 iron sometimes gets higher silicon than No. 2, I would say that the physical conditions in which it is cast would largely affect the grade. Anything that would chill the iron quickly in the pig bed would lower the grade. That would account for No. 3 iron having higher silicon than the higher grade.

Mr. Moore: Is it not a fact that taking two grades of iron, say 2 and 3, the difference in fracture is due to either one of these two causes—the physical conditions at the time of the cast or the presence of sulphur?

Mr. Hollis: I think not. I think the sulphur by itself could not account for that difference in the fracture of the iron, but the high sulphur almost invariably accompanies a cold working in the furnace, and such conditions give a low silicon iron, and a closer fracture, closer grain.

Mr. Sercomb: Is it not a fact that in the last year and a half, since there has been an endeavor to sell iron on analysis, it has been somewhat of a failure? The foundries may purchase the iron with a guarantee that there is a certain amount of silicon. You are depending upon some chemist who may make a mistake, and the different conditions of the cupola would cause the different fractures in the different irons, as regards softness or hardness, and you make the complaint to the furnace that the iron is not as it should be, and there is no redress. I believe the foundryman will have to make a study of these analyses and experiment quite a little before he becomes thoroughly versed in the matter. If in the different casts there is such a great variation there would have to be a large number of pigs drilled to get the exact analyses; then it does not seem much work saved, for to-day when you want to buy pigs they will break every one for you.

Mr. Hollis: I think it is common with most blast furnaces to take a sample out of the first third and then another out of the second third, and so on, and then use this as a sample for the cast, which in almost every case would fairly represent the cast.

The President: Do you think it advisable to purchase iron by the percentage, having it guaranteed, rather than by the number?

Mr. Hollis: I think most decidedly so. A sample of cast or pig iron can be taken while running out of the pig beds.

Mr. Sercomb: How would you account for iron that you had used for a year and a half with perfect satisfaction in every respect, so that you would adopt it, and then you would make a purchase of 500 tons that was in such a condition that you were not able to use

Hosted by Google

it at all? It was the same iron as far as I was able to see, yet the iron ran to that degree of hardness that it had to be rejected.

Mr. Moore: I presume that most of the foundrymen have had somewhat the same experience. The old reliable casts fail us at times. We had an experience with hard iron during the past year that was quite an expensive one, and we got in quite deep before we knew it. The question was, where was the trouble. It was in several grades of iron and we started at once to ferret the thing out. We started to analyze our iron. We had been getting in some new iron. We could find no trouble in the iron. We then took up the coke, which we thought was all right. We found the coke to be running from 1per cent. to 1¼ in sulphur, and that was "the nigger in the wood pile."

Mr. Sercomb: I would say that we changed our coke and then went back to the same coke again. We found that we would have to change our iron. We then tried Ashland iron and then went right for a while, but pretty soon that became as hard as flint and we had to reject that.

Mr. Moore: I have understood that that condition in the casting is liable to be produced by a high manganese. I would like to hear an expression of opinion.

Mr. Sercomb: I have talked with many foundrymen and no one could give me an explanation of the trouble.

Mr. Sargent: We have used manganese iron and never had any trouble.

Mr. Moore: How high?

Mr. Sargent: As high as 3 or 4 per cent.

Mr. Sargent: I would like to ask if any one can tell what the percentage of silicon to the shrinkage is.

Mr. Hollis: I think you will find that information in a paper by Mr. Keep in the "Transactions" of the Mining Engineers. It is not in direct ratio, as I would call it, up to a certain point. I do not recall the percentage enough to tell it.

Mr. Sercomb: In the matter of analyses has it not been somewhat of a failure?

Mr. Hollis: I think not when analyses are properly applied. The way in which the majority of foundrymen have used them they have been worse than useless. The trouble has principally been that no attention whatever has been paid to sampling. For instance, a foundryman will have some trouble and go out to his stock yard and take up one piece of iron, it may be an odd pig, and take that for the analysis of the whole, instead of systematically going through his pile and taking a large number of pigs. The same thing is true in the way coke is sometimes analyzed. They will take one piece, which as a rule is far from being an average sample. If they would pay more attention to the sampling I think they would get better results.

Mr. Moore: What do you consider a fair sampling of a car, how many pieces?

Mr. Hollis: I think that would depend largely upon the appearance of the iron. If the fracture indicated a variety, it might be 20 or it might be 25 or more. If it were fairly uniform it would be only five or six, possibly eight or ten, unless you should know that it was a single cast.

Mr. Moore: Most cars are from single cast.

Mr. Sargent: According to Mr. Wheeler it is a very simple thing to follow an analysis and get what you want. If Mr. Wheeler is correct it seems to me that the foundry business is far more simple than we had supposed.

Mr. Hollis: I hardly think that the matter is quite as simple as you say. Given a certain brand of iron in which the phosphorus is fairly uniform, then what Mr. Wheeler says is largely correct. The phosphorus, manganese and silicon being uniform, the ratio of combined carbon, which determines the physical properties of that iron, is largely dependent upon the silicon or accompanies the silicon.

Mr. Sargent: Too much stress has been put upon the value of silicon alone as a regulator of cast iron. I am quite certain that the silicon can be all right; in fact, we have made castings that were hard with the silicon 3½ per cent., which is altogether too high, I think, in proportion. We knew at the same time that our sulphur was running from 0.08 to 0.09 or 0.10. There was no question but that the silicon was high enough.

Mr. Hollis: I think there is no question that when you get beyond a certain point with silicon you begin to harden your iron. When you have 3½ per cent. in your iron, all things being equal, you have a little harder iron perhaps. There is a limit in which it is well to have the silicon.

Mr. Moore: You then consider that sulphur is not an important factor?

Mr. Hollis: The sulphur by itself is not. It is chemical properties that usually accompany high sulphur that are detrimental; high sulphur goes with a cold working furnace, low silicon and white iron.

Mr. Moore: In the case I mentioned the sulphur and silicon were both high and the iron in a normal condition.

Mr. Hollis: I think that is exceptional.

Mr. Moore: The one point in that paper which is of benefit to foundrymen is the endeavoring to do the thing by rule, and that is the loss of silicon in melting. It is a question in which we are all at sea. I am interested to know whether the statement that it is about one fourth of 1 per cent. is to be taken as reliable or not. It would be very interesting to have that statement substantiated. My impression has been that it was considerably larger. I presume that would vary somewhat according to the condition of the cupola.

Mr. Sargent: It is somewhat difficult to figure the loss of silicon while you run through two or three different mixtures.

Mr. Moore: I mean with a standard mixture. Of course it would be a very complicated thing if the mixture was varied during the heat.

Mr. Hollis: I should think Mr. Wheeler meant other things being equal. There is no question but that the loss in silicon is largely dependent upon the working of the cupola.

Mr. Moore: What, in your judgment, would be the conditions that would produce the greatest loss in silicon?

Mr. Hollis: With what kind of mixture? Running average mixture with the 2 per cent. silicon I think cold working, other things being the same.

Mr. Moore: The cupola running cold?

Mr. Hollis: I would answer that question in another way. The hotter the iron the greater the tendency to absorb and keep the silicon.

Mr. Moore: What is the possibility of the iron taking up some silicon in the cupola?

Mr. Hollis: I cannot conceive of such a case. I can conceive of the cupola running hot enough to develop the same. The hotter the furnace the higher the silicon.

Mr. Sargent: I would suggest that it would be a good plan for the members who are getting analyses to make an attempt to determine the loss of silicon. It is the one basis on which proper results can be obtained.

The following resolution was then adopted:

Resolved, That the association offers a vote of thanks to Mr. Wheeler for the excellent paper he has presented.

The meeting then adjourned until the third Wednesday in January.

Notes of a Southern Trip.

Among the Alabama furnaces there are in blast: Three DeBardeleben, at Bessemer, two Ensley, two Sloss, two Pioneer, one Woodward and Etowah, and out of blast two DeBardeleben at Bessemer, two DeBardeleben at Oxmoor, two Ensley, two Sloss, one Woodward, two Alice, Mary Pratt, Williamson, Vanderbilt, Trussville and two Woodstock, at Anniston. The furnace practice in the Birmingham district has been greatly improved of late. The product is much greater and percentage of foundry grades is much larger.

Mr. DeBardeleben is giving his entire attention to making iron at Bessemer and Ensley and wonderful changes have been made during the past two months. A laboratory has been fitted up at Ensley under the charge of Dr. Philips and daily analyses are made. Iron is now graded by analysis as well as by fracture, and the latest scientific method has been introduced. If the determination for silicon of a cast of iron shows that the fracture does not indicate its proper grade, it is graded according to its analyses.

The increase in production is remarkable. One Ensley furnace has made 212 tons in 24 hours, and the two in operation are now making about 375 tons daily, nearly all foundry iron. One of the furnaces at Bessemer is making over 190 tons daily, and all three are doing better than ever before. They have not had enough No. 3 foundry and gray forge, and have been trying to make those grades at one of the furnaces, but the output continues largely Nos. 1 and 2 foundry. The iron is graded very high, is strong and soft and should be capable of use in almost any mixture where strength and softness are required.

The Sloss Company have one furnace blowing at Birmingham and one at North Birmingham. They have sold 17 000 tons gray forge in the last two and one-half months. Recently they sold 5000 tons to be put on leased land and held for investments. They say that they will have to take iron from warrant yard for this purpose. If two deals now pending for 5000 tons are made it will sell their gray forge and F F. for two or three months ahead. None of the furnacemen are sanguine about an early improvement and are disposed to sell current output at current prices. They recognize, however, that a decided increase in demand would create a scarcity and they wish deliveries restricted within reasonable limits.

Many American manufacturers are preparing their exhibits for the international exposition that is to open in Antwerp, Belgium, next May.

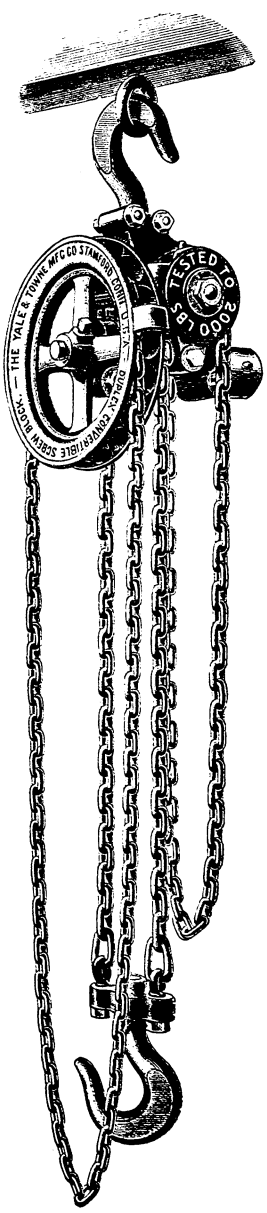
The Kansas City Implement Trade.

An interesting meeting of the Kansas City Implement and Vehicle Association was held in that city on the 18th inst. W. P. Yancy read a paper on "How to Prevent an Accumulation of Old Stock." He advised that the buyer should study crop conditions and market values in the various sections of the territory covered, and that the salesman give special attention to any line of goods that shows a tendency to accumulate. He advised that the jobber never overload a regular customer, and that cutting of prices never be resorted to in order to get rid of goods. He closed by commending to the attention of the club the old adage that "goods well bought are half sold."

M. H. Lohsee read a paper on "Express Rates." He showed the great discrepancy between railroad and express rates and cited the following rates by rail and express respectively between this city and other cities: To New York, railroad $1.35, express $4.50; Pittsburgh, $1.08 and $3.50; Chicago, 75 cents and $2; Omaha, 40 cents and $1.50: Minneapolis, 80 cents and $2.75; New Orleans, $1.25 and $4.50, the average proportion of freight and express rates being 3 to 1 against express rates. Mr. Lohsee said that the State legislatures had not paid much attention to express companies, which had gone unnoticed in comparison with the great railroads. The express companies, though owning no tangible assets, yet declare fancy dividends on fancy stocks. He declared it was time some effort was made to readjust the exorbitant express rates charged.



O. V. Dodge read a paper on the Interstate Commerce law in its relation to the implement trade. He declared that the law was a practical failure and that the railroads, from whom it was intended to protect the people, were the real beneficiaries, being enabled to maintain high rates because the law prohibited any deviation from published tariffs. He declared that railroads preferred national supervision to interference by State legislatures, and that the railroads were always the victors in suits brought for violations of the law. He closed by advocating an effort to secure 5000-mile tickets good over any road at 2 cents per mile.

H. C. Taylor of Lyons, Kan., read a paper showing the effect of the recent ruling of the Kansas Board of Railroad Commissioners reducing the carload rate on implements from this city to Wichita and from Wichita to all points in Kansas from 32½ cents to 23½ cents. The through rate from Chicago to Wichita is 2½ cents less than the sum of the locals. The carload rate on cultivators from Mississippi River points to Wichita makes a difference of $1.60 against the Kansas City jobber on every binder sold; $1.34 on every buggy, or $64 and $53 on each carload respectively. He gave many other figures showing that Wichita is given an immense advantage over Kansas city and is taking away the trade that naturally belongs to the latter.

Mr. Taylor fully explained the Kansas law, which provides that any city can secure reductions in freight rates on the application of the Mayor and council to the commissioners on petition of 25 citizens. If the Mayor and council refuse to make the application on petition of the citizens, the commissioners may take the matter up on petition of the citizens, but cannot do so of their own motion. After considerable discussion the matter was referred to the Legislation Committee. At the conclusion of the programme President Stowe admonished the members to prepare for a discussion of the new tariff bill in its relations to the implement trade with Canada at the next meeting. The present tariff is 35 per cent., which is taken off in the new bill, enabling the Canadians to duplicate implements of his company at greatly decreased prices, owing to the cheap labor employed.

Duplex Convertible Screw Block.

The accompanying illustration shows the latest addition to the line of chain blocks made by the Yale & Towne

Duplex Convertible Screw Block.

Mfg. Company of Stamford, Conn. As indicated by its name, the leverage by which the hoisting capacity is obtained is that of a screw motion or, more properly, a worm and worm wheel motion. The construction is such as to permit a much higher efficiency to be obtained than is practicable with an ordinary worm wheel motion, and the device by which the load is sustained, and which acts in conjunction with the worm, is capable of conversion at the will of the operator so that a dispatch lowering action may be obtained when so desired.

As shown in the engraving, the new block is neat in appearance, the worm wheel being placed between the two chain sheaves and all the parts symmetrically disposed. The worm and worm wheel motion, as well as the device for sustaining the load, are all inclosed in an oil tight casing, thus insuring thorough and continuous lubrication of the working parts, and preventing the entrance of dust and grit. The two hoisting chains are attached at their lower ends to a yoke to which the hook is secured, each chain having a swivel connection so that kinking or entanglement of chains is impossible. The block is light in weight, convenient in operation, and possesses a high degree of efficiency, standing both in cost and efficiency midway between the differential and triplex blocks. The sustaining feature is obtained by means of a friction plug which receives the end thrust of the worm shaft. The friction of the end of the shaft upon this plug furnishes sufficient resistance to prevent the running down of the load and hence lowering must be effected by pulling on the hand chain.

The most notable point of the block is the convertible feature by means of which the change from safety to dispatch lowering may be made. The convertible feature is arranged as follows: The load hanging upon the hook causes an end thrust upon the worm shaft, and this thrust is received by a plug screwed into the casing of the block and pinned through to prevent rotation. By backing out the pin the cap may be removed and the plug taken out and reversed. The end of the plug which is in contact with the worm shaft is formed so that the bearing is upon an annular or ring surface at the circumference of the end of the plug, and hence the distance from the center at which the friction acts to retard the rotation of the shaft is great enough to keep the load from running down. Under these conditions the load will only continue to descend so long as the hand chain is operated, this constituting the safety lowering arrangement. If, however, the user desires dispatch lowering, he unscrews and reverses the plug so that the end thrust is taken by the reduced end. With this arrangement the load will continue to descend after it has once started, and in this manner the block can be converted from safety to dispatch lowering. This construction enables the user to decide which form he desires, and the block can at once be set for either function, after which no change need be made until the block is transferred to some other line of work for which a reconversion may be desired. The dispatch lowering is especially convenient for bridge works and for many situations in which it is desirable for the operator to stand clear of the load.

The fact having been noised abroad that the municipality of Pittsburgh are giving work to the indigent of that city, an influx of the unemployed from all parts of Western Pennsylvania into Pittsburgh is taking place. As it is all the city can do to take care of its own, the line of relief has had to be drawn very closely.

Consequent on the opening of the Manchester Ship Canal, the city of Manchester, having become a seaport of the United Kingdom, has received a warrant making it a port for customs purposes from January 1. The Admiralty have also assumed Jurisdiction of the port.

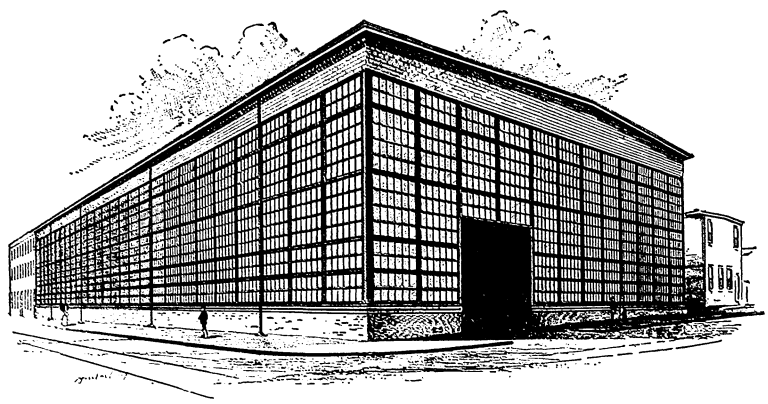
The Chicago Horse Shoe Company.

The Chicago Horse Shoe Company are now running their plant regularly, turning out standard horse and mule shoes. The works, which are located at East Chicago, just outside of the city limits, were founded some four years since, but owing to a combination of adverse circumstances the company have but recently begun to supply the trade with their products. During the interval the management of the company has changed completely, and the control has passed into the hands of practical business men, thoroughly acquainted with the peculiarities of the horseshoe business and expert in manufacturing details.

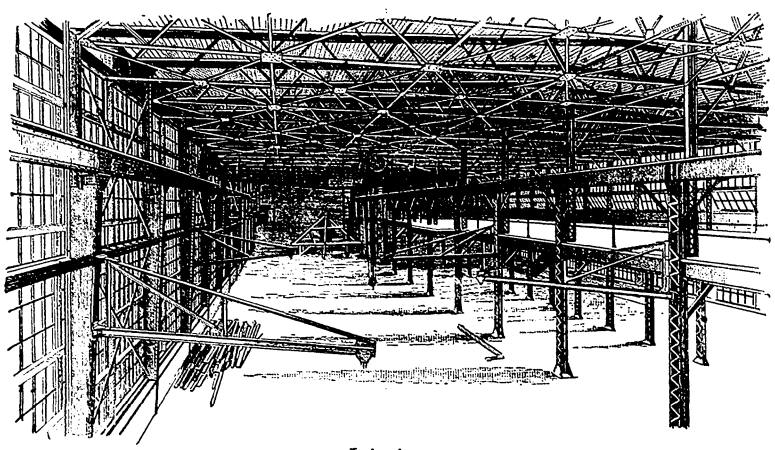
The plant as it now stands is entirely new, all the machinery having been perfected and installed by the present managers. It has been satisfactorily tested in making up a large amount of shoes for stock, which are pronounced by experts to be of a character to meet the exacting requirements of critical consumers. The location of the works on the line of the Pittsburgh, Fort Wayne & Chicago, the Belt Line and the Chicago and the Calumet Terminal railroads affords all the facilities that could be desired for prompt shipment in any direction, as the two last named roads connect with every line running into Chicago. The ground occupied comprises 8 acres, which gives the company ample space for future extension. The principal building is a large structure in the form of an L, the main part of which is 165 by 90 feet, and the wing 90 by 64 feet. Detached from the main building is the boiler house, a brick building with a metal roof, containing a battery of four 16-foot tubular boilers. The machinery consists of a complete outfit of Goodenough horseshoe machines, six machines for making flat shoes, two trains of rolls for rolling horseshoe bar, power shears, forges, large and small heating furnaces, and a complete machine shop with lathes, drill presses, planers, &c. The motive power is supplied by eight engines of 1000 horse-power in the aggregate. All the special machinery has been built on the ground, in the company's own shops, and embodies numerous special devices which have been suggested by the combined experience of the managers of the company. No expense has been spared in securing the best appliances to accomplish the most perfect results. The equipment of the machine shop is superior to that usually found in establishments not making a specialty of machinery. Among the peculiar features of the processes employed may be mentioned the creasing of the bars in their last passage through the rolls, which is thus done with unfailing accuracy, and the imparting of a perfectly smooth surface to the finished shoe, which is done by the last machine through which the shoes pass.

The managers of the company lay particular stress on the fact that they are engaged in producing nothing but shoes. Dealing exclusively with one product, they can concentrate their energy on its peculiarities and anticipate improvements which the progress of the times may cause consumers to demand.



They further have the distinction of being the first exclusively horseshoe manufacturers to get into regular operation in the West. They are not only located at the gate of the most desirable market in the country, reaching all the great Western jobbing centers at low rates of freight, but gain peculiar advantages in the low cost of scrap and the cheapness of fuel. Oil is at present exclusively used for fuel in raising steam and operating the heating furnaces and forges, at very much lower cost than coal. The oil is piped from the Standard Oil Company's main line into a storage tank. It flows thence into a smaller tank underground, from which it is pumped through a stand pipe to the points of consumption to secure a uniform pressure. A complete gas producing plant has, however, been erected, which is ready for use at any time if oil should become too expensive. A natural gas pipe line runs in the immediate vicinity and the coal fields of Indiana are within easy reach. The fuel question is, therefore, pretty completely covered.

The capacity of the works is from 500 to 600 kegs of horse and mule shoes per working day. Plans have been prepared for additional buildings and the duplication of the machinery now in use, which will be put in execution during the coming year. The company manufacture steel as well as iron shoes, so as to meet the demand for steel shoes which is rapidly becoming a feature of the horseshoe trade.



The main office of the company is in the Ashland Block, room 908, corner of Clark and Randolph streets, Chicago. The president of the company is G. N. Caleb; vice-president, William Poillon; treasurer, Walter S. Caleb; secretary, E. A. Schwarzenberg. These officers together with Hon. William A. Vincent compose the Board of Directors.

Shops of the Fuller Iron Works.

The new machine shop for the Fuller Iron Works, at Providence, R. I., is now completed. The building is 90 feet in width, and in order to secure good light for the interior it was found necessary to either use skylights in the roof or to adopt some other construction besides brick in the sides of the building, as the brick walls obstruct the light to such an extent that the center of the building would be very badly lighted on a dark and cloudy day. To obviate this trouble the patented construction of the Berlin Iron Bridge Company of East Berlin, Conn., was adopted. The sides of the building are almost entirely of glass, with steel posts only obstructing the light. These glass sash are so arranged as to swing, thus allowing complete ventilation in all kinds of weather. The plan commends itself for cotton mills, woolen mills, and that class or construtión, where the width is excessive and the hight between joints is limited. It is almost impossible to light any building of over 60 feet in width unless skylights are used in the roof, and the objection to them is that they leak, either in the skylight itself or in the connection between the skylight and the roof. The main shop of the above building is 50 feet in width and 200 feet in length. A traveling crane controls the entire length of this portion of the building, and it is made of sufficient hight so that machinery of all kinds can be set up under it. The floor spaces in the immediate vicinity of all machines are also con-

Exterior.

Interior.

SHOPS OF THE FULLER IRON WORKS.

Hosted by Google

trolled by jib cranes operated by two hands, thus bringing the floor space in the immediate vicinity of the machine under the full control of the operator. The lean-to or wing is 40 feet in width and 142 feet in length. This is made two stories in hight, the upper story being used for light work, the lower floor being controlled by jib cranes secured to the columns so that heavy work can be moved in and out from the central portion of the building.

NEW PUBLICATIONS.

SUBJECT MATTER INDEX OF TECHNICAL AND SCIENTIFIC PERIODICALS. Compiled by Dr. Rieth, for 1892. Published by C. Heymann, Berlin; B. Westerman & Co., New York.

Under orders of the German Patent Office Dr. Rieth compiles annually an index of the articles printed in the leading technical and scientific journals of the principal countries. The titles are given in the language in which the article was printed. Throughout the typography is clear and the editing exceedingly careful. In its way it is probably the best yet published and will prove exceedingly useful to those who are familiar with the German language.

SMOKE ABATEMENT IN ST. LOUIS.

The Smoke Commission of the City of St. Louis, which has done such admirable work in the past, has printed two brief reports in pamphlet form, of which the first is a report made concerning a canvass of the manufacturing establishments of St. Louis, with special reference to their compliance with the city ordinance. They have studied the boiler plants in the city, and insist that with certain exceptions means could be employed to avoid the smoke nuisance. Among the exceptions are the boiler plants of iron and steel manufacturing establishments. The same report embodies a draft for a general standard for testing smoke abatement devices.

Under the instructions of the ordinance, tests must be made of the different devices submitted for the prevention of smoke. A special report, issued in October, deals with the Boileau device submitted for test by the Improved Zigzag Grate Bar & Smoke Preventing Company. The commission summarizes its conclusions by stating that up to 25 pounds of coal consumed per hour per square foot of grate area the Boileau device is capable of reducing the average smoke emission 90 per cent., or to an average smoke emission within a limit of 10 per cent. of smoke, if proper care and attention by given it. They state that an increase in boiler capacity up to 15 per cent. above rating can be obtained without endangering the smoke record, but except in those cases where such an increase in capacity results in a money saving there will be no direct return on the investment, which must be charged to improvements required by the smoke suppression ordinance.

GEOLOGICAL SURVEY OF NEW JERSEY. Annual Report of the State Geologist for the year 1892. Trenton, N. J.

The character and scope of Professor Smock's annual report have become sufficently familiar to those interested in geological work to allow us to state that he has added another volume of great interest to the series. Practically the report for 1892 deals with a number of different branches, the first part taking up surface geology, with special reference to the influences of the glacial period. Part II is a thorough review of the marl deposits in which New Jersey is so rich, and which constitute so important a resource. The third part continues former work on the collection of data for a general report upon the water supply and water power of the State, while the fourth part is a collection of the data accumulated during 1892 on the artesian wells of Southern New Jersey.

The first fruits of Professor Smock's visit to Europe to study the Dutch system of sea dikes are laid down in the fifth part of the report. The usual statistics are submitted, which show that in 1891 the production of iron ore was 551,258 tons, while the production of zinc ore was 76,032 tons.

EIGHTEENTH ANNUAL REPORT OF THE CHIEF INSPECTOR OF MINES OF OHIO. Columbus, 1893.

Robert M. Haseltine has made his usual report as Chief Inspector of Mines to the Governor of Ohio, his figures showing that in the year 1892 the production of coal was 14,591,908 tons, of which 2,239,080 tons were produced by mining machines. In all there were 21,002 miners employed, of whom 333 were engaged in operating mining machines. There were 5970 day hands, of whom 2301 were employed in following up the mining machines, blasting down and loading the coal after it had been undermined. There were produced in 1892, 1,253,110 tons of fire clay, which was a heavy increase over previous years. The production of iron ore has gained a little, but still remains insignificant. The production was 8680 tons of blackband, and 81,042 tons of hematite. The usual elaborate statistics follow. The bulk of the volume, however, is taken by the detailed reports for every individual mine made by the inspectors of the different districts.

FIFTEENTH ANNUAL REPORT OF THE BUREAU OF STATISTICS OF LABOR AND INDUSTRIES OF NEW JERSEY.

The Chief of the Bureau of Statistics of Labor and Industries of New Jersey has continued during 1892 his investigations into the co-operative building associations of that State, where they have developed into so important a factor. At the close of the year 1892 there were in active existence in that State 291 associations, with 1775 series running, 571,665 shares outstanding, of which 153,813 were pledged. There were 87,762 shareholders and 21,752 borrowers, the net assets of the associations figuring up to $29,989,767. Newark, with nearly $6,000,000, and Jersey City, with a little over $5,000,000, are the two principal towns in which these associations flourish. Very interesting details are given concerning the management of the different bodies, which is followed by official statements of a number of the associations on the part of their secretaries. The detailed report of each of these associations is tabulated for ready reference.

The second part embodies a continuations of the line of investigation begun a number of years ago, whose object it was to ascertain the number of years workmen are able to follow a given employment. During 1892 the bureau devoted its attention to cigarmakers, bakers and railroad trainmen, the latter including engineers, firemen, brakemen, conductors, switchmen and wipers. The individual returns aggregate 4853. The reports give the age at which work was begun and the age at which loss of activity was first experienced and its causes. The Chief of Bureau presents details of this investigation which afford at least approximate data.

POOR'S DIRECTORY OF RAILROAD OFFICIALS AND MANUAL OF AMERICAN STREET RAILWAYS; 1893. H. V. & H. W. Poor, 70 Wall street, New York.

Poor's compilations are too thoroughly well known in the many trades which seek patronage from railroads to need lengthy reference by us. The Directory of Railroad Officials gives lists of all the officials of the operating railroads in the United States and Canada, and of the chief railroads in Mexico, and presents also official lists of master mechanics, purchasing agents, chief engineers, master car builders, master car painters, general managers and general superintendents. The same volume deals with private logging and mining roads and with city and suburban tramways.

The semi-annual meeting of the Western Pennsylvania Central Mining Institute was held in Pittsburgh last week, the sessions lasting two days. In his opening address to the delegates, President T. K. Adams said he believed the institute had been one of the most powerful auxilaries in disseminating technical knowledge among the miners of Western Pennsylvania. During the session a number of papers were read, one of which, entitled "Electrial Machines and Electricity as Applied to Mining as a Power," was presented by George Gould of Cannelton, Pa., and attracted considerable attention. In his paper Mr. Gould advocated the use of a simple machine which could be adjusted to suit any depth of vein in preference to that which causes the mixing of coal, slate and dirt, destroying the commercial value of the product. T. J. Evans of Johnstown, Pa., discussed the question of "Which gives the most useful effect in mine ventilation, blowing exhaustion, fans or furnaces." The next session of this institute will be held in Pittsburgh in June next.

It is reported that the coming week will be opened with more labor disturbances in the Mahoning and Shenango Valleys. Puddlers expect a reduction which will bring their wages to a level with the price paid in non-union mills—viz., $4 per ton. Pittsburgh manufacturers whose puddle mills are operated on a union basis declare that they do not intend to make such a demand for the reason that the small quantity of muck bar being produced cuts but a slight figure in their total output. In other districts where but little steel is used operators find it necessary to get a lower rate for puddling so as to compete successfully with the non-union mills, which are the largest producers of muck bar and merchant bar iron, consequently a general reduction is talked of and considered certain. So far consideration of the matter has been confined to Pittsburgh and Eastern Ohio.

The ordering of several more United States war ships to Rio indicates the determination of the Government to protect commerce and American interests in that troubled seaport.

GEO. W. COPE, - - ASSOCIATE EDITOR, CHICAGO.
RICHARD R. WILLIAMS, - HARDWARE EDITOR.
JOHN S. KING, - - - BUSINESS MANAGER.

The Passing of 1893.

Within a few days the books for 1893 will be closed. The balance then struck will be satisfactory to very few business men. But it can hardly be said that they will be disappointed, as the year opened with rather gloomy prospects and a general apprehension of troublesome times. There were some to be found in almost every branch of the iron trade who refused to take counsel from their fears and persistently looked for better times, but they were without influence, and as the months rolled by their belief in an improvement also grew weaker. It may safely be said that the experience of 1893, in its percentage of shrinkage in the volume of business from that of the preceding year, has broken the record. Never before was there such a rapid reduction in the demand for iron and steel. From the crude material to the most highly finished products the curtailment of business was without precedent. The natural concomitant of such a condition of affairs was a thorough demoralization of prices. Values have tumbled lower than in any previous period of depression, and for some time the question of profits seems to have been eliminated from transactions.

From the beginning of the year until now there has been a constant succession of failures among manufacturers and iron and steel merchants. Great establishments, supposed to have almost unlimited resources, have been swept from their rock-rooted foundations by the rising tide of disaster, together with an almost uncountable number of small concerns whose capital was sufficient for ordinary conditions, but could not withstand the terrible strain of so severe a financial panic as that of 1893. Honored names, that have been respected for many years as synonyms for stability and sagacity, are frequent on the rolls of the bankrupt for this year. Assets that were not capable of immediate conversion into cash have been no better than worthless paper in meeting the demands of creditors, and many sound business men have for the first time realized how suddenly riches can take wings. Prosperous communities, that have thriven wonderfully in the bright sunlight of the prosperity with which this land had been blessed for so many years, have been prostrated by the blight which has overtaken their manufacturers. They have been transformed from wealth-producing hives of industry into settlements of paupers, appealing for relief to the citizens of other localities who are themselves struggling with the problem of caring for the unemployed thronging about their own doors. The public soup-house, which has only been known at rare intervals in American history, has become an institution in every city and in most of the large towns. Starvation threatens many a man of brawn and brain who is willing and anxious to work but is unable to find employment. This is the picture which 1893 leaves on the canvas that records the procession of the years and the birth of epochs.

But, leaving this dismal subject, what of the future? Will 1894 bring better times? Common sense argues in the affirmative. There is, of course, no magic in mere numerals, and the writing of 1894 will not in itself bring a change in business. But we have faith that the worst is over, and that the experience of 1893 will neither be repeated nor even rivaled for years to come. The revival of prosperity may be impeded by unwise legislation, but it cannot be completely checked. The business interests of the country are on the way to recovery, and they will eventually completely recover. As spring approaches the ranks of the unemployed will be drawn upon by establishments that are even now endeavoring to get matters into shape so that a start can be made as soon as prospects are favorable for business. Men of enterprise, through whose ambition or unrest other men find employment, will undertake new ventures, as before, and timid capital will come out of its hiding place at their seductive call. Although 1893 may expire with leaden skies and frozen streams and a pall of snow covering all vegetation, the sun will again shine in 1894, the water will run, the grass will grow, and men will imbibe fresh courage and attempt greater achievements than the past can boast.

Steel for Railroad Ties.

One of the fallacies which seem to possess a very tenacious life is that cheapness of any staple article must necessarily be reflected in a rapid increase in consumption. Too many business men and manufacturers expect the effect of low prices to tell almost immediately. As a matter of fact, it takes a very considerable time until a new material or a new article overcomes prejudice and finds a widening use. Probably one of the best illustrations of this was furnished by the history of nickel. When powerful interests took hold of the deposits of Noumea they greatly increased the production, hoping to stimulate consumption by a marked lowering in the price. They simply found, in the first few years, that they were accumulating an unprecedented stock. In recent years the opening up of the Sudbury deposits led to further reductions in price, and yet the consumption has not developed in proportion. Had it not been for the electrical developments copper would have gone through very much the same experience.

We admit, of course, that ultimately consumption is very largely increased as the effect of low prices, but we contend that its development is far from being as rapid as many expect. We are led to call attention to this experience since the hope is being expressed, as a modest compensation for the sufferings which the iron trade is going through, that steel will rapidly capture new fields and that we shall experience a growing *per capita* consumption. There can be no doubt that that is sure to come, but it is well not to be too sanguine.

Among the uses in which cheap steel seems destined to open new channels is conspicuously that for railroad ties. The American iron trade has been pretty indifferent to this subject thus far, for very good reasons. It was all very well for the advocates of steel ties to figure out that there was economy in their use, considering their longer life and their ultimate value as scrap. The fatal objection thus far has been their excessive first cost, which few American railroads had the financial ability to meet. That objection, however, is now gradually disappearing with the unexpectedly great decline in the price of soft steel. Probably steel sleepers could be produced to-day in certain sections of the country at, say, 1.5 cents per pound, finished. The production of this class of material has been a source of a very large tonnage to European steel mills, and might become valuable to some of our large plants which are suffering from lack of work, present or prospective. The users of steel ties could avail themselves of the long experience of railroads abroad, so that they would not be hampered by a protracted period of experimenting. We believe that the time is approaching when steel makers and railroad managers alike should carefully look into this important subject.

The phenomenally low panic prices at which iron and steel, crude and manufactured, have sold during the last month have made it possible to do some export business. We have covered the bulk of the requirements of such countries with which we are on favorable terms through our reciprocity arrangement. This is notably the case with Cuba. But in other lines, too, we have captured a little trade. In cast iron pipe our merchants have been able to figure on such contracts as 8000 tons for Mexico and 15,000 tons for Japan, with a very good chance of taking the business. Our modern pipe foundries have excellent methods of handling material and product, and now, with an exceedingly low cost of pig iron, notably in the South, they are in a position to make very attractive prices. They are being aided in some instances by the transportation interests, who are doing their

Hosted by Google

share to bring work into this country. While it would be a gratifying thing under present circumstances to capture a few foreign contracts, it will not do to regard them as the harbingers of regular business. On the contrary, it is devoutly to be hoped that our home markets will again soon get into a sufficiently remunerative shape to enable us to abandon efforts in foreign countries whose business we can only secure by submitting to panic prices for manufacturers and starvation wages for labor.

CORRESPONDENCE.

The Kihlafors Iron Works.

To the Editor: In E. C. Potter's flattering and favorable article in your valued journal about Swedish iron, and especially the Swedish iron and steel exhibits at the World's Fair, for which I and the Swedish iron and steel manufacturers feel most grateful, occur some statements about the Kihlafors Iron Works which surely have been given to Mr. Potter at the fair by some person not well posted on Kihlafors manufacture. As those statements may be somewhat disadvantageous for Kihlafors Iron Works I herewith humbly venture to make the following corrections:

Kihlafors Iron Works products consist of pig iron, gray, mottled and white, with the trade-mark R-W-n, and of this pig iron is wrought iron with the trade-mark (·R·) W-n manufactured.

Their products have been exported principally to England, but also to Germany and other countries. The pig iron has been used for making Bessemer and open hearth steel, and the wrought iron for manufacturing the finest crucible and cement steel, for which it is considered very suitable on account of its purity, homogeneousness, density and toughness. The percentage of sulphur in the pig iron varies between 0.01 and 0.015, and phosphorus between 0.026 and 0.028. The percentage of sulphur in the wrought iron varies between 0.005 and 0.007, and the phosphorus between 0.023 and 0.024. The price of the pig iron is £5 and the wrought iron £12 per ton, free on board ship at the port of Söderhaum, Sweden. Kihlafors Iron Works' products have been awarded the highest prizes at the exhibitions at Paris, 1855 and 1867, at London, 1862, at Stockholm, 1866, at Philadelphia (Jernkontorets Collective Exhibit), 1876, and at Chicago (Jernkontorets Collective Exhibit).

ERIK G. SON ODELSTJERNA.
FILIPSTAD, SWEDEN, November 30, 1893.

The following rate of wages is now being paid at the works of the Martin Coke Company, at Fairchance, Pa., in the Connellsville region: Mining heading coal, 85 cents per 100 bushels; mining room coal, 75 cents per 100 bushels; haulers, $1.60 per day; trackmen, $1.60 per day; day labor, $1 per day; drawing coke, 40 cents per 100 bushels; leveling, 7½ cents per oven, and all other work in proportion. It is estimated that these rates are about 35 per cent. below those paid under the scale of the H. C. Frick Coke Company, which expires on January 31, 1894.

Washington News.

(*From our Special Correspondent.*)

WASHINGTON, D. C., December 26, 1893.

The majority members of the Ways and Means Committee who have remained here during the Christmas holidays do not seem to feel any apprehension as to the result of their parliamentary contest in defense of their bill in the House.

They propose to begin the debate next week and bring it to an early finish. Both sides will have a fair chance for discussion. After the record has been made in general debate and the amendatory stages under the five-minute rule are carried to a reasonable extent the vote will be taken.

The effort to organize an opposition within the ranks of the majority under Bourke Cockran is not without considerable strength, but whether it can be brought up to a point where success might be possible will not be definitely known until the House reassembles.

There has been some expectation that the Northern Representatives of the majority during their visits among their constituents might learn some facts of the situation which might stiffen their views sufficiently to co-operate in a movement to materially amend the bill in Committee of the Whole, but from present indications there will be no changes in the House except with the approval of the majority of the committee in charge, and these are not likely to be important. The objection which most of the majority raise against the bill is not as to the rates, but the abnormal conditions upon which it is framed. They do not favor a bill which cuts off about $60,000,000 of revenue from customs which has to be made up from direct taxation from internal sources.

They claim the platform upon which the majority are operating demands a Tariff for revenue, which is not the character of the bill which has been reported from the Committee on Ways and Means. It is not probable, however, that this will make much difference at this stage of the contest.

The discussion in the House from present indications will be purely on partisan lines, the local interests of constituencies controlling the views of individual Representatives. Whether these views can be crystallized into an organized opposition when the vote is taken is not probable from present appearances. There is a general feeling, however, among the majority in the House that when the bill reaches the Senate it will be taken up with less reference to politics, and will there be so amended and modified as to make it what party promises demand—a revenue tariff.

If the Senators who have expressed themselves as favorable to a very radical change in the bill, as reported from the Committee on Ways and Means, carry out their plans, coal will be restored to the dutiable list at about 45 instead of 75 cents a ton. Iron ore will also be restored at a low rate. The question of free ore, however, does not seem to be such a serious one to the Senators as free coal. It is claimed that American ores are so superior to the foreign that the latter will not come into competition more than at present for mixing purposes.

This question, however, will be settled to the full satisfaction of the Senate Committee before any action is taken.

The free lumber and salt will doubtless be allowed to remain, unless the States interested can form a combination with coal, iron ore and wool.

The item which shares with coal and iron ore the greatest strength in both Houses of Congress is wool. The advocates of free wool have not been so vigorous in their demands since they have found woolens subjected to a rigid cut with the rest of the dutiable items under the Ways and Means bill.

A careful canvass of the House reveals the fact that if the interests of iron ore, coal and wool can make common cause in the ranks of the majority, with the incidental aid of lumber and salt they would be able to control the situation and restore these items to the dutiable list, if not at the full rates of the existing duty, at all events at a compromise figure which would tide over the present crisis until the people can have an opportunity to take a dispassionate view of things and render their verdict accordingly. Whatever shall be done by the present Congress in the way of Tariff legislation will remain in force until another national election comes around three years hence. There are some who claim that the industries of the country by that time will have adjusted themselves to the new conditions and that the tariff as an issue will be eliminated from national politics. That remains to be seen if the opponents of the bill fail to defeat or modify it. The opponents of the tariff bill among the majority in the House are counting upon the New York, Alabama, Louisiana and Maryland Senators, with one each from New Jersey, Ohio and West Virginia, to put the measure in a less objectionable shape. But this at present is an uncertain quantity.

Senator Voorhees, who is chairman of the Committee on Finance, is disposed to be very conservative. He says we want a tariff bill which will yield revenue, not reduce it, and American industries, if not protected beyond the point of raising revenue, must at least be protected up to that point.

The committee, as they now talk, are disposed to be very fair in the matter of giving the manufacturers a chance to be heard in their own behalf. They are already in receipt of a mass of petitions and letters from every class of the people pointing out the inevitable derangement of business and industry if the bill before the House should pass.

The attitude of Senators Hill and Murphy is very pronounced against the bill in its present form. As they are not likely to be controlled except by the interests of the great State at their back, their opposition in the Senate is likely to produce results if possible.

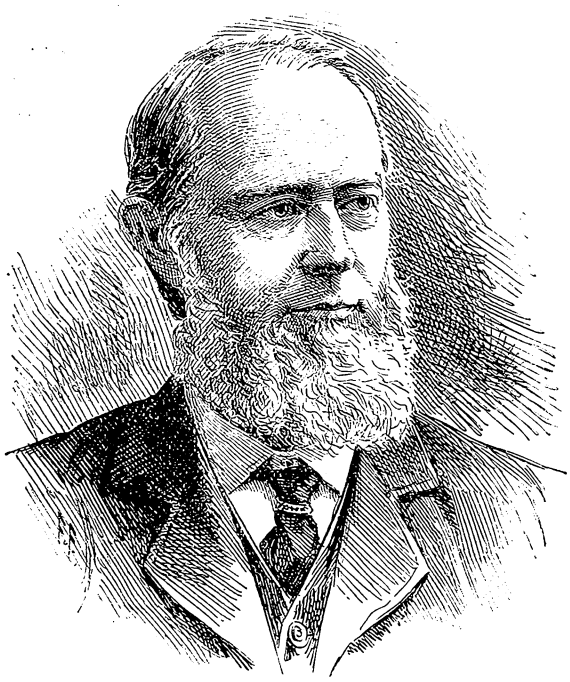
The statistical documents which are being prepared under the auspices of the Ways and Means Committee do not strengthen their measure in the opinion of many of those who will have it to defend.

A table of comparisons showing an estimated loss of revenue of $65,407,000 condemns it in the opinion of many even of the majority, who insist that they promised the country a revenue tariff, which this is not. The duties under the metal schedules, it is shown, have been reduced from $20,526,000 to $12,631,000, and under other schedules in the same proportion.

The contest in the House will be short. The managers of the bill are still counting upon getting it in the Senate by February 1. It is generally conceded that the quicker it gets there the better, as the real tariff battle will be fought in that body.

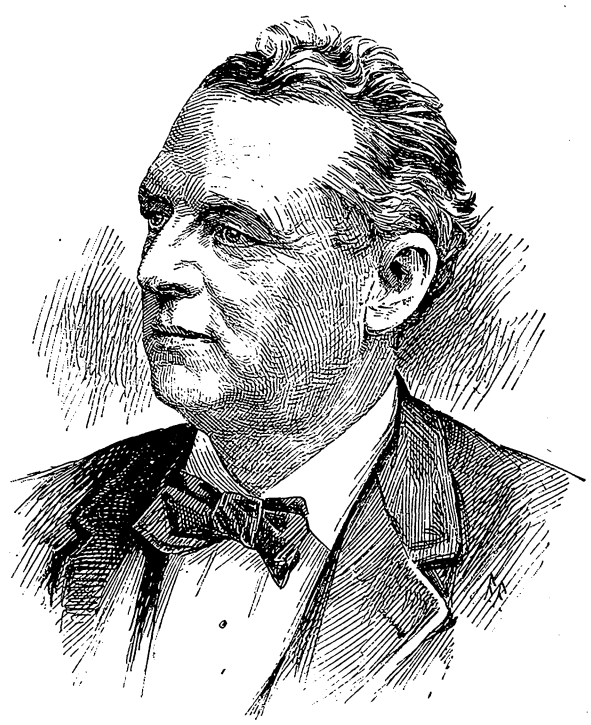
The majority and minority reports of

Hosted by Google



the Committee on Ways and Means on the bill as a rule find their champions on partisan lines. Outside of this there is little said on the subject. The reports are regarded as setting forth the position of the two great parties and the general line of support and opposition. The antagonism within the ranks of the majority will not be conducted on the lines of party or the reports, but from the standpoint of local interests.

OBITUARY.



GEORGE H. BABCOCK.

STEPHEN WILCOX.

The death of George H. Babcock on December 16 and of Stephen Wilcox on November 27, happening so nearly at the same time, is a rather singular coincidence. They were intimate as boys, but as young men they were in different enterprises; when they reached full manhood they became associated in business, and by their ability, energy and perseverance revolutionized an important industry and succeeded in establishing the largest boiler manufacturing concern in the world.

GEORGE H. BABCOCK.

STEPHEN WILCOX.

Mr. Wilcox was born in Westerly, R. I., to which town Mr. Babcock removed when a boy from New York, and there they grew up together and formed that close friendship which continued through life. While a young man Mr. Wilcox became identified with the development of the steam engine, and his invention of a practical caloric engine really antedated that of Ericsson, both submitting their engines to the Light House Board, by whom they were to be used in operating a fog horn, about the same time. For several years Mr. Wilcox studied energetically the caloric, gas, and oil engines, probably spending more time and money on his experiments than had been spent before or since. As a result he became convinced that these methods of generating power were not practicable or economical except for small units, and that neither could hope to compete with the steam engine on even terms.

Mr. Babcock's early experience in business was in connection with woolen mills; he next started a newspaper at Westerly, which is now published, though under a different name. He was one of the first to practice photography, and through life manifested the liveliest interest in the work of the camera. He was the first inventor of the polychromatic press for printing several colors at one impression, and upon this press as a foundation all the present machines for printing in colors are built up. The first printers' bronzing machine was also a result of his ingenuity. He next entered the office of Thomas D. Stetson of New York, who had a large practice as a patent lawyer. Afterward he was connected with the Mystic Iron Company and the Hope Iron Works of Providence as draftsman. It was while at the latter place that he invented the system of cut off engine afterward known as the Babcock & Wilcox engine, the two men joining in business relations then for the first time. This engine was successful as long as the Corliss patents were in force, but as soon as they became public property competition reduced the price of engines, and as the Babcock & Wilcox engine was expensive to build the business was dropped. This was in the year 1866 or 1867.

Previous to this, in 1856, Mr. Wilcox invented the original of all the inclined water tube style of boilers, having a set of inclined water tubes connected with water spaces at their ends and to an overhead steam and water reservoir, through which there was a continuous circulation of water and in which a cross flow of the gases was established by means of diaphragms. This invention was perfected by both, and later by them and other engineers in their employ, and was the base upon which the business of the Babcock & Wilcox Company was built. In 1868 they came to New York to push their engine business, and arrangements were made by which they were built by the Hope Iron Works of Providence; by Morton, Poole & Co., Wilmington, Del.; Poole & Hunt, Baltimore, Md., and the C. & G. Cooper Company of Mount Vernon, Ohio. As above mentioned, this business fell through on account of the competition due to the free building of Corliss engines, and they started the New York Safety Steam Power Company, building small engines with the safety boilers. This was continued for a number of years, during which the manufacture of the boiler based on Mr. Wilcox's invention was begun, and it gradually assumed such proportions that in 1878 both withdrew from the active management of the Safety Steam Power Company to give all their time to the development of their boiler busines. This was continued as a firm up to 1881, when it was formed into a stock company. At that time Mr. Wilcox dropped out of active business life but continued making experiments on compound, triple and quadruple expansion engines at high pressure in connection with marine boilers, while Mr. Babcock remained at the head of the business and was active for a number of years.

Mr. Babcock was of a quick, decisive disposition, able to bring to bear on any subject all the knowledge he possessed in relation to that subject. He could readily and rapidly take up a new subject, and master it thoroughly in all its details. When he was 58 years old he took up the study of French and acquired the language sufficiently for all practical purposes for reading, writing and conversing, showing that his mental ability was strong at that time. He was like a mechanic with a modern set of tools, every one sharp and ready at hand for use.

Mr. Wilcox, on the other hand, was of a retiring disposition, well grounded and thoroughly equipped for reasoning out all mechanical problems, with a well balanced mind, singularly adapted

Hosted by Google

to all kinds of mechanical experimenting and able to size up the results and reduce them to practice; though much slower in argument until he had thought a problem out, when he had once mastered it his arguments were clear, to the point and very convincing.

Mr. Babcock was a past president of the American Society of Mechanical Engineers, and they were both among the earliest members of the society, of which both were life members. Mr. Babcock was of a literary turn of mind, and possessed a forcible and clear way of presenting facts. He lectured a number of times at Cornell University on scientific subjects.

Mr. Babcock was a prominent citizen of Plainfield, N. J., to which place he went to live in 1873, and he had been president of the Board of Education since 1885.

Mr. Wilcox was a valued citizen of Westerly, R. I. The people of that place wanted to erect a soldiers' monument, but Mr. Wilcox suggested that a library be erected instead, his argument being that the latter would be of practical benefit to the people. He got the citizens interested in his scheme, and they donated a small sum toward the project, when Mr. Wilcox stepped forward, bought a lot and contributed a sum sufficient to insure the erection of a substantial and creditable structure. The building, which is now in process of erection, will contain, besides the library, lodge rooms for two G. A. R. posts, and the basement a gymnasium for the boys of the town.

The Babcock & Wilcox boiler was brought to its present development by the persistency and courage, at the outset, of the two men who have just passed away in embodying their own ideas in it and in using the thoughts of others where they could be adopted with profit. They lived to enjoy the fruits of their labors to a greater degree than is given to most men and have passed away in the prime of life, regretted by those whom they have left.

C. M. HOPKINS.

C. M. Hopkins died at his residence in this city, suddenly, December 26, of acute rheumatism. He was ill but a few days, having been at his place of business, 64 Reade street, New York, as late as December 22. He was best known to the hardware trade South, where he represented six or seven manufacturing concerns as selling agent in that territory, among which were the Mallory Wheeler Company and Hermann Boker & Co. He was very popular with his associates and customers, and is referred to by merchants as having been thoroughly informed in his business, of excellent character, and loyal in friendships. He was born in Charleston, S. C., about 48 years ago, and after the Rebellion, where he served as an officer in the Confederate army, he was employed by Moritz & Keidel, Baltimore, Md., afterward with S. A. Haines Company, New York. His remains will be taken to Baltimore, December 28. where the services will be held.

As we go to press the death of Sidney Shepard of Sidney Shepard & Co., Buffalo, N. Y., is reported. We defer until a later issue reference to his business career, and the prominent position he has long occupied in the lines with which he has been actively identified.

Preparations for the Midwinter Fair at San Francisco have so far advanced that an admission fee is now charged to the fair grounds.

THE WEEK.

The general dearth of employment throughout the country is causing an extraordinary outflow of foreign laborers by the eastbound Atlantic vessels. The immigration authorities at Ellis Island, N. Y., report that their office is besieged daily by destitute aliens who, unable to obtain the means of livelihood in the United States, are urgent to be returned to Europe at the Government's expense. These applicants are mainly Italians and Hungarians, some of whom have tramped hither on foot all the way from Chicago and other distant points.

Chauncey M. Depew, who has just returned from a flying trip abroad, describes the commercial and industrial depression on the other side of the water as being equally acute with that of the United States. He says that "the universal complaint all over Europe is bad business. Nothing like it has been ever experienced. They all feel and look poor, and the number of unemployed is unprecedentedly large."

Buffalo's annual statistics of commerce, recently published, show that the present year has broken all previous records in the volume of the lake grain traffic as well as in the low cost of transportation. The grain receipts of the port amounted to 187,235,160 bushels, or 6,000,000 bushels more than those of 1892, and nearly thrice the total annual receipts of ten years ago. The freight rates for 1893 averaged 1.7 cents per bushel, the lowest in the history of lake commerce.

Governor Fishback of Arkansas has written to the President urgently complaining that the Indian Territory is a hotbed of criminals and outlaws, especially of train robbers, who there lay their nefarious plans and there seek refuge when those plans are consummated. He asserts that the Territory is a constant menace to the neighboring States, and the existing judicial conditions favor the continuance of these evils. The Governor wants the United States to assume complete jurisdiction over the Territory as the only remedy.

Statistics published by the *Railway Age* show very forcibly how disastrously the panic of the past year has operated in the railroad industry. The presentation shows that 71 roads, with a mileage of nearly 23,000 and an aggregate capital of about $1,300,000,000, have gone into the hands of receivers, three-quarters of them having assigned in the last half of the year.

A joint committee of three United States Senators and six Representatives will visit Nicaragua shortly to inquire into and report to Congress upon the material and political aspects of the canal enterprise.

The Walter A. Wood Mowing & Reaping Machine Company, a corporation organized under the laws of New York, but owning and operating a large establishment at St. Louis, have filed a mortgage to the United States Trust Company of New York, to secure $2,000,000 6 per cent. 12-year gold bonds, dated December 1, 1893, and maturing December 1, 1905. The mortgage given to secure the payment of these bonds covers all the buildings, machinery, fixtures, railroads, rolling stock and industrial plants owned by the company in all parts of the country.

MANUFACTURING.

Iron and Steel.

The Massillon Rolling Mill of Jos. Corns & Son, Massilon, Ohio, was closed down last week for an indefinite period on account of lack of orders. One hundred and seventy-five men are thrown out of employment by the suspension.

We are advised that the report that Philadelphia capitalists were about to purchase the plant of the Dunbar Furnace Company, Dunbar, Pa., is untrue. No. 2 stack of this concern is now being prepared for blast, and will be put in operation as soon as possible by the present owners.

Mabel Furnace of Perkins & Co., Limited, at Sharpsville, Pa., after an idleness of four months, has again resumed operations.

Some excellent records for production have recently been made in the Bessemer steel plant of the Bellaire Nail Works, Bellaire, Ohio. In one day recently over 500 tons of steel was turned out, and this amount was very little above the average for the entire week during which it was made.

When in full operation the plants of the Cambria Iron Company and the Johnson Company, both of Johnstown, Pa., give employment to about 7000 men. At the present time both these establishments are employing about 6000 men, showing that less than 1000 men are idle. Official notice has been given that Series A of the Johnson Company bonds will be redeemed at par on January 10, by the Citizens' National Bank, Johnstown, Pa.

About January 1 the Amalgamated Association of Iron, Steel and Tin Workers, at Pittsburgh, will be notified by the iron manufacturers of the Mahoning Valley that they will demand a reduction to $3.75 per ton for boiling, which is $1 less than the rate agreed upon in the scale adopted about November 1. This proposed reduction is justified on the grounds that non-union mills in Pittsburgh and at other places are paying less than $4 per ton for boiling. If the proposition to reduce the price of boiling in the Mahoning Valley mills is carried out, it will probably not go into effect before April 1, 1894, as under the terms of the scale agreed upon three months' notice must be given by either side before a change in the rates of the scale can be made.

A meeting of the stockholders of the Columbia Iron & Steel Company of Pittsburgh, with works at Uniontown, Pa., will be held at Uniontown on December 28 for the purpose of electing a new board of directors. A short time after this election occurs there will be a meeting of the newly elected directors to elect a president, secretary, treasurer and other officers.

The Muncie Muck Bar Company recently organized at Muncie, Ind., and now operating the plant of the Muncie Nail Company at that place, are now turning out a daily average of 25 tons of muck bars.

Jeremiah A. Long of Akron, Ohio, recently appointed Receiver of the Akron Iron Company, has taken charge of the branch offices of that concern located in New York, Boston and Philadelphia. At the Philadelphia branch it was found that the assets amounted to between $50,000 and $60,000, while the liabilities were less than $200. It is stated that the other branch offices also made excellent showings.

Last week notices were posted in various places at the Homestead Steel Works, Homestead, Pa., stating that the readjusted scale would be ready for signature on December 26, at 10 a.m. The new scales were left with the superintendents of the various departments. The notices state that all the tonnage employees desiring work under this scale must sign the same before Saturday, December 30, 1893, otherwise their positions will be filled by others. It is claimed that the revised scale affects only the wages of the tonnage men, and these have been expecting a reduction when the new scale was presented. The general impression, based by the men upon the aggregate tonnage earnings, is that in some positions the reductions will be equivalent to 40 per cent.

Furnace No. 2 of the Sloss Iron & Steel Company of Birmingham, Ala., whose rated capacity is 100 tons a day, made an

Hosted by Google

excellent record in the first week of December. The output was as follows: December 1, 170 tons; December 2, 162; December 3, 162; December 4, 171; December 5, 186; December 6, 172, and December 7, 181, a total of 1204 tons. Of this, all was foundry except 61 tons. The average daily output was 171 tons. The previous past week's record averaged 140 tons per day. The Sloss Iron & Steel Company are preparing to put their No. 1 Furnace in blast.

David B. Dewey of Chicago, the recently appointed receiver of the Minnesota & Wisconsin Railway and the Wisconsin Iron & Lumber Company, says that any statement that, even by implication, included the Eagle Furnace Company of Spring Valley, Wis., in the receivership was entirely wrong. The Eagle Furnace Company is a corporation independent of the corporations included in the receivership. It is in no way affected by the appointment of a receiver, except to be materially benefited, as the receiver will be able to carry out contracts in existence between the furnace company and the corporations under his control, by which the furnace company will be supplied with ore, charcoal and shipping facilities that will make it a prosperous operating industry. The furnace company is under highly skilled management, and the iron made from this ore is of a superior quality. The receivership of the railway and Wisconsin Iron Company is the result of a mutual understanding between Senator Sabin, the principal owner of the corporations, and the creditors, through which capital to develop and conduct the business has been arranged for, the ultimate object being the reorganization of the companies upon a substantial footing. The bondholders and creditors generally believe in the value of the properties, which through the lack of capital have not been developed.

Another tin plate works is projected at Elwood, Ind. The promoters are I. L. Morris of Chicago, Edwin Stevens of Cincinnati, and E. Levy of Elwood. Mr. Morris was formerly superintendent of the sheet mills of the Corning Steel Company. They have organized a company with a capital stock of $300,000, and propose to erect a rolling mill to roll black plates and to manufacture 2500 boxes per week. They announce that work on the buildings will begin at once.

We can now state upon good authority that the Irondale Steel & Iron Company, whose works were recently burned down at Anderson, Ind., will build a new plant at Middletown, notwithstanding contrary reports. Machinery not too badly damaged during the fire will be removed to the new location a few miles distant, and used in connection with such new parts as may be necessary. The plant will not be as large as originally intended, but it will be constructed in a manner that will admit of extension whenever the state of trade warrants such a course of action. The product of the new works will be iron and steel sheets of the lighter gauges.

William F. Bonnell, formerly manager of the Hubbard Iron Company, Hubbard, Ohio, and a number of old employees of that company are endeavoring to form a corporation on the co-operative plan to operate the rolling mills at that place, which have been idle for some time. To increase the working capital workmen have agreed to leave part of the earnings in the treasury of the new company. The merchants of Hubbard have agreed to accept pay orders. The plant is in good condition and ready to commence operations as soon as organization is perfected.

The part of the Ætna Standard Iron & Steel Company's plant at Bridgeport, Ohio, known as the Standard Mills, was operated to its full extent on Wednesday of last week. This was the first time such a state of affairs had existed since the June shut down this year. Operations were resumed again Tuesday of this week. In the Ætna department about one-half the plant has been operated.

The American Sheet Iron Works and the Phillipsburg Stove Works, both at Phillipsburg, N. J., closed down on December 23 to be idle ten days.

The Dover Iron Company, Dover, N. J., have suspended operations for an indefinite period. The works started about three weeks ago.

The Sargent Company, manufacturers of iron and steel castings, have opened a city office in room 519 Western Union Building, Chicago. Their steel castings department suffers from lack of trade at present but the iron department is doing a comparatively good business. They are deeply interested in the tests of brake shoes now about to be undertaken by the Master Car Builders' Association. The tests will be made on eight different railroads as well as in a number of shops. The company welcome these tests in the confident belief that the brake shoes which they manufacture will come out with flying colors.

The puddling department of the Elmira, N. Y., Rolling Mills have been shut down for the holidays. The plate and merchant mills are, however, still in operation.

At the nail works of the Ellis & Lessig Steel & Iron Company, Limited, Pottstown, Pa., the nailers will be subjected to a 15 per cent. reduction, and the other employees in the nail department will be reduced 10 per cent., to take effect January 1.

The Mahoning Rolling Mill Company, at Danville, Pa., have gone into the hands of a receiver, in the person of A. S. Patterson, its president. The liabilities are said to be $324,000, and the assets, $332,000.

The plant of the Clinton Iron & Steel Company, at Pittsburgh, manufacturers of iron and steel plates, has been in operation to nearly full capacity since the middle of September last. If possible to do so it is the intention of this firm to operate continuously through the winter months, with the idea of offering employment to as many men as they can.

The Ellwood Shafting & Tube Company, Ellwood City, Pa., have recently secured a contract for a large quantity of seamless steel tubing to be used in torpedo boats now being built by the Government.

Machinery.

The Lidgerwood Mfg. Company, 96 Liberty street, New York City, have received word from Smyth & Munford, Point Pleasant, W. Va., of the completion and satisfactory test of the largest Locke-Miller cableway in existence. The span, which is 1505 feet 6 inches long, is erected over the Kanawha River, and so high that steamers pass underneath it at even the highest tides. The main cable is 2½ inches in diameter, and the load carried is 4 tons. The cableway spans the lock and dam which Smith & Munford are to build in the river, and the quarry from which they receive their stone.

There is a strong probability that the works of the defunct Northwestern Car & Machine Company, at Oshkosh, Wis., will pass into the possession of the Chicago & Northwestern Railway Company.

The Sparta Iron Works, at Sparta, Wis., are now under the management of a stock organization entitled the Sparta Iron Works Company. L. M. Newbury and his son Carl Newbury, together with J. U. Durant, constitute the new firm. They will have increased facilities for doing work in their line, which includes not only foundry work but well drilling machinery and all apparatus connected therewith.

The Marinette Iron Works Company of Marinette, Wis., and Duluth, Minn., by a unanimous vote of the stockholders has gone into voluntary dissolution, affecting both the works at Marinette and West Duluth. The business will go on uninterruptedly as before. The directors will act as trustees and legal administrators.

E. Munroe & Son, boiler manufacturers of Pittsburgh, have a contract for furnishing two 150 horse-power water tube boilers for the new pumping station now being erected by the Monongahela Water Company, at McKees Rocks, Pa.

At the plant of the Hubbard Foundry & Machine Company, Hubbard, Ohio, the only department in operation is the foundry department, which is running on a large order for sinks.

The works of the Cleveland Twist Drill Company, Cleveland, Ohio, will be closed down during the holiday season. This is the usual custom of this firm, and during the shut down an inventory is taken and the usual necessary repairs are made. These works have been running full time, but with a reduced number of hands. The concern have a large stock of goods on hand, and will fill all orders promptly during the time their plant is closed.

A scheme is on foot to establish a $30,000 machine shop and foundry at Boyertown, Pa.

The Berry & Orton Company, manufacturers of wood working machinery at Philadelphia, Pa., have made an assignment for the benefit of creditors. It is believed that the liabilities will not exceed $50,000, and that the assets will show a good surplus. The concern started business in 1869 and have never been known to suffer from financial difficulties before.

After January 1, 1894, J. W. Parker & Co., 41 North Seventh street, Philadelphia, who have represented the Ball Engine Company of Erie, Pa., in that city for some years will also act as their representatives in New York City for the sale of Ball engines.

The Helping Hand Engine Company, New Brighton, Pa., have been granted a charter of incorporation. The directors are as follows: Erastus E. Pierce, Walker De Crouch, Frank L. Smith, S. Merrick and J. Frank Mines, all of New Brighton, Pa.

The Westinghouse Electric & Mfg. Company of Pittsburgh have declared the usual semi-annual dividend of 3½ per cent. on the preferred stock, payable January 10, next.

The Fulton Truck & Foundry Company, recently organized at Mansfield, Ohio, have elected directors as follows: C. J. Langdon, W. E. Haycock, Reid Carpenter, R. G. Hancock, M. B. Bushnell, S. N. Ford and W. S. Cappeller.

It is reported that the New Albany Steam Forge & Rolling Mill Company at New Albany, Ind., will resume operations next month after a shut down of over three years.

The Smith & Anthony Iron Foundry at Wakefield, Mass., employing about 200 hands, has closed down indefinitely.

The Lake Shore Iron Works of Marquette, Mich., successfully cast a 60,000 pound fly wheel on the 16th inst., one of the largest castings ever made in the history of that foundry. The wheel is for the pumping engine of the Salisbury mine.

The men employed in the foundry of S. L. Moore & Sons Company, at Elizabethport, N. J., went on strike because some of them were asked to work overtime without extra compensation. The foundry was shut up and the firm posted a notice that work would be resumed with a reduced force and at reduced wages.

The Warren Foundry & Machine Company of Phillipsburg, N. J., closed down December 23 to remain idle until after January 1. A reduction in wages has been announced.

The Cleveland Machine Screw Company of Cleveland, Ohio, announce that the fire which visited their finishing department December 17 is not so serious as reported. They will have no difficulty in repairing the damage at once and expect to be in full operation in the course of a week or ten days.

R. D. Wood & Co.'s pipe and hydrant works at Burlington, N. J., have closed down indefinitely. About 450 men were employed. A member of the firm is stated to have said that Southern iron works have underbid them on several large contracts, so that the plant was forced to close down on account of lack of business. The company's works at Camden and Millville are still running.

The boiler works of the National Water Tube Boiler Company, at New Brunswick, N. J., employing about 100 hands, have made a reduction of 10 per cent. in wages.

Hardware.

The Eagle Mill of the American Screw Company, Providence, R. I., closed down December 19 for an indefinite period. The falling off in the demand for the company's goods has compelled them to reduce their production. Their force of employees has been materially decreased, while the number of working hours has also been reduced. The company had been expecting to resume their usual schedule January 1, but the proposed Wilson tariff bill makes this unadvisable.

At a meeting of the employees of the J. R. Torrey Razor Company, Worcester, Mass., on December 18, Thomas Scales and Joseph Booth were chosen to go to Washington and protest on behalf of the men against the adoption of so much of the Wilson tariff measure as relates to the duty on razors.

The Howe Scale Company, Rutland, Vt., shut down on December 23 for two weeks, during which inventory will be taken.

The proprietors of the Universal Plow Works, Wooster, Ohio, have given notice that their works will be started on January 1 after a three months' shut down. Notice of a reduction of 25 per cent. in

Hosted by Google

wages has also been given. The molders employed by the firm, at a meeting held to consider the matter, decided to refuse to work at the scale offered.

The New Britain Hardware Mfg. Company, New Britain, Conn., have commenced to run six days a week.

The rise in the river has had a very satisfactory effect on the Wheeling nail trade, allowing the mills to clean up their warehouses for the first time in many months. The Laughlin Nail Company are running again after an idleness of six weeks. The La Belle Iron Works are also running full. The two mills give employment to about 1500 hands.

The Howe Scale Company, Rutland, Vt., as assignees of Samuel T. Brady of the same place, inventor, have been granted two patents, one for a platform scale and one for a scale beam.

The Woodbury Whip Company have been incorporated, and have acquired and will continue the whip manufacturing business of Woodbury & Co., Rochester, N. Y. The capital of the company is $150,000. The directors of the company are as follows: John C. Woodbury, J. Wesley Kingston and Charles E. Crouch, all of Rochester.

The True Mfg. Company have been organized at Portland, Maine, for the purpose of manufacturing hose nozzles, couplings, axles, files, wrenches, &c. The capital stock of the company has been fixed at $50,000. Oscar D. Thomas of Brockton, Mass., is president of the company, and Geo. W. Jeffrey, also of Brockton, treasurer.

The plant of the Putnam Nail Company, at Neponset, Mass., was slightly damaged by fire on the morning of the 20th inst. The damage is estimated at $5000. The origin of the fire is unknown.

Bateman & Meany's shear factory in Brookfield, Conn., was robbed of $200 worth of shears on the 17th inst.

The plant of the Cleveland Machine Screw Company, Cleveland, Ohio, was badly damaged by fire on the afternoon of the 18th inst. The factory is a three-story brick building. The blaze was first discovered in the third story of the north wing, and some time elapsed before an alarm was sent in. When the fire apparatus arrived the whole of the upper story was in flames. A second fire alarm was sounded and additional engines responded. By the splendid work of the firemen the flames were confined to the upper floor of the factory. The loss is estimated at $10,000. Repairs will commence at once, and the works will be started up again as soon as possible. The fire was the means of throwing about 100 men out of employment.

The new factory of the McKay Metallic Fastener Company, at Winchester, Mass., is nearly ready. The new shop is built of brick, stone and iron. The main building is 100 x 70 feet and four stories high. An addition will contain the blacksmith shop and other departments. A 200 horse-power engine has just been placed in position and will furnish the power requisite for the operation of the plant. The new shop will supersede the shop now operated at Lawrence, Mass., and many of the machinists who live in that place will remove to Winchester, where houses are being erected to accommodate them. The factory is located on a 15-acre site about 1 mile from the center of the town and on the main line of the southern division of the Boston & Maine Railroad. A station will be erected near the works and the schedule will be so arranged as to permit certain trains to stop there.

As noted in our last issue Wueth Hardware & Mfg. Company, St. Joseph, Mo., will by January 1 be settled in their new six-story premises, 609 to 621 North Second street. At this new location the company will have exceptional facilities in the way of railroad side tracks and switches. Tracks extend into their building, which will enable them to load three cars at one time. They can also unload three or four cars at rear of the building and as many more on the track at the north side of the building. The first floor and basement of the building, which is 130 x 140 feet, will be used for the storage of staple and package goods, such as nails, barb wire, tin plate, &c. On the second floor will be counting and general shipping rooms. The floors above will be used for general storage. The building will be fitted with electric light, electric call bells, speaking tubes and other modern labor saving devices. The company will operate their own electric light and steam plants. By this move the manufacturing interests of the company have been concentrated at 302 and 308 North Second street, while a part of their old premises on Third street will be retained for storage of goods out of season. Notwithstanding the general depression in all lines the past few months the company advise us that they have made preparations for a vigorous campaign the coming year, and will start out January 1 with 35 traveling representatives—22 in hardware, 3 in cutlery and 10 in saddlery goods.

The Bath Harness Company, Bath, N. Y., have purchased the plant and good will of the Fred Moris Company, including their stock of harness, horse collars, &c., and will continue the business, making the same line of goods with the exception of a few changes in the harness, which will enhance the quality and style.

The Ludlow-Saylor Wire Company, St. Louis, are closing the year with a full order book in their art metal department. They are making a number of directory frames for the new 14-story Union Trust Building, St. Louis, and also a number for the Realty Building; also a lot of artistic stair rails for the residence of Fred T. Lock, Birmingham, Ala., and a stair and floor rail for the Eddy office building, Bloomington, Ill.

The H. P. Nail Company, Cleveland, Ohio, advise us that while they have shut down their works they are still doing business as heretofore. They state that they have a good stock of nails on hand, so that they are in a position to take care of such orders as are received from the trade.

Miscellaneous.

On the 13th inst. Judson A. Wann was appointed receiver of the Sun Vapor Light Company of Canton, Ohio. The assets of the concern are said to conist of lighting contracts in various cities, which are regarded as valuable if completed, but on which little would probably be realized if sold at forced sale. The real estate, machinery, &c., of the concern are estimated to be worth $50,000, and the bills receivable and amounts due on contracts at $100,000. The company have a plant at Canton, where lamps are manufactured, and have 72 branches in 15 States in cities where lighting contracts are carried. It is intended, if possible, to make arrangements to continue the business, as it is realized that a shutdown at this time would cause large shrinkage in the principal items of assets. The leading stockholders of the company are members of the firm of C. Aultman & Co., who have also gone into the hands of receivers. The petition for receiver asks for a sale of the plant.

The Manufacturers' Natural Gas Company of Pittsburgh have declared the regular quarterly dividend of one-half of 1 per cent.

About 60 employees of the Sewall Steel Shipbuilding Company, at Bath, Maine, went on a strike because non-union men were employed. The company maintain their right to employ whomsoever they may desire.

The Gilbert Hunt Mfg. Company, with a capital stock of $60,000, have been incorporated at Walla Walla, Ore., to engage in the manufacture of threshing machines and other farm implements.

The Bignall Mfg. Company, one of the largest iron works in the western part of New York State and favorably known throughout the country, closed their doors the night of December 15 for an indefinite period. W. B. Robbins, treasurer of the company, says that owing to the present hard times it is impossible for the concern to continue business, but that up to the time of closing the works had been running on full time and employing the usual number of men.

The Cox Brass Mfg. Company of Albany, N. Y., have elected the following directors for the ensuing year: P. Wendell Parke, John Cox, A. B. Brown and P. F. Gaynor.

The Fort Plain, N. Y., Axle Works have resumed operations after a long shutdown.

The Norwegian Plow Company of Dubuque, Iowa, are erecting an important addition to their buildings. The new structure will be used for a warehouse and offices. A railroad track will run into the building, so that shipping can be done under cover.

Negotiations are pending between Kansas City capitalists and John Wilson of Rock Island, Ill., for the erection at Kansas City of a large plant for the manufacture of agricultural implements.

A factory for the manufacture of metal wheels is to be built at Moline, Ill. It is announced that Deere & Co. and the Deere & Mansur Company, manufacturers of agricultural implements, have arranged for a factory for the manufacture of metal wheels, of which each of the two companies uses a large number annually. They expect to put up a building early in the spring.

Among recently authorized corporations in Illinois are the following: Crystal Machine Company, Chicago; capital stock, $100,000; incorporators, Peter Douglas, Zenas F. Ringer and Harry A. Riddle. The American Gravity Company, Chicago; to make clocks, motors, &c.; capital stock, $1,000,000; incorporators, Henry J. Olney, Samuel L. Smith and Joel L. Squier. Ruble Pressure Blower Company, at Chicago: capital, $1,000,000; incorporators, Peter Hartford, J. L. Hughes and Edgar M. McGauley. The Ruble Blower Company, at Chicago; capital stock, $1,000,000; incorporators, D. J. McMahon, William P. Blue and C. B. Ware. Western Metal Company, Chicago; capital stock, $10,000; incorporators, W. C. Carpenter, Peter Carpenter and J. M. Heath. The National Cutlery Company, with a capital stock of $75,000, were organized at Rockford, Ill., last week. The new company will employ 200 men at the start, and will, it is said, make cutlery by an improved labor saving machine.

Articles of incorporation have been filed by the Williams General Mfg. Company of St. Paul, Minn., with a capital stock of $10,000,000. The business includes the manufacture of electric motors, aluminum wares and the Dent telegraph typewriter. The incorporators are D. H. Kent of St. Paul Park, president, and A. A. Price, vice-president; F. M. Johnson, secretary; P. L. Utley, treasurer, and C. J. Backus, all of St. Paul.

The Wheeler Rail Joint Company have been incorporated at Albany, with a capital of $50,000, to manufacture rail joints in New York City.

It is stated that the Lobdell Car Wheel Company of Wilmington, Del., contemplate establishing a branch works at Raleigh, N. C.

It is claimed that a recent invention of R. R. Turner of Columbus, Ohio, bids fair to solve the smoke abatement problem. A recent test proved its merit as a smoke preventive, and also demonstrated that its use resulted in a considerable saving in fuel.

The Ten Mile Coal & Coke Company, with a capital of $1,000,000, were granted a charter of incorporation under the laws of West Virginia last week. The company have purchased 2800 acres of coal lands near Clarksburg, W. Va., and propose to develop the same in the spring.

The Cambridge Roofing Company are adding new machinery and making improvements, notwithstanding hard times. They have recently placed an order with Geo. C. Keene & Co., Cincinnati, for a stand of corrugating rolls. A corrugating and forming press made by the same company has just been placed in position in the works of the Cambridge company.

The project of utilizing the Cox shoe factory at Fairport, N. Y., as a manufactory for metallic window screens, is being agitated and there is to be a meeting of business men to consider the proposition.

The St. Paul Implement Company of St. Paul, Minn., have filed corporate articles. The business to be carried on is that of dealing on commission in agricultural implements, pumps, &c., and in constructing windmills, pumps and tanks, and in doing a storage and transfer business. The incorporators are Philip S. Hand, William Dawson, Jr., and Edward M. Allen. The capital stock is $50,000.

The Rogers Locomotive Works of Paterson, N. J., continue to reduce their number of employees.

The Iron Car Company, a new organization which supplants the Iron Car Equipment Company, at Huntingdon, Pa., have announced that their works will resume operations at an early date.

The plant of Randolph & Clowes, brass manufacturers, at Waterbury, Conn., closed down on the 23d for one week for the purpose of taking inventory and making minor repairs. The works will reopen January 2 with a prospect for steady work.

Hosted by Google

TRADE REPORT

There have only been surface indications concerning the probable course of events in the near future, and they have fortunately not been of an altogether discouraging character. It is true that work is wanted everywhere, and in the majority of branches it is wanted desperately. But it is a fact also that in some lines business is coming up quite well. Thus it is estimated that contracts for 50,000 to 60,000 tons of Cast Iron Pipe will be closed during the next 30 days, which is a good indication that municipalities are able to raise money. Besides this American shops are figuring on two orders for 23,000 tons in the aggregate for export. All this work will be taken at unprecedentedly low prices, since the leading shops throughout the country are cutting down to the bone.

The tonnage, however, is sure to be welcomed by Pig Iron producers, and is likely to impart tone to at least the Gray Forge end of the market. In Foundry grades a weaker feeling is developing, some of the Southern furnaces being again among the leaders of the anxious.

The latest developments in the Chicago market in Soft Steel Billets are causing uneasiness and indicate that the makers of the Pittsburgh and adjacent districts have succeeded in securing the backing of the railroads, through special rates, in their invasion of that territory.

In Structural Steel there has been relatively little movement. An opportunity has been afforded lately to test in a thorough manner the relative prices in this country and abroad. Specifications for some viaduct work for Japan were submitted some time since. The result of the figuring shows that Continental firms can put the work on board shipping port at as low a figure as it can be made in this country f.o.b. mill of the concern going lowest, down to cost. The freights are so enormously in favor of the foreign mills that the business is out of the question.

Our low prices of Old Material and to some extent of finished goods appear to be growing quite attractive to buyers in Canada. Inquiries from that quarter are becoming quite numerous, and considerable business has already been done in Old Steel Rails. That market deserves some attention. If any slaughtering is to be done let foreign markets get the worst of it.

Something in this direction seems to have been accomplished in Ferromanganese. To judge from shipments made via New York and Baltimore, about 2000 tons of Ferro have gone to England and the Continent since October. The English producers were closed down by the coal strikes. This gave an opportunity to work off a surplus. As a result thereof the English combination for the home market have precipitously dropped their price, which is now near the figure at which they have been willing to sell to this country all along. As a bit of retaliation the little episode is gratifying.

The summary of the new Homestead wages which has been forwarded to us by telegraph is interesting chiefly because it confers further advantages, which may be utilized to hammer the market even more vigorously in the future than in the past.

Pittsburgh.

(By Mail.)

Office of *The Iron Age*, Hamilton Building, PITTSBURGH, December 26, 1893.

Last week was probably the quietest of the year in the Iron and Steel trades and the outlook is that the last week of the year will beat the record in this respect. Very few orders are being received, and these are for small lots and hardly create a ripple on the quiet surface. A good many concerns shut down last week for stock taking and repairs and will remain closed until after the first of the year. It is safe to assume that a number of concerns will find the balance on the wrong side of the ledger when the result of the year's business has been figured out. Prices show no material change, being purely nominal and depending altogether upon the size of the order and the terms of payment. In this connection it is worthy of mention that credit lines are being drawn tighter than ever before, and 30-day settlements seem now to be the rule, instead of the exception, as was formerly the case.

Pig Iron.—The market is absolutely featureless. Buyers are putting off making purchases just as long as they can and when they do go in the market buy only enough to run them a short time. In addition, shipments on old contracts are being deferred to a very great degree by buyers who cannot use the Iron as fast as they expected and do not want to pile it up. Another feature of the situation and an important one is that only a limited number of furnaces have made contracts for Coke, and until more of these have been placed the uncertainty of the future as regards prices will continue. We are not advised of any transactions beyond a few sales of 100 and 200 ton lots, and repeat our quotations of last week as follows:

Neutral Gray Forge	$10.00 @	cash.
All-Ore Mill	10.00 @ $10.25	"
No. 1 Foundry	11.75 @ 12.00	"
No. 2 Foundry	11.25 @ 11.50	"
Bessemer	10.75 @ 11.00	"

Billets.—The past week has been extremely quiet. No large orders have been placed for some time, and, with the exception of an inquiry for 4000 tons for January and February, none are in sight. We note a sale of 400 tons at a price equal to $16 70 at maker's mill. We quote the market at $16.50 @ $16.75 at maker's mill.

Ferromanganese.—We make nominal quotations of $51.50 @ $52, delivered, for 80 % domestic.

Plates and Sheets.—Nothing of interest came up during the week. Three or four of the larger concerns here are fairly busy on small orders. It is expected that after the turn of the year some orders calling for considerable tonnage that have been held back for certain reasons will be placed. Prices are without material change and we quote as follows: Tank Steel, 1.35¢ @ 1.37½¢; Shell, 1.55¢ @ 1.60¢; Flange, 1.65¢ @ 1.75¢; Marine, 1.75¢ @ 1.85¢; Ordinary Fire Box, 1.85¢ @ 1.95¢, and Railroad Fire Box, 2¢ @ 2.15¢. The Sheet trade continues very quiet, but an improved demand is expected early in the new year. We make nominal quotations as follows: No. 24 Soft Steel Sheets, 2.40¢; No. 26, 2.50¢, and No. 27, 2.60¢.

Structural Material.—It is understood that the order for the Beams and Channels for the new building of the Westinghouse Electric & Mfg. Company, at Brinton, which involves considerable tonnage, has been placed. It is hardly necessary to add that Pittsburgh has taken it. A large amount of Iron and Steel products will be used in the construction of these buildings, all of which will doubtless be taken by Pittsburgh makers. While we repeat quotations of last week, it should be noted that these continue to be shaded, according to desirability of order. We quote Beams and Channels up to 15 inches, 1.45¢ @ 1.60¢, according to size of order; Angles and Universal Plates, 1.45¢ @ 1.50¢; Tees, 1.70¢ @ 1.75¢. A large buyer claims to have placed an order for Universal Plates recently at 1.25¢ at mill.

Muck Bars.—We continue to quote $20.50 @ $21, delivered at buyer's mill, for standard grades. Off grades of Muck Bars are offered here at prices considerably lower than the above.

Rails.—It is claimed that some business is in sight and will be placed early in the year. Prices are on the basis of $24 at mill for standard sections.

Bars.—The condition of the Bar Iron trade is extremely unsatisfactory and the outlook for any improvement to come soon is far from encouraging. The demand is very light, and with the mills all anxious to get orders, prices have been forced to a point that certainly precludes any profit to the maker. While it is true that both labor and fuel are materially lower, it is more than probable that this saving has been more than offset by the reduced prices at which business has recently been placed. It is intimated that the Valley mills will ask for a further reduction in boiling sufficient to put them on an equal basis with non-union mills in the Pittsburgh district. We quote Soft Steel Bars at 1.30¢, with Bar Iron extras. Iron Bars may be quoted at 1.25¢ @ 1.30¢, at Valley mills, half extras.

Wire Rods.—We quote at $24 @ $24.50 at maker's mill. The falling off in the demand for Wire Nails has similarly affected the demand for Rods to some extent.

Merchant Steel.—While the demand is restricted, makers expect an improvement in this direction early in the year, when consumers have completed repairs and stock taking. Prices continue low and are ruling as follows: Bessemer Machinery at 1.50¢; Open Hearth Machinery, 1.75¢; Machine Straightened Tire, 1.65¢; Sleigh Shoe, 1.80¢ @ 1.90; Toe Calk, 1.95¢ @ 2.05; Open Hearth Spring, 1.85¢ @ 1.90¢; Tool Steel, 5½¢ and upward, according to quality.

Skelp Iron and Steel.—The demand continues very light, with prices ruling about as follows: Grooved Steel Skelp at 1.10¢ @ 1.15¢; Sheared, 1.20¢ @ 1.25¢; Grooved Iron Skelp, 1.30¢ @ 1.35¢; Sheared, 1.45¢ @ 1.50¢.

Wire Nails.—The demand continues light, although the recent declines in prices have stimulated buying to some extent. It is believed that after the first of the year there will be a material improvement in demand, as it is known that some large buyers are holding off placing orders until next month. We quote Wire Nails at $1.10 @ $1.15 in carload lots, according to order. For less quantities $1.25 @ $1.30 is obtained. Cut Nails may be quoted at 95¢ at mill for carload lots with the usual averages.

Barb Wire.—This trade is feeling the effects of some very low prices made

Hosted by Google

by certain mills, but which other mills more favorably situated have declined to meet. The demand is light, but has been strengthened somewhat by the recent low prices referred to above. We quote Four-Point Galvanized at $2.15 in carload lots. It is claimed that this price has been materially shaded in some recent transactions. Painted may be quoted at $1.75 in carload lots and Plain at $1.40 in same quantities.

Connellsville Coke.—This week we reduce our quotation on Furnace Coke to $1.05 ℔ ton of 2000 lb, f.o.b. cars in Connellsville region. This price is being openly named by the producers and it is claimed has been shaded a few cents on some contracts recently made for Furnace Coke for delivery during the first half of 1894. The established prices on Foundry Coke of $1.30 to dealers and $1.45 to consumers are not being observed, but are being freely shaded. For the week ending December 16 there were 8430 ovens in the Connellsville region active and 9083 idle, with a total estimated production for the week of 80,385 tons.

Chicago.

(By Telegraph.)

Office of *The Iron Age*, 59 Dearborn street, CHICAGO, December 27, 1893.

Pig Iron.—Local Coke is in comparatively good demand. The usual carload trade is moving and a few contracts have been made for delivery the early months of next year, while the prospects are favorable for much more business of the same character. The Sidney Furnace is now in blast, having started on the 11th. Southern Iron is quiet and Lake Superior Charcoal seems neglected. Quotations are now as follows for cash:

Lake Superior Charcoal.....	$15.50 @ $16.00
Local Coke Foundry, No. 1...	13.00 @ 13.50
Local Coke Foundry, No. 2...	12.50 @ 12.75
Local Coke Foundry, No. 3...	12.00 @ 12.50
Local Scotch.....	13.50 @ 14.00
Ohio Strong Softeners No. 1..	15.50 @ 16.00
Southern Silvery, No. 1.	@ 13.75
Southern Silvery, No. 2	@ 13.25
Southern Coke, No. 2..... ...	12.15 @ 12.40
Southern Coke, No. 3	11.65 @ 11.90
Southern, No. 1, Soft.....	12.40 @ 12.65
Southern, No. 2, Soft.....	11.65 @ 11.90
Tennessee Charcoal, No. 1...	16.00 @ 16.50
Southern Gray Forge.....	10.60 @ 10.85
Alabama Car Wheel.....	18.25 @ 18.50
Jackson County Silvery.....	16.00 @ 16.50
Other Ohio Silvery.....	15.00 @ 15.50

Bars —Within the past few days a better inquiry is perceptible for both Iron and Steel Bars, but the inclination of buyers seems to be still more strongly in favor of Steel. The very low prices now prevailing for Steel Billets are enabling the ordinary Bar mills to turn their attention more and more to Steel, and they prefer to roll it. Current quotations from near by mills are from 1.30¢ to 1.35¢, Chicago, for either Iron or Soft Steel, but these prices are shaded on good specifications. Some lots from stock are selling at 1.55¢ @ 1.65¢, according to quantity.

Structural Material. — The announcement was premature that the contract for the Milwaukee Viaduct had been awarded. Action remains to be taken by the City Council to make the matter official. The week has been quiet in Building and Bridge Material, although a considerable amount of business is in sight. Quotations are as follows, Chicago delivery: Beams, 1.65¢ @ 1.75¢; Tees, 1.90¢ @ 2¢; Angles and Universal Plates, 1.60¢ @ 1.65¢. Small lots are sold from stock at an advance of 10¢ @ 15¢ ℔ 100 above these prices.

Plates.—A moderate business has been done in small lots from mill and from stock. Mill shipments, Chicago delivery, are quotable as follows: Tank Steel, 1.55¢ @ 1.65¢; Shell Steel, 1.75¢ @ 1.85¢; Flange Steel, 1 95¢ @ 2.05¢; Fire Box, 2.75¢ @ 5¢. Store prices now prevail as follows: Iron or Steel Sheets, Nos. 10 to 14, 2¢ @ 2.10¢; Tank Steel, 1.90¢ @ 2¢; Shell Steel, 2 20¢ @ 2.40¢; Flange Steel, 2.50¢ @ 2.65¢; Boiler Tubes, 70 and 5 % off.

Sheets.—Black Sheets are dull, with prices unchanged at 2.65¢ @ 2.70¢, Chicago, for mill shipments of No. 27 Common Iron, with the price of Steel Sheets approaching more closely to that of Iron. Small lots from stock are selling at 2.90¢ @ 3¢ for Iron. Large inquiries are in the market for Galvanized Iron, while prices are a little weaker. Mill shipments of Juniata are quoted at 75 and 5 % off, while small lots from stock sell at about 70 and 10 % Sheet Copper is fairly firm at 25% @ 30 % off, according to quantity.

Merchant Steel.—Nothing new has transpired in this line, and quotations are unchanged.

Billets. —Freights from Eastern points of shipment have evidently been cut recently, as very low prices have been made by Western Pennsylvania and Ohio works for delivery at Indiana mills and other consuming points in this territory. Nominal prices are unchanged at $19.25 @ $19.50, Joliet, but actual rates depend on the competition which has recently developed.

Rails.—Considerable tonnage of Steel Rails has been entered for next year, but the quantity is not as large as for previous years at this time. Individual roads, however, are placing contracts for about the same tonnage as before. Prices are firm at $25 @ $27, according to quantity. Splice Bars are unchanged at 1.55¢ @ 1 60¢; Track Bolts with Hexagon Nuts, 2 55¢ @ 2.60¢ and Spikes, 1.90¢ @ 1.95¢.

Old Rails and Car Wheels.—No new business has transpired under this head.

Scrap.—Business is extremely dull and quotations are unchanged: No. 1 Forge, $11; No. 1 Mill, $8.25 @ $8.50; Sheet Iron, $4.50; Pipes and Flues, $8; Axles, $16; Horseshoes, $11; Fish Plates, $12; Spikes and Bolts, $10; Cast Borings, $4.50; Wrought Turnings, $6.50; Axle Turnings, $8; Heavy Cast, $9 50; Stove Plate, $7.75; Malleable Cast, $8; Mixed Steel, $7, gross ton; Leaf Steel, $14 50.

Metals.—Lake Copper is quoted at 11¢ for carloads, and Casting Copper at 10¢, but the demand is very light. Spelter is weak, and offers have been made by sellers down to 3.40¢ without inducing business. Lead is firmer and is now quoted at 3.10¢, but very little business is doing.

Rogers, Brown & Merwin, dealers in Pig Iron, Steel and Coke, Monadnock Block, Chicago, have issued a very pretty wall calender for 1894. In connection with it they have distributed an interesting circular entitled "Forecast of 1894 in the Light of Past Records," in which they predict a substantial increase in the consumption of Pig Iron.

Andrew Hawthorne has been appointed Chicago representative of Matthew Addy & Co. of Cincinnati, succeeding W. C. Hayward. The office of the firm has been retained in The Rookery.

Charles H. Hawkins, 205 Western Union Building, Chicago, agent for the Brown, Bonnell Iron Company, has distributed among his patrons a daily memorandum calender for 1894, which forms a very convenient article for desk use.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St., PHILADELPHIA, Pa., December 26, 1893.

Pig Iron.—So far as new business is concerned there is practically none, everything being closed for the year or as near to it as possible. What the coming year will bring with it is an unsolved problem, and as regards the Iron trade there appears to be no data upon which to attempt its solution. All that is positively known is that prices are at the lowest on record, while the demand is relatively smaller than ever before. On general principles it is supposed that there must be a change soon, but how or when it is to come no one appears to know, and in the sense that there is no inclination to break away from the monotony, it may be said that no one seems to care. Usually when prices are known to be down to cost, or below it, there is a good deal of investment buying and things get a start in that way, but with the exception of a few lots of Pig Iron, variously stated at 25,000 to 60,000 tons, nothing of that kind has been developed. Assuming that 60,000 tons has been so taken the total cost would still be less than $500,000, which cannot be considered a very extensive operation. Apart from this consumers have shown very little interest in the market. Some have bought to cover the first three months' requirements, but the majority are taking hand to mouth lots, which, in fact, corresponds with their orders; that is to say, they have no orders of any account except such as are sent in from day to day. On the other hand, sellers are not particularly anxious to fill their order books at such prices as the market would afford, so that there is a tacit understanding on both sides to let the market take its course. The collapse of the Crane Iron Company is no surprise to any one and is not likely to have any very serious results. The total stock on hand is less than 8000 tons of all grades, largely Bessemer and misfit Iron, and as there is no probability of its being forced on the market, there is no danger in that direction, and in any case the quantity is too small to do much harm. As regards to-day's prices, it cannot be said that there is any change from last week, but the market is so narrow that it is impossible to form any very definite opinion, although the chances are that on the right kind of offers good buyers could obtain concessions. It will take a week or two to test the position, but the feeling is anything but confident or hopeful.

Steel Billets —No demand at all. Bills of $19, delivered to near by mills, have been asked for, but as there is no immediate use for the article consumers make no response.

Finished Material.—Prices are no better, but as there is no business to make it worth while to quote lower figures, the market may be called unchanged. At the same time manufacturers are pretty well convinced that if they wish to secure such business as there is they must keep very close to bottom figures, and if the inquiry is for anything fairly attractive they must

Hosted by Google

do even better than that. Competition is closer than ever, and as there seems to be no immediate prospect of improved demand it is not unlikely that 1894 will start in at lower figures than any that were accepted in 1893. The great want is more business; buyers' wishes could be met in regard to prices. All the mills are hungry for work, but there is very little prospect of its being forthcoming for a while at all events.

Cincinnati.

(By Telegraph.)

Office of *The Iron Age*, Fifth and Main Sts., CINCINNATI, December 27, 1893.

There has been practically no business in the Iron market during the week, there being no inquiry for large lots for either present or forward delivery, and even the jobbing foundries have taken very few single carload lots either in this district or in the East. The tone of the market is weak, and especially for foundry grades of Coke Iron; and while there is little urgency to sell, there are indications cropping out now and then which indicate a desire on the part of some furnaces to secure orders, but Gray Forge is in a firmer position, for it is more generally well sold in advance of production. The shipments of the furnaces on old orders have been less liberal this week, and the melting of Iron appears to be much reduced, so many consumers have already contracted for Iron enough to last them much longer than they anticipated and will not be in the market for many weeks. The price of No. 1 Foundry Coke is $9; No. 2 do., $8; No. 3 do., $7.50; and Gray Forge, $7 ℔ ton, f.o.b. Birmingham. Charcoal Irons are merely nominal. Quotations are as follows:

Foundry.

Southern Coke, No. 1	$11.75 @ $12.00
Southern Coke, No. 2	10.75 @ 11.00
Southern Coke, No. 3	10.25 @ 10.50
Ohio Soft Stone Coal, No. 1	15.50 @ 16.00
Ohio Soft Stone Coal, No. 2	14.50 @ 14.75
Lake Superior Coke, No. 1	15.00 @ 15.25
Lake Superior Coke, No. 2	14.00 @ 14.25
Hanging Rock Charcoal, No. 1	18.50 @ 19.00
Hanging Rock Charcoal, No. 2	17.50 @ 18.00
Tennessee Charcoal, No. 1	14.00 @ 14.25
Tennessee Charcoal, No. 2	13.00 @ 13.25

Car Wheel and Malleable Irons.

Standard Southern Car Wheel	17.75 @ 18.00
Lake Superior Car Wheel and Malleable	17.00 @ 17.25

Forge.

Gray Forge	9.75 @ 10.00
Mottled Coke	9.50 @ 9.75

St. Louis.

(By Telegraph.)

Office of *The Iron Age*, Bank of Commerce Building, ST. LOUIS, December 27, 1893.

Pig Iron. — The demand during the past week has been remarkably light, and prices are weaker in consequence. There is no buying of any consequence for forward delivery, consumers having evidently concluded that prices will go even lower than at present quoted. The outlook is not encouraging, and a lower range of prices will soon be in order. We quote as follows for cash, f.o.b. cars St. Louis:

Southern Coke, No. 1 Foundry	$13.25 @ $13.50
Southern Coke, No. 2 Foundry	11.50 @ 11.75
Southern Coke, No. 3 Foundry	10.75 @ 11.00
Southern Gray Forge	10.25 @ 11.50
Southern Car Wheel	17.25 @ 18.25
Lake Superior Car Wheel	16.50 @ 17.00
Ohio Softeners	16.00 @ 16.50

Bar Iron.—There is very little business doing in Bar Iron, and prices continue weak and unsettled. Mills quote 1.35¢, half extras, f.o.b. St. Louis, which prices would be shaded for large quantities. Jobbers continue to quote 1.70¢ @ 1.80¢, according to quantity.

Barb Wire.—The sales of Barb Wire have dwindled down to almost nothing, and prices are weaker and quoted lower. Mills quote Painted at $1.90, Galvanized at $2.30, and carload lots 5¢ ℔ hundredweight less.

Wire Nails.—According to the reports, Nails are being given away almost at $1.30. Some sales have been made, but buyers' views do not get much beyond $1.20.

Rails and Track Supplies.—There is no improvement to note in this department and prices are unchanged, as follows: Splice Bars, 1.65¢ @ 1.70¢; Spikes, 1.95¢ @ 2¢; Bolts, Square Nuts, 2.40¢; with Hexagon Nuts, 2.50¢; Links and Pins, 1.85¢ @ 1 90¢. Old Iron Rails are unchanged at $13.50. Steel Rails are inactive at $26.50 @ $27.

Pig Lead. —It seems impossible to sell this metal even at to-day's low prices. Consumers refuse to buy, and state that even at lower prices they are not in the market at this time. A few carloads have changed hands at 3¢ @ 3.05¢.

Spelter.—At 3.40¢ there is little or no business doing and with the exception of an occasional carload order there is practically nothing doing.

Financial.

The end of the year 1893 is of a piece with its past unfortunate record. Its closing weeks have witnessed further disasters in the financial world, of sufficient magnitude to stamp any ordinary period as particularly calamitous. Within the past few days the failure of the St. Nicholas Bank of New York City, the declared bankruptcy of the Atchison, Topeka & Santa Fé Railroad and the hourly anticipation of a similar eventuality in the New England road, together with the increasing unfavorable returns of railroad earnings for the present month, have all contributed to give a rude shake to confidence and to depress the spirits of the business community. Usually at this season the disposition is shown in Wall street to contract operations in order to adjust accounts, and this causes a lull in business during the holiday period. But at the present time these features are more strongly marked than ever before. Except in a few stocks, and in cotton, speculation is absolutely stagnant, while general trade is far below the average.

The financial world and the business community generally await with great interest and considerable nervousness the developments likely to occur on and after the dreaded 1st of January. The inability to obtain funds to meet obligations then due has been the main cause of the recent large failures, and this may operate to bring down further concerns similarly placed; for, notwithstanding the plethora of money in the banks, bankers, in view of the expected strain of the January settlements on the commercial community, are using considerably more discrimination in the matter of collateral for loans, while they show great conservatism in the purchase of commercial paper. In a word, the year closes gloomily. Trade and industrial reports indicate extremely dull business, nor can any improvement be looked for until after the turn of the year. Many concerns close for the holidays under ordinary conditions, but the number of them so suspending operations this season is larger than usual, and with many of them it seems to be a question whether they will reopen after the new year begins or remain indefinitely idle.

Railroad earnings reported for the second week of December show an increasing ratio of loss over those of the last few years, in spite of rigid economies in working expenses. According to the *Financial Chronicle* the earnings of 69 roads for the first and 57 for the second week of December show a loss of 12.2 %. *Dun's Review* for about the same number of roads exhibits a loss of 13 % in trunk lines, 24.5 % on Western "granger" roads, 14 % on other Western, and somewhat less on Southern and Pacific roads. The failures of the week number 344 in the United States, as against 285 last year, and include several of importance, the total liabilities exceeding $6,220,000 in amount. The returns of the bank clearing houses give little or no evidence of any improvement in business activity. The figures of seven of the leading cities show an average decrease, compared with last year, of 32.6 %.

The weekly statement of the Associated Banks, issued on Saturday, shows a further accumulation of currency at this center. The amount of surplus reserve increased $1,768,950, the total now standing at $78,000,000. Loans expanded only $865,100, an unfavorable sign, which indicates a check to reviving enterprise. It is pointed out that the loans now stand $82,500,000 below the deposits, "which shows still an extraordinary disparity between the wants of borrowers and the abilities of the banks to lend." Money on call continues extremely easy on a 1 % @ 1½ % basis, with more noticeable activity in the demand. Renewals generally rule at the same rate. Time loans on good stock collateral are in abundant supply at 2 % @ 2½ % for short loans and 3 % @ 3½ % for longer terms.

Mercantile paper is dull, in consequence of the scarcity of first-class offerings. Such lines of good grade as come into the market are readily absorbed. The current rates are 3½ % @ 4 % for indorsed bills receivable, 3¾ % @ 4¼ % for choice single names, and 5 % @ 5½ % for names not so well known.

Preparation for the Christmas holidays and the general torpidity of speculation marked the close of last week as particularly dull and heavy in the Stock Exchange. The failure of the St Nicholas Bank, although having little immediate effect on an already depressed market, gave an added element of discouragement, the uneasiness being intensified by disquieting rumors regarding the Atchison and New England railroads, the stocks of which broke heavily on Friday and Saturday. Other railroad issues fell in sympathy, the market closing feverish on Saturday, with evidence of considerable selling on the part of frightened stockholders. Monday's holiday was succeded by a somewhat larger volume of trade on Tuesday, notwithstanding the absence of London business. The interest centered mostly in Atchison and New England securities, announcement having been made of the collapse of the former railroad, and indications pointing to the certainty of a similar result for the latter. Heavy liquidation oc-

Hosted by Google

curred in both cases, New England, especially, falling to panic prices; and other railroad and industrial stocks being more or less affected. The market closed weak and feverish, with a downward tendency in prices. The following list shows the extreme fluctuations of the more active stocks during the week, with closing prices on December 27:

	Highest.	Lowest.	Closing, Dec. 27.
Am. Sugar Ref.	83⅜	79⅜	81⅛
Atchison, T. & S. Fé.	17⅛	13	13¾
Balt. & Ohio	71	68	68½
Chicago Gas	64	60	61⅞
Chic., B. & Q.	76¾	73¼	74¾
Chic., Mil. & St. Paul	60	56⅞	58
Chic., Rock Isl. & Pac.	67	63	63⅛
Del. & Hudson	130¼	127½	129½
Del., Lack & Western	161½	157¾	162½
Gen. Electric	37¾	31¼	33
Lake Shore	123½	121⅝	123
Louisville & Nashville	49	43¼	43⅞
Manhattan	126¾	122	122½
Missouri Pacific	22¾	21	21¼
National Lead, Common	23¼	21⅝	22½
New Jersey Central	115½	112	112
New York Central	100	97¾	98¼
N. Y., L. E. & Western	14⅞	14⅛	14⅛
N. Y. & New England	22½	12	13¼
Northern Pacific, Pfd.	20¼	18⅝	19
Philadelphia & Reading	19	17	17⅜
Richmond & West Pt., Terml	2⅝	2½	2⅝
St. Paul & Omaha	37	34½	34½
Union Pacific	19⅝	17¾	18
Western Union	85	81	82¼

Government bonds have been dull and steady, with small sales on Tuesday of the 4s at 114 for the coupon and 113 for the registered bonds. The latest quotations were as follows:

	Bid.	Asked.
2s, 1891, registered	95	.....
4s, registered	112¾	113¾
4s, coupon	114	114¾

A considerable decline has occurred in the demand for railroad and miscellaneous bonds for investment. The market has been weaker, and in most issues prices have declined. Atchisons depreciated materially in value on the notice of the receivership, and general business has been light.

Sterling exchange has been dull and somewhat weak. An accumulation of commercial bills on Tuesday was fairly met by the demand for remittances, but the London Exchange being closed little foreign business was done. Rates are slightly lower than those ruling last week. Actual business was done at the close yesterday at 4.83½ @ 4 84½ for 60 days, 4.85⅓ for demand, 4.86 for cables and 4.82½ @ 4.82⅝ for commercial.

Domestic exchange on New York is quoted as follows: New Orleans, commercial 125 discount, bank par; Charleston, buying $\frac{1}{16}$ discount, selling $\frac{1}{16}$ premium; San Francisco, sight 10, telegraph 15 premium; Savannah, buying ⅛ discount, selling par @ ⅛ premium; St. Louis, 50 premium; Chicago, 80 premium.

Bar silver closed in London on Wednesday at 32⅛ pence, and in New York at 69½¢ per ounce, a fall of $\frac{3}{16}$ penny and 1 cent, respectively, from the prices reported last week.

A part of the famous collective exhibit of the Swedish iron and steel works at the World's Fair is now being exhibited by N. Lilienberg of 150 Broadway, New York, at the Grand Central Palace. It embraces the articles shown by the Söderfors and Osterby works. The former make pig, Walloon and Lancashire bars and particularly open hearth steel and castings. The Osterby Works produce the famous Dannemora Double Bullet bars, blister and shear steel, and make the line of Dannemora and Dora crucible steels, the latter including tungsten steel. Mr. Lilienberg also shows the Wanner flexible steel wheel.

Metal Market.

Copper.—Business has been of distinctly routine character and the demand at present is extremely tame. The offering is also reserved, and, except on Metal Exchange contracts, prices below those named by the leading producers or their agents are extremely few and far between. There is, however, enough of what is commonly termed "outside" offering to keep values in more than usually uncertain form. Fair quotations appear to be about 10⅜¢ @ 10½¢ for Lake Superior Ingot, 9¾¢ @ 10¢ for Electrolytic and 9½¢ @ 9¾¢ for ordinary casting stock, according to brand and delivery.

Pig Tin.—Prices have remained almost stationary and the market is still bare of distinctly new feature, since speculation is virtually at a standstill, while consumers' purchases, to all accounts, are barely up to the average for the season. Steady inroads are being made upon jobbers' stocks, however, and free or unbonded stocks are in such shape that it is difficult to buy lots of 10 tons or more at 20.55¢ @ 20.60¢ for delivery this month or next.

Pig Lead.—Prices have been moved a little higher, but the leading brokers note no sales of importance and profess to be ignorant of any conditions that should bring about an increase in the value of the metal. In other quarters it is intimated that the advance is purely speculative, and that the speculative backing to the market is of very doubtful endurance. For the present 3 25¢ upward is quoted for ordinary Western brands in carload or larger lots.

Spelter.—Dealings have been on a very moderate scale. The demand has continued moderate also. While not particularly large, the offering has proven sufficient to keep prices rather soft at about 3.70¢ @ 3.75¢ for common, 3.80¢ for prime and 3.85¢ @ 3 90¢ for choice brands in carload or larger lots.

Antimony.—Except of small parcels there are few sales making and prices are easy, with 9½¢ @ 9¾¢ quoted for Hallet's, and 10¢ @ 10¼¢ for Cookson's, as to size of lot.

Tin Plate.—There has been hardly any buying of late and the demand at present is extremely tame. Prices are somewhat soft on both prompt and future deliveries, but show no radical changes. Spot quotation are as follows: Coke Tins—Penlan grade, IC, 14 x 20, scarce; J. B. grade, do., $5.30; Bessemer full weight, $5.30; light weights, $4.85 @ $4.90 for 100 lb, $4.80 for 95 lb, $4.62½ for 90 lb. Siemens Steel scarce. Stamping Plates—Bessemer Steel, Coke finish, IC basis, $5.60; Siemens Steel, IC basis, $5.65; IX basis, $6.75 @ $6.80. Charcoals—Melyn grade, IC, $6.35; Crosses, $7.87½; Allaway grade, IC, $5.60; Crosses, $6.75; Grange grade, IC, $5.75; Crosses, $6.85. Charcoal Ternes—Worcester, 14 x 20, scarce; do., 20 x 28, $11.35; M. F., 14 x 20, $7.35 @ $7.37½; do., 20 x 28, $14.75; Dean grade, 14 x 20, $5.35; do., 20 x 28, $10.50 @ $10.60; D. R. D. grade, 14 x 20, $5.15; do., 20 x 28, $10.10; Alyn, 14 x 20, $5.35; do., 20 x 28, $10.50; Wasters—S. T. P. grade, 14 x 20, $4.75; do., 20 x 28, $9; Abercarne grade, 14 x 20, $4.60; do., 20 x 28, $8.87½.

New York.

Office of *The Iron Age*, 96-102 Reade street, New York, December 27, 1893.

Pig Iron.—Current business is very light, nor is any movement expected in the near future. Considerable work is coming up for the Pipe foundries in New England and locally. Contracts at Providence recently taken were at very low prices. We quote: Northern brands, $13.75 @ $14.50 for No. 1; $13 @ $14.25 for No. 2; $12 @ $12.50 for Gray Forge, at tidewater. Southern Iron, same delivery, $13 @ $14 for No. 1; $12 @ $13 for No. 2; $11.50 @ $12.25 for No. 3; $11.75 @ $12.25 for No. 2 Soft, and $12.25 @ $12.50 for No. 1 Soft. Gray Forge is $11.25 @ $12.

Ferromanganese.—It appears that since October shipments from New York and Baltimore have been made to English, Scotch and Continental ports to the aggregate amount of about 2000 tons, the seller being a Pittsburgh concern. It is supposed that the sales were made to clear up a surplus and were made possible through the fact that the English furnaces were idle on account of the coal strike, and then the European market was held up through a combination. It is estimated that $46 is what they netted to the American producers. The English furnaces, which are now about to start again, have put down their home prices (which have been considerably above their export price) to exclude further American imports. It is quite clear that, under the circumstances, American producers have full control of this market, and that foreign Ferromanganese has little chance for the present unless foreign manufacturers make very favorable contracts. We quote: Spiegeleisen, 10 % @ 12 %, $21.50 @ $22, and 20 %, $25.50 @ $26, on cars, Jersey City.

Billets and Rods.—This market is exceedingly dull. We quote nominally: Domestic Billets, $19.25 @ $22, and foreign Billets, $28 @ $28.50, tidewater; domestic Wire Rods, $26 75 @ $28, and foreign Rods, $39 @ $39.50, tidewater.

Steel Rails.—No new business of any consequence has been taken in this territory, which is pretty well cleared of all important orders from the larger lines. We continue to quote $24.80 at tidewater.

Track Material.—We quote as follows for small lots: Spikes, 1.70¢ @ 1.90¢; Fish Plates, 1.25¢ @ 1.40¢; Track Bolts, Square Nuts, 2.10¢ @ 2.40¢, and Hexagon Nuts, 2.30¢ @ 2.50¢, delivered. Concessions would be made for round lots.

Manufactured Iron and Steel.—The week has been exceedingly dull and no transactions of any consequence have taken place. For the immediate future little new work is offering. Manufacturers complain that specifications are coming in tardily. Thus the Brooklyn Bridge terminals have not yet been given out. Foreign Beams are offered at figures even lower than any recorded thus far. We quote nominally: Beams up to 15 inch, 1.65¢ @ 1.80¢, 20-inch, 1.80¢ @ 2¢, 24-inch, 2¢ @ 2.25¢, for round lots; Angles, 1.55¢ @ 1.75¢; Universal Mill Plates, 1.50¢ @ 1.65¢; Tees, 1.75¢ @ 2¢; Channels, 1.65¢ @ 2¢, on dock. Steel Plates are 1.45¢ @ 1.60¢ for Tank; 1.60¢ @ 1.90¢ for Shell; 1.90¢ @ 2.15¢ for Flange, and 2.25¢ @ 2.80¢ for Fire Box, on dock; Refined Bars are 1.45¢ @ 1.9¢, on dock, and Common 1.35¢ @ 1.50¢; Soft Steel Bars are 1.45¢ @ 1.70¢; Scrap Axles are quot-

Hosted by Google

able at 1.65¢ @ 2¢, delivered; Steel Axles, 1.65¢ @ 1.90¢, and Links and Pins, 1.65¢ @ 1.80¢; Steel Hoops, 1.70¢ @ 1.90¢, delivered; Cotton Ties, 70¢ @ 72½¢ ℔ 45-lb bundle, at mill; Machinery Steel, 1 45¢ @ 1.50¢; Toe Calk, 1.90¢ @ 2¢ and Sleigh Shoe, 1.65¢ @ 1.75¢, delivered.

British Iron and Metal Markets.

[*Special Cable Dispatch to The Iron Age.*]

LONDON, WEDNESDAY, December 27, 1893.

Pig Tin prices have varied in a very slight degree only, and business in the metal has been on a very small scale, chiefly in forward deliveries. That the undertone is rather weak has, however, been evidenced in the fact that prices softened upon the least sign of pressure, and there seems also to be a fear that heavy supplies in the immediate future will have some adverse influence. In any event, buyers are holding off and awaiting developments. The market at the close was £74. 15/, with Straits quoted at £75. 12/6 for prompts, and £76. 15/ @ £77 for three months futures.

Copper prices have varied in a very moderate degree only, or between £43 and £43. 2/6 for Merchant Bars, for prompt delivery, and business has continued on a very moderate scale, with hardly any outside speculative interest manifested. Latest dealings were at £43 for Merchant Bar prompts, £43. 10/ for futures and £46. 10/ @ £46. 15/ for Best Selected English.

Tin Plate has met with slow sale and the negotiation is at present of strictly holiday season character. Prices are still rather weak but not absolutely lower. Liverpool quotations are as follows:

IC Charcoal, Alloway grade.....12/3 @ 12/9
IC Bessemer Steel, Coke finish. ...11/3 @ 11/6
IC Siemens " " " .....11/6 @ 11/9
IC Coke, B. V. grade, 14 x 20.....11/3 @ 11/6
Charcoal Terne, Dean grade.....10/9 @ 11/

Pig Lead has undergone hardly any change in price and the market is still rather uncertain in tone, with £9. 10/ generally quoted for soft Spanish, prompt delivery.

Spelter has fluctuated in price to a moderate extent only, and the market remains bare of distinctly new feature. Present quotations are on the basis of £16. 12/6 for ordinary Silesian.

In the market for Iron and Steel there is nothing to note except that business has been on a very moderate scale and that movements in prices have continued narrow. Last transactions in warrants were at 43/5 for Scotch, 35/6 for Cleveland, and 45/6 for Hematite.

The London *Iron and Coal Trades Review* states that C. B. Holland is now in this country inquiring into the affairs of the Otis Steel Company of Cleveland, with a view to reorganization.

The many friends of John Fritz of Bethlehem, Pa., will learn with some solicitude that he has been seriously ill. The latest news is of a more favorable character.

The Homestead Wages.

(*By Telegraph.*)

The new wage scale of the Homestead Steel Works, which goes into effect January 1, contains even greater reductions than at first supposed. They range from 10 to 65 per cent., and considerable dissatisfaction has already been expressed by the men who suffer most, but no strike is expected. The heaviest reductions are in the 119-inch plate mill, and the new and old prices are as follows. The prices given are for 100 tons: Roller, new rate, $6, old rate, $12.75; screw down, new, $3.70, old, $9.75; tableman, new, $3.20, old, $6.95; hookers, new, $2.75, old, $6.08; sweeper, new, $2.27, old, $3.45; heaters, new, $5.25, old, $9.75. On the following jobs the new rate is as follows: First shearman, $4.09; second shearman, $3.41; first leader, $2 95; second leader, $2.56; lever pullers, $2.36; helpers, $2.27. By way of partial equalization for these cuts a readjustment of positions has been made which will make it possible for the men to make better wages than they would otherwise, but by much harder work. Instead of three eight-hour turns, as previously, there will be two turns of 12 hours each and some men will be dispensed with and others allowed to make their tonnage. Instead of two heaters on a turn having three furnaces each, with one helper, there will be only one heater, who will have all the six furnaces and two helpers. This releases four out of six heaters from their positions and the two who are left will probably make as much as formerly, even at a reduction of nearly 50 per cent. The capacity of the 119-inch mill has been put at 100 tons to a turn of 8 hours, but it is said that it only averages about 80. With a 12-hour turn it is expected to exceed 100 tons.

In the 32-inch mill, which is the armor plate mill, the reduction is said to average 40 per cent. on all the high priced men and to be very slight on all who get low wages. The following figures were obtained: Roller, new wages, $2 per 100 tons, which is about $4 a day, old wages, $150 a month; heater, per 100 tons, new rate, $2 50, old, $3.47; first helper, new, $1.60, old, $2.66; second helper, new, $1.10; bottom maker, new, $1.50, old, $1.60; chainman, $1 15, no change; broom off, new, $1, old, $1.08; tongsman, new, $0.95, old, $1.08; roll tablemen, new, $1.30; old, $1.39; regulators, new, $0.70, old, $0.77, and shear tablemen, new, $1.20, old, $1.28. The armor plate mill operates on 12-hour turns, as do all the other mills except the 119-inch mill. Its average capacity is about 200 tons a turn, and it has made as high as 350 tons.

The principal other departments in the Homestead Steel Works are the 10, 23, 28, 33, 35 and 40 inch mills, which are all operated principally upon structural steel, the two open hearth steel departments and the converting departments. On all the structural mills the cuts are said to range from 10 to 40 per cent. None of the rollers got off with less than a 25 per cent. reduction. The blowers in the converting mill have been changed from a salary of $125 a month and put on tonnage at $1 per 100 tons. They can make about $3 a day at this rate. The change in the wages of melters in the open hearth departments is about the same. Lower paid men of both classes are not cut so heavily. The wages of all foremen, blacksmiths, machinists, pipe fitters and all other classes of skilled day labor are cut on an average of 10 to 12 per cent Common labor in the mills is reduced from 14 cents to 11 cents an hour. No reduction has been announced in the wages of pick and shovel laborers, who now get $1.20 a day. The scale is not based on any product of the plant and is consequently an individual agreement. Wages will not be affected by declines or advances in the selling prices of any of the various products of the Homestead plant. With this new scale in force the concern will be in position to compete more successfully than ever before, and will probably have a material advantage over many of their competitors in cost sheets.

Trade Publications.

THE ZUCKER & LEVETT CHEMICAL COMPANY of 8 Grand street, New York, have issued a circular describing their improved American Giant dynamo for electroplating and electrotyping. These dynamos are of the inverted horseshoe type. The smaller sizes have a laminated field, and the large sizes a special cast iron field. The armatures are of the modified Siemens type, thoroughly laminated to prevent all possible heating due to "Foucault" or eddy currents. The commutators are made of pure drop forged copper, insulated throughout, and with proper care should last a number of years. The dynamo is shunt wound, and so proportioned that it cannot reverse. It is noiseless, and is provided with self oiling bearings.

An evidence of the depression that has marked the shipping industry during the past year is given in the returns of shipbuilding in Baltimore, where only 35 vessels have been built in 1893, as against 61 last year. The registered tonnage of the vessels shows a still larger proportion of decline, being 5589 tons for 1893, compared with 17,277 tons in 1892, and this notwithstanding that the Baltimore builders have greatly improved their facilities and methods.

The Addyston Pipe & Steel Company of Cincinnati sold 3000 tons of cast iron pipe to the city of Milwaukee last week at $19 85 per ton. The other bidders were the Radford Pipe & Foundry Company of Radford, Va.; the Howard Harrison Iron Company of Bessemer, Ala., and Dennis Long & Co. of Louisville, Ky. The city will use principally 12-inch pipe next year, but the contract covers six sizes.

Measures for the relief of the unemployed this winter are being nearly as urgently pressed for on the other side of the Atlantic as they are in this country. The scarcity of work in English towns was never more marked than at the present time, and distress among workpeople is reported from all parts of the country.

Governor Waite of Colorado, who gained considerable notoriety by his sanguinary speeches in defense of silver some months ago, has been again delivering himself of very warlike sentiments on the same subject. This grotesque Executive is reported as expressing himself at a recent meeting in Denver as being in favor of "fighting for the free coinage of silver at 16 to 1, not all summer, but till hell freezes over." Like Don Quixote, Governor Waite would go any length for his inamorata.

The Minority Report.

The report of the minority of the Ways and Means Committee analyzes in detail the provisions of the Wilson bill so far as it refers to the metal schedule. We quote from it as follows:

The metal schedule presents some features that illustrate in a significant way the illogical character of the bill. Among these may be mentioned the substitution in almost all cases of ad valorem for specific duties; the making free a number of articles called "raw materials;" the disregard of the relations that exist between more and less finished products, and the totally inadequate duties named upon certain leading articles.

Some idea seems to have prevailed in the minds of the majority to the effect that duties should be adjusted in proportion to the advance of the article in manufacture. The idea does not seem, however, to have been very successfully worked out. For example, iron ore is made free, and, reckoning 60 per cent. of metallic iron to a ton of ore, the manufacturer of pig iron is given an advantage as to duties of $1.35 on a ton on his product. But, on the other hand, the amount of protection thereon is reduced about $4.50. The ingots, which are the raw material of steel blooms, are made to bear a duty of 25 per cent. ad valorem; the blooms, which are the raw material of steel rails, bear the same duty, and the steel rails, the last finished product, bear the same also. Such incongruities run all through the schedule, and are apparent to any one familiar with the processes and products of iron and steel manufacture.

Free Iron Ore.

That which lies at the base of our iron and steel industry is iron ore. The existing duty thereon is 75 cents per ton. The revenues from its importation aggregated in the last fiscal year over half a million of dollars ($507,976.19). It is proposed under a tariff bill for revenue only to throw away absolutely every cent of this large revenue by putting iron ore on the free list.

That, however, may be said to be a comparatively small matter in comparison with the effect that the proposed measure will have upon our home industry by the substitution for native of foreign ores, the product of cheap foreign labor.

Our ore industry, from whatever point viewed, is among the most important. According to the census figures of 1890 the production of iron ore for the year ending December 31, 1889, was in excess of fourteen and a half million tons (14,518,041). Its value was more than thirty-three and a third millions of dollars ($33,351,978). Twenty-six States and two Territories, North, South, East and West, contributed to it. In the amount and value of production Michigan stands first, and whether Pennsylvania, a Middle State, or Alabama, a Southern State, stands second is a question of doubt. The amount of capital invested is nearly a hundred and ten millions of dollars ($109,766,199) and the number of men directly employed over thirty-eight thousand (38,227). The average annual earning capacity for each person so employed at current wages is $409.95.

Of course in taking account of the value of this industry to American labor there must be added all the various labor processes, including the transportation, necessary to get the ore from the hill into the furnace stack. The theorist who talks about "raw material" never permits himself to realize that, as has been well said, "nature rarely dispenses with transportation. She never separates, assorts, cleanses and feeds into the hopper or the stack."

The bill proposes to put into competition with American ores foreign ores, some of which are produced at a labor cost one-tenth and none of them at a labor cost greater than one-fourth of ours. It proposes to bring our laborers who get from $1 60 to $2 per day, and who work from 55 to 60 hours a week, into competition with laborers who work 72 hours a week and get 36 to 60 cents per day; our miners who get from $2.25 to $2.75 per day into competition with those who get from 60 to 75 cents per day.

Pig Iron.

Having sacrificed over $500,000 per annum of revenue to the vagary of free trade, the "tariff bill for revenue only" proposes to affect another large source of revenue by serious reduction of the duties on pig iron. That duty now is $6.72 per ton. The duty proposed is 22½ per cent. ad valorem, or about from $1.60 to $1.90 per ton, a lower tariff than was ever before proposed on this article. That suggested by the Mills bill was $6 per ton; under the tariff of 1846 the duty was 30 per cent. ad valorem.

The revenue from pig iron during the last fiscal year amounted to over one-third of a million dollars. While decreased duties will add to importations, it is to be noticed that the difference between present and proposed duties is in the neighborhood of $5 per ton, and that a large loss of product and a large loss of revenue are both inevitable.

Pig iron, so far as both capital and labor are concerned, is one of our leading industries, and is followed in 23 States of the Union.

In the year 1892 our product was 9,157,000 tons, of a value of $131,161,039, and the prices at which it was sold to the consumer were the lowest that it ever commanded. The proposed duty will close all New England furnaces and all east of the Alleghanies, as well as those of the South. The market for Southern pig iron is necessarily found in the North, owing to the lack of demand at the place of production. The consequence is that the competition of Southern pig iron, which of all pig irons is made at the cheapest cost in this country, fixes the price in Northern markets. That price is controlled to a large extent by freight rates. Interior freight rates are very heavy as compared with ocean rates. In many cases pig iron comes from England and Belgium as ballast, subject to no freight charges at all. In other cases it bears a burden not to exceed 5 shillings per ton. At this figure it can be carried to the Atlantic and Gulf ports, and even to those of the Pacific. Assuming that our pig iron, made at the least cost, is made as cheaply as that made abroad, which is not true, it amounts to a demonstration that all of our blast furnaces, save those in the interior, must succumb to foreign competition. Even the latter, if able to exist at all, must do so without margin of profit.

The new cruiser "Powerful," which the British Government purposes building, will be 14,000 tons displacement, with engines of not less than 30,000 horse-power and 48 tubular boilers, with four very large stacks. This will be the first instance of the use of tubular boilers in the British navy in connection with so large a vessel.

The first rice elevator in the world has just been completed at New Orleans for the National Rice Mfg. Company of that city.

HARDWARE.

Condition of Trade.

THE last week of December is devoted more to preparations for closing the year's business than to active attention to trade, which, except in a few holiday and seasonable specialties, is decidedly light. The matter of making the annual inventory is now in hand with a view to closing the books and estimating the financial results of the year. It is expected that inventories will in most cases show a diminished stock, owing to the conservative policy which has been pursued for the last half of the year, and if the balancing of the books does not show diminished profits there will be reason for exceptional congratulation. Most merchants and manufacturers will, however, probably be confronted by the fact that business during the year was considerably less remunerative than usual, but if their losses were not especially heavy, and they are still in condition for the active prosecution of business in the more prosperous days which it is hoped are before the trade, they have good reason for contentment. The year which is ending will long be remembered as in many respects the most trying one in the experience of the present generation of business men. It, however, draws to a close with the promise of better things in the year to come, and as soon as tariff uncertainties are removed it is hoped that there will be a gradual if not a prompt resumption of normal business activity and profit. The reaction from the curtailment of industry must sooner or later come, and the economies which have been enforced during the hard times will be an excellent preparation for a more healthful and permanent prosperity in which we doubt not the Hardware trade will have full share. We close these weekly reviews of the business situation hoping that it will be our pleasant task to record a more satisfactory and profitable business in 1894, and wishing all our readers a Happy and Prosperous New Year.

Chicago.

(*By Telegraph.*)

Jobbing houses are now passing through their usual dull holiday season. Salesmen are either at home or on their way home, and mails are light. Most of the houses here are taking stock and are not specially anxious to be troubled with business at this time. Quite a number of salesmen for Eastern Hardware concerns are traveling through this section soliciting orders for the coming year, but they are not meeting with much encouragement. Jobbers will continue their policy of buying from hand to mouth, except when they are actually offered bargains, until they see some indications of prices hardening.

St. Louis.

(*By Telegraph.*)

There is, practically speaking, no trade. Traveling men are in off the road, making the necessary arrangements for 1894. Stocks are also being arranged for inventory, so that so far as actual sales are concerned the present week will rank among the lightest of the year. Looking back through the year, there is nothing to enthuse over, and it is to be hoped that the turn in trade will come with the turn of the year. Collections are fair.

Notes on Prices.

Wire Nails.—During the past week the volume of business has been light, though it is understood that the low prices ruling have induced the placing of some good orders. The general demand is, however, moderate, the trade not being confident that the lowest prices have yet been touched and deferring their purchases until the opening of the new year. There have been no further developments in the matter of prices, the market being represented as a week ago by the quotation of $1.10 for carload lots at mill, it being, however, understood that this figure is shaded on especially large and desirable assortments. Some of the mills are understood to be fairly well supplied with orders, but others have a good stock on hand and are stopping or curtailing production. In the present condition of the market large buyers will do well to watch it closely, as there is no doubt that for desirable quantities and assortments and for deliveries more or less prompt they can secure more advantageous prices and terms than a few months ago were deemed possible.

Chicago, by Telegraph.—The Wire Nail trade is reported quiet by the manufacturers, and there are few large inquiries from buyers, who are holding off until they are convinced that prices are as low as they are likely to go at this time. Some factories are reported so well sold up that they will go into the new year with a smaller stock than ever before. Nevertheless prices are lower and factory lots are now selling at $1.18½ to $1.25, Chicago. Small lots from stock are sold at $1.30 to city trade and $1.35 to the country.

Cut Nails.—The Cut Nail market is inactive, and purchases are limited by the necessities of buyers. The market in the matter of price is in the same condition as for several weeks, being represented by the quotation of 90 cents for carload lots at mill, a figure which is slightly shaded in the presence of attractive specifications. It is not unlikely that orders especially desirable in the matter of assortment and terms of payment could be placed with some manufacturers at a somewhat lower figure. Small lots from store in New York are quoted at $1.20 to $1.25.

Chicago, by Telegraph. — Cut Steel Nails are quiet, with prices nominally unchanged at $1.15 to $1.20, according to the character of the order. Small lots from stock are quoted at $1.25.

Barb Wire.—Barb Wire continues in substantially the same condition as at our last review, being represented by the quotation of $2.10 for Galvanized and $1.70 for Painted, with 5 cents off in carload lots. The demand is light.

Chicago, by Telegraph. — The Barb Wire market here has weakened and quotations of Galvanized are now made by manufacturers at $2.15, Chicago. The break comes from the East and local manufacturers refuse to meet the cut, as they are selling most of their product direct to the retail trade in small lots, for which they are receiving from $2.30 to $2.35. Jobbers quote small lots from stock at $2.50.

Cordage.—In sympathy with reduced prices for raw material and in the presence of continued active competition among the manufacturers and a very light demand, there has been a decline of about ¼ cent per pound in the prices of Manila and Sisal Rope, Manila being obtainable in large lots at 7¼ cents, and Sisal at 5 cents, terms f.o.b. factory or New York, subject to a discount of 1½ per cent. for cash. New Zealand remains unchanged at 5 cents.

Storm Window Fasteners.—Moore's Storm Window Fasteners, manufact-

Hosted by Google

ured by True & Blanchard, Newport, Vt., and illustrated in *The Iron Age* December 14, 1893, are packed with screws and sold at $2.40 per dozen sets, less a discount of 20 per cent.

Door Spring and Check.—Bardsley's Liquid Door Spring and Check, illustrated in *The Iron Age* December 21, 1893, and manufactured by J. Bardsley, 149–151 Baxter street, New York, is sold at a discount of 15 per cent. from the following list:

Size.	Doors.	Each.	Brackets. Extra, each.
A.	2 ft. 9 in.....	$3.00	$0.25
B.	2 ft. 6 in. to 3 ft.	4 00	.30
C.	3 ft. to 3 ft. 6 in.	5.00	.35
D.	3 ft 6 in. to 4 ft.	6 00	.40
E.	4 ft. to 4 ft. 6 in.	7.00	.45

Glass.—There appears to be no encouragement in the way of improved prices or demand for factories to go into blast, or for factories already making Glass to continue in operation. This includes both the Sheet Window Glass and Plate Glass industries. Factories are not likely to be continued in operation unless they have orders to work on, as they see nothing to be gained in piling up stock. It is difficult to obtain reliable quotations, but taking the quotations given in our last issue as a basis, there are no indications of any advance, but if anything the market is weaker.

The Hardware Club.

A MEETING of the Hardware Club of New York was held on the 22d inst., in the parlors of the Cosmopolitan Hotel. The attendance was a large and representative one and the gathering was characterized by much interest and enthusiasm. William H. Williams, the president of the Club, occupied the chair, and after calling the meeting to order made the following address:

The object of this meeting was pretty thoroughly stated in the call. It seemed to your Board of Governors that you would naturally be desirous of knowing what are the prospects of getting into the new club rooms, of which you have occasionally heard, and what was to be the character of the home which has been provided for the use of the club. It will be remembered that at the last meeting of the club a resolution was passed directing the Board of Governors to engage rooms for the use of the club in the new building of the Postal Telegraph Company on the corner of Broadway and Murray street. Pursuant to these instructions the top floor of that building was secured for the use of the club. The building has a frontage of 62 feet on Broadway and 148 feet on Murray street, with an L at the western end running back about 90 feet from Murray street. This room was secured at an annual rental commencing at $9000 for the first year and running up to $15,000 per year in five years. It was intended at first that the kitchen should be in the L at the western end of the building. We found, however, that this would not permit the most desirable arrangements for the club rooms, and, at the request of the board, the owners of the building decided to put a kitchen on the roof, with a mezzanine floor between it and the club rooms, at an additional rental of $900 per year.

Consultation with the architects of the building and other gentlemen familiar with such matters has convinced us that the rooms as arranged in the plan, copies of which are here for the inspection of members, will, in point of convenience, desirability and general adaptability to our needs, be equal, if not superior, to those of any similar organization in the country.

By request of the board, a House Committee was appointed several months ago, consisting of Messrs. Peter McCartee, chairman; E. C. Van Glahn, Eugene Bissell, J. L. Varick and the president, *ex officio*.

This committee has devoted much time to the consideration as to the needs of the club, and is prepared to report to you to-day upon its requirements. I need hardly call your attention to the fact that the amount of detail necessary to suitably furnish a club such as we propose to have is very considerable. The amount required in the various departments, such as tables, chairs, carpets, silverware, glassware, crockery, cutlery, ranges, refrigerators, kitchen utensils, &c., is much more than we at first thought would be necessary.

I may say at this point that after giving the subject careful consideration, your Board of Governors long ago concluded that it would be useless to carry on a club that should not be first class in all of its appointments, and we believed that if we could secure proper rooms, well and centrally located, and fit them up not luxuriously, but comfortably and conveniently, that the club would be supported by the Hardware and kindred trades and such other gentlemen as we desired to associate with us, and that, conducted along such lines, it would soon be in a prosperous financial condition. From this position your Governors do not recede in any degree. Our membership, as will appear from the secretary's report, is upward of 300, and this in face of the fact that we have had no permanent meeting place, and nothing except the future prospects of the club to offer gentlemen as an inducement for them to join with us. We have the assurance of many gentlemen who have been approached upon the subject that they will join the club as soon as it is ready to occupy its permanent rooms. We believe that there are many gentlemen in this vicinity who have not yet been invited to join the club who will be very glad to do so as soon as we are able to give them the lunching facilities which the club intends to provide. Your board has canvassed this subject pretty thoroughly, and has become convinced that we have excellent reason for believing that within six months after the opening of the rooms our membership will not be less than 400, and that it may reach 500 before the end of the year 1894.

In order that the Board of Governors should not be individually held liable for the rent of the club rooms, an arrangement has been effected with the Postal Telegraph Company, by which, upon the occupancy of the rooms by the club, we shall deposit $5000, or the equivalent thereof, to be held by our landlords as security for rent. From the initiation fees of our present membership about $15,000 will be realized. Deducting from this amount the $5000 to be deposited as security for rent, $10,000 only will be available from this fund for the purposes of furnishings and fittings, as it is the design of your Governors to reserve the annual dues intact for the necessary running expenses of the club.

In connection with this I would like to say that during the past year the board has given a great deal of time and attention to the investigation and consideration of matters pertaining to clubs such as the one it is proposed to have under the name of the Hardware Club. There are several in this city, as you are well aware, and we have been permitted to confer freely with the officers and managers of most of them in regard to many details which would be of interest to our own organization, and I believe I can say that, without exception, all of those organizations which are conducted on a strictly first-class basis are financially prosperous and are regarded as almost indispensable by their members. It is the ambition of your Board of Governors to make the Hardware Club of New York second to none in point of financial prosperity and general usefulness to its members.

The proprietors of the Postal Telegraph Building have taken a great interest in our club and assure us that so far as it is possible for them to co-operate with us in providing us with elegant accommodations no effort will be spared.

I need not detain you by any argument as to the need of such an organization as ours for our trade and those who are associated with us in the club. The general interest manifested by our membership convinces me that you appreciate those advantages quite as fully as your officers and your Board of Governors do, and I have pleasure in believing that you will loyally sustain those officers and governors in all proper efforts to provide for you a suitable place of meeting, and to place this club upon an enduring basis of prosperity.

Hosted by Google

To this somewhat general report, I will only add that a committee has recently been appointed to make arrangements for the annual dinner of the club, the date of which will soon be announced.

I now ask your attention to the reports of the various officers and committees to which I have referred.

The secretary read a letter from Mayor Gilroy, in which the latter regretted his enforced absence from the meeting. Mr. Varick then presented his report as secretary. It showed that there were at present in the club 248 resident members and 59 non-resident members, making a total of 307 members, against 228 resident members and 61 non-resident members, a total of 289, for last year. The treasurer's report was then presented by Mr. Keating, who was followed by Mr. McCartee with a report as chairman of the House Committee. Mr. McCartee furnished a detailed estimate of the probable expense of furnishing the club's quarters, and stated that his estimates were based on a daily attendance of 225, although the club rooms were amply sufficient to accommodate from 350 to 400 members at one time.

Mr. Hayden as chairman then submitted the report of the Finance Committee, after the reading of which David Williams offered a resolution in which the action of the Finance Committee was approved and pledging the support and co-operation of the members of the club in the efforts of the Board of Directors looking to the future. Messrs. Newhall, Hamilton, Weaver, Marshall, Leonard, Keating and Bissell spoke in support of the resolution, which was unanimously adopted. Mr. Mitchell then moved a vote of thanks to Mr. Wildey, the proprietor of the hotel, for the use of his parlors, after which the gathering adjourned.

Preparations are already making for the annual dinner of the club, which will be held in the latter part of February, 1894. It was expected that this dinner might be held in the new club rooms, but it is now feared that this will not be possible, as the quarters will hardly be ready in time. A Dinner Committee has been appointed by the president of the club, comprising the following gentlemen: Peter McCartee, E. C. Van Glahn, Eugene Bissell, A. D. Clinch and J. L. Varick. A Sub-committee on Speakers and Toasts has also been selected, consisting of Richard R. Williams, James H. Kennedy and Webster R. Walkley.

The Hardware Merchants and Manufacturers' Association.

AT A REGULAR MEETING of the Philadelphia Hardware Merchants and Manufacturers' Association, held on December 19, the following preamble and resolutions were adopted:

Whereas, The proposed tariff bill prepared by the Ways and Means Committee, so far as it relates to the change from specific to ad valorem duties, on which the cost of goods is not to be estimated at American valuation, but upon inventory prices in foreign countries; and

Whereas, We believe this change will open the doors to great and possible frauds through disguised, ficticious and under valuation upon invoices, and will largely discriminate against the honest American importer; and

Whereas, Many changes in the present duties are proposed, which examination shows most seriously, disastrously and injuriously affect, if not cause bankruptcy to, many of our manufacturing industries, and is a direct attack upon the American workingmen, coming at a time when they are suffering from enforced idleness; and

Whereas, We believe these changes must result in diminished trade, reduced wages, add to the unemployed, and thus fall heavily upon the wage earner, and bring distress to a vast number of people;

Therefore, be it resolved, That the Hardware Merchants and Manufacturers' Association of Philadelphia record this emphatic protest against the passage of the Wilson bill as legislation that will retard our industrial progress, jeopardize invested capital, and compel a reduction in the wages of our workingmen, which will necessitate a change in their mode of living.

Resolved, That we request the members of Congress, without respect to party, to resist, by every available and lawful means, the passage of this proposed tariff bill.

Return Postage.

MANY MEN who are punctilious in conforming to business usages often in writing letters to which they expect answers fail to inclose stamps to prepay postage on the reply. It would be better still to inclose an addressed stamped envelope with a written address. An inquiry will receive earlier attention and perhaps more careful attention if it involves but little trouble and no expense to the person addressed than if the latter is expected to do considerable work and foot the bill besides. This may seem a small matter—only 2 cents involved—but the principle of the transaction is apt to govern the person who is expected to reply. He is very apt to say to himself, "Well, if this man expects an answer he should at least have inclosed a stamp." There is very little danger of any one taking offense at such an inclosure. The inquirer who hesitates to inclose a stamp to a concern transacting a million dollars' worth of business a year because it is such a trifle may find upon reflection that the existence of that house depends upon an aggregation of two-penny profits.

There are salesmen who at this time of the year are endeavoring to secure positions with other houses, and yet omit the inclosure of return postage on the reply which they unhesitatingly look for to their letter of application. If they receive answers to such unbusinesslike letters they are in luck, and they may be sure that something else has recommended them than their correct observance of business civilities. The amount involved is of no consequence. Even if letter postage should be reduced to a penny, a stamp should still be inclosed to insure a reply.

Bicycles for 1894.

THIRD ARTICLE.

Prices.—Many of the manufacturers are still reticent in the matter of prices, deferring a public announcement until the opening of the new year. It is, however, evident that there will be a wide range of prices, and while some of the machines will be held at the figures which ruled during the past season, many others will be offered at lower prices. Pope Mfg. Company have, however, announced their line of machines and their prices. The standard price of Columbias is reduced to $125, though some of the lighter machines are listed higher. The line of wheels presented for the coming season, with weights and prices, as more fully referred to below, are as follows:

Columbia Model 34, 30, or 29 pounds without brake	$125
Columbia Model 35, 37 pounds, ladies' wheel	125
Columbia Model 36, 37 pounds	125
" " 37, 21½ "	150
" " 38, 31 "	125
" " 39, 35 "	140
" " 33, 19½ "	160

Manufacturers' Announcements.—We give below further advices in regard to the lines of wheels which will be put on the market during the coming season, and in future issues shall refer to the product of other manufacturers and the changes in their line for 1894:

THE POPE MFG. COMPANY, 221 Columbus avenue, Boston, have issued their 1894 catalogue, describing and illustrating the Columbia Bicycles. It is comprehensive and artistic, showing not only wheels, but many pleasing views of Bicycle riders, together with illustrations of Bicycle parts and methods of construction. The company offer no wheels made in previous years, but all the wheels are new, and the line is large and varied. Two special machines for tall riders and a light, well equipped wheel for ladies are also shown. Among their specialties are a new light pedal, the new Hartford double tube tire, and the adoption of wood rims on some of the lighter wheels. The company remark that careful provision has been made for filling every reasonable requirement as to style, construction, size, lightness, strength and equipment, so that purchasers of high grade machines may select from their stock Bicycles to suit their particular cases. The Columbia Model 34 weighs 30 pounds, or 29 pounds without brake, and is designed for expert and intelligent riders who take care of their mounts even while putting them through hard road

Hosted by Google

work. This machine lists $125. The Columbia 35, a ladies' wheel, presents only such minor changes as have appeared desirable to bring it fully up to date. It weighs 37 pounds, but can be stripped to 30 pounds, and lists $125. Columbia Model 36 is designed as a safe machine for fast and hard work under all riders, and is fitted with loop seat rod, rubber pedals, complete wheel guards and rear wheel brake, thus weighing under 37 pounds, stripped 32 pounds, and lists $125. Columbia Model 37 is a semi-racer particularly built for track work and for road racing under reasonable conditions. It is fitted with wood rims, weighs 21½ pounds and lists $150. Model 38 is practically identical in its details with their Model 34, with extra high frame substituted for the regular size, affording a minimum reach of about 37 inches as against 32 inches in Model 34. This can be readily increased to meet the requirements of taller riders by moving up the L-rod or by substituting the loop seat rod. The machine with brake weighs 31 pounds, or 1 pound less without brake, and lists $125. Model 39 is another machine particularly designed for very tall riders, having an extra high frame, with 34-inch wheels, affording a minimum reach with the use of the L-rod of about the same as Model 38, and while its weight is a few pounds greater it carries the rider somewhat higher from the ground. It weighs 35 pounds, listing $140. Model 33 is a racer constructed with the company's double diamond frame, combining rigidity and lightness. It is fitted with wooden rims, weighs 19½ pounds, and lists $160.

GENDRON IRON WEEEL COMPANY, Toledo, Ohio, present for the coming season three Gendrons: Roadster, ladies' and scorcher. The roadster, or No. 15, weighs 36 pounds, and is listed at $130. It has Nos. 16 and 18 gauge tubing in the frame and No. 18 gauge fork blades. No forgings are used in the fork crown, head or crank shaft sleeve. The ladies', or No. 14, wheel has the same gauge tubing in the frame, and has the upper bar reinforced at its lower curve by a telescope 18 inches long. The wheel weighs 36 pounds and lists at $135. The scorcher, No. 17, has no tubing in the frame lighter than No. 18 gauge, with No. 18 gauge fork blades. There are no forgings in the crown, head or crank sleeve. The machines are all fitted with the Buckeye pneumatic tire, which has an endless air tube completely encircled by the outer cover, and has a bridge across the seam at the base of the outer cover. The outer cover is split at its base and laced all around, but in eight sections, so that when punctured only one section need be unlaced. The manufacturers guarantee the machines to be free from all imperfections in material and workmanship, and will replace any time during the year 1894 all parts which show such imperfection. The guarantee applies to the Buckeye pneumatic tire.

THE AMERICAN ORMONDE CYCLE COMPANY, 135 West 125th street, New York, will offer for 1894 the Ormonde Model G, light roadster, with wood rims, weighing complete 27 pounds; the ladies' Ormonde, the same weight as the gentlemen's wheel, the tubing being of larger diameter than usual, but of lighter gauge. Also a line of Ferris Bicycles, all of which will list at $100. The gentlemen's wheel will have Humber shaped frame, tangent spokes and steel rims, fitted with Morgan & Wright, Bidwell or New York Belting & Packing Company's tires. Wood rims will be fitted for $5 extra. The nickeling and enameling will be, it is stated, as fine as on the best machines. The Ferris scorcher will also list $100. The ladies' Ferris will be built on the lines of the ladies' Ormonde, and will be fitted in detail the same as the gentlemen's Ferris. The company, it is stated, recognize that the popular price will be $100 next year, and exerted themselves to produce as fine a wheel for the price as it is possible. Among the cycling sundry novelties, of which they make a specialty, are very light racing pedals and adjustable lamp brackets, a pocket repair outfit, featherweight bells and miniature lamps.

TWO SPEED BICYCLE COMPANY, St. Charles, Ill., will market a 30 inch gentlemen's wheel with gears 68 and 51, weighing 35 pounds; a 28-inch gentlemen's wheel with gears 63 and 48, weighing 34 pounds; and a 26-inch ladies' wheel with gears 58 and 44, weighing 34 pounds. The machines are shifted from one gear to another without taking the feet from the pedals by turning a small switch lever. The larger sprocket is used when riding on good roads, and the smaller one for hill climbing. The sprocket not in use runs idle, and for coasting the cranks stand still if desired. It is remarked that there is no jerk when the gear is changed.

SURBRIDGE MFG. COMPANY, Hagerstown, Md., will have a line of Cycles for 1894, including the following: America, 28-inch, list $135; Century America, 28-inch, list $100; America Girl, 26-inch, ladies', $100; Young America, 26 inch, boys', $70, and Kid America, 24-inch, boys', $50. Their leaders are the $100 wheels, which are referred to as being high grade in every respect, differing only from the higher priced by being a couple of pounds heavier. Their boys' wheels are built of high grade material and will weigh about 26 and 29 pounds respectively.

The line of Liberty Cycles put on the market for 1894 by WILSON, MYERS & Co., 55 Liberty street, New York, with factory at Rockaway, N. J., consists of seven distinct patterns. The Liberty Bogie Man track racer weighs 19 pounds and lists at $140; 1894 model Liberty scorcher weighs 28½ pounds and lists at $125; 1894 model Liberty roadster weighs all on 35 pounds, listed at $125; 1894 model ladies' Liberty weighs 33 and 37 pounds, listed at $125; 1893 model Liberty road scorcher weighs 31 pounds and lists at $110; the Hummer scorcher weighs 32 pounds and lists at $100, and the Hummer roadster weighs 38 pounds and is listed at $90. By stripping of mud guards and brake, the machines listed all on can be reduced 3 pounds in weight. The prices given are a total change from any prices the firm had in former years. In this connection they state that they have responded to the call from all over the country for a reduction in price, and that in addition to this they have introduced the two models of Hummer safeties, which are medium grades, and are listed at a price which the makers believe will be taken advantage of by parties of limited means. For 1894 is presented the Liberty detachable pneumatic tire in its improved form. It is claimed that it does not depend upon air pressure to hold it to the rim, and that it is impossible for the tire to creep. A new combination pedal is also introduced for next season, and all Liberty machines will be fitted with a pedal of the rubber character, which can be converted into the rat trap pattern in a minute's time, which practically gives two pairs of pedals with each cycle. They will continue to use the Liberty patented hub, which is referred to as having given excellent satisfaction in past years. Two hights of frame are built, better adapting the machines to riders both short and tall. Two styles of handle bars will be furnished, one suited for the so called scorcher, who likes the stooping position; the other allowing the rider to sit up in a perfectly erect position. The latter is designed more especially for wheelmen of advanced years.

BUFFALO WHEEL COMPANY, Buffalo, N. Y., wi l sell the following wheels for the season of 1894: Century Niagara, 32 pounds, a high grade Bicycle, listing $100; Maid of the Mist, 30 pounds, a high grade ladies' wheel, listing $100; special racing wheel, 15 pounds, built to order, listing $165; stock Niagara racer, 21 pounds, for track or road racing, listing $150; semi-racer, 26 pounds, same design as the stock racer, listing $125; full roadster, weight stripped 34 pounds, 30-inch front and 28-inch rear wheels, for heavy weights, listing $125, mud guards and brake included; also a Tandem convertible weighing 54 pounds and listed at $250. In addition the company show a special Bicycle hub and a novelty in sulky wheels, the latter having four sets of spokes.

THE PROVIDENCE TIRE COMPANY, Providence, R. I., are putting a new Tire on the market for 1894. It is known as the Providence Double Tube Tire, and provides for the use of two inner tubes, one drawn through the other. Each tube has an independent valve, and in use the outer one is first inflated, forming an ordinary inner tube Tire. Should this become punctured or the valve get out of order, all that is required is to inflate the reserve inner one, which, when uninflated, lies in the hollow of the rim, fully 1½ inches from the outer surface. Should the second tube become damaged, it can be inflated again by displacing it so the puncture in the two tubes will not be opposite each other; the outer inner tube thus forming a patch for the puncture of the inner inner one. It is stated that the double inner tubes are as easily detached and mended as the single inner ones, and that they do not weigh more than the average single tubes and are much more elastic and lively.

Trade Topics.

Extra 2½ Per Cent.—Mr. B., who represents, among other houses, the manufacturers of Ames' Shovels, was chatting about business with me, writes a Western correspondent, when we touched upon firmness in prices, and he said:

"I always knew that Mr. Ames was pretty stiff in his prices, but I never knew just how firm he was until one time a man who was handling a few goods said to me: 'B., I am ready to give you a $5000 order for Ames' goods, and I will agree to send another order of equal amount within six months if you will give me a slight concession. I want an extra 2½ per cent.'

"Now, I thought he wasn't asking very much, and I was going to the fac-

Hosted by Google

tory very soon, so I told him I'd lay the matter before Mr. Ames, and I was pretty sure it would go through.

"Well, sir, do you suppose it did? No, sir.

"Said Mr. Ames: 'It will not do. It would be a mistake. Why, Mr. B., if we allow him an extra 2½ per cent., in less than six months he will be convinced that some other house is getting an extra 5 per cent. and he will be a good deal more dissatisfied than he now is.'

"And," added B., "I am firmly convinced that he was right.

"Mr. ——— and I had been representing the Ames concern several years on the road," continued B., "and had really done but little for the house. Then duller times came and we rather expected that they would have no further use for us, but we went to see them at the proper time, to have it over with.

"'Well, boys,' said Mr. Ames, 'the time has now come when we need your services; as trade has been it did not matter much whether any one mentioned our name on the road or not, but now we want your help.'

"Wasn't that pretty solid sense? We appreciated it and determined we would give him our very best licks that year."

Travelers' Methods. — A Western jobber writes us:

Some traveling men have a way of lingering about the showcase near the door, as if they were looking for something they wanted to buy, thus enticing a man forward to meet them, and then pushing out their card to him. It always makes me mad when I am trapped this way, and the man must have something I am in very great need of to get me to order from him.

I suppose part of the reason is that he gets a man away from his desk, or away from others who may be near him, and secures his undivided attention. But it is a poor way to commend one's-self to the man who has dropped an important letter, perhaps, and hurried forward to wait upon a supposed customer.

The other day I was busy at my desk, which is quite a distance from our front door. A man came in whom, at first glance, I took to be a traveling man, and I kept on at work till he should reach my desk, desiring to save every minute that I could.

But instead of walking along toward me he stopped at the first showcase and began examining its contents as if in search of something, while he whistled and used a toothpick as if having no cares in this world. I began to wonder if I was right about him. Perhaps he was in search of something, and if so must look upon me as a very independent merchant not to go forward and wait upon him.

Finally, I could not see my duty clear to sit there longer, so I walked forward. He did not advance toward me, but, on the contrary, began working back to the further end of the showcase, as if he had seen the article he wanted.

As I reached him he lifted his face from the glass to me for the first time, smiled in the universal way, and informed me that he represented the ——— Mfg. Company, and then gave me his card.

I was in no pleasant frame of mind, for there was nothing in our showcase in his line, over which he might have been interested, and no reason why he should not have walked back to my desk when he entered the store, instead of drawing me out to the front to meet him.

I bought no goods of him, nor would I have done so if I were wanting them ever so badly.

Back Orders.—One of the most provoking things, writes a correspondent, in having orders filled in part is that the one thing you want the most is sure to be the item placed on the back order.

I don't know how many times, but they are legion, I have discovered I was out of a certain article, and in making out an order added other goods that I was not then needing, but simply ordered to make up a package and divide freight charges. And then I have had these other goods sent along promptly, while the one item I really needed was not sent at all. I don't know how to remedy this, but it is terribly annoying.

Another thing about orders that annoys one, but which could easily be remedied: If I send an order to a jobber I get some goods at once and am given some advice about the goods placed on the back order book. But a great many factories have a very unsatisfactory way of acknowledging the receipt of one's orders, but never adding a word as to when the order will be filled.

This is a very great annoyance to a man who may be out of the goods and would like to know what he might promise to his own trade. At the office of the factory it is known about when the goods can be shipped, and a line to that effect upon the acknowledgment of the order would appear to be an easy thing to add and the natural thing, too.

Spot Cash.—"Men interpret things in various ways," writes a jobber. "I sold a bill of goods to a man for spot cash, giving him my best cash prices. The invoice read: 'Terms, Spot Cash.' The bill ran 60 days. I sent a statement, adding 60 days' interest, which he refused to pay, because in the printed heading of our bill was this line: 'Subject to draft at sight if not paid when due.' My customer said that he supposed I would draw for the amount of the bill and as I did not I was not entitled to interest!"

A Peculiar Decision.—"Speaking of printed terms reminds me," continues the correspondent, "of a peculiar decision made by an Ohio judge a few years ago. The circumstances were these: A, in Cincinnati, sold B, in Toledo, a bill of goods. A printed line in the bill head read 'This bill is payable in Cincinnati or New York par funds.' B remitted for the invoice by a draft on New York, but before the draft was presented the Toledo bank issuing it had failed, and payment in New York was refused. A sued B for the amount of the invoice. It was admitted that due diligence had been observed in forwarding the draft and that B had nowhere been guilty of negligence, but it was claimed that the draft on New York was sent in compliance with the line in the bill head, that this draft was good when sent from Toledo and when received in Cincinnati and consequently that B had paid the bill, and the Toledo judge so decided. The case was never appealed.

Trade Items.

POPE MFG. COMPANY, 221 Columbus avenue, Boston, have issued their 1894 Columbia Calendar. It is composed of a block of calendar leaves, one for each day, fastened in a metal back. In addition to the date and blank space for memoranda on each sheet are remarks regarding the attractions and advantage of Bicycle riding.

THE ENTERPRISE MFG. COMPANY OF PENNSYLVANIA, Philadelphia, advise us that their stock of parts for Great American Meat Cutters is rapidly becoming exhausted, and that in future they can only supply such parts as they may have on hand at time of order, having decided not to continue the manufacture of the Great American Meat Cutters or the parts thereof.

THE BOSTON FILTER COMPANY, 21 Broadway, Chelsea, Mass., manufacturers of the Boston Water Purifier, sell their small Filters, but large ones, such as are used by hotels and restaurants, are put in at no original expense to the user, the company charging a nominal rent for the work of the Filter, and taking complete care of the apparatus. Although Boston has been noted as a great consumer of spring waters, the company advise us that they are successfully furnishing 90 per cent of the large hotels and restaurants in the city with their Filters.

AMERICAN ORMONDE CYCLE COMPANY have decided to consolidate their wholesale and retail trade at one address, and will move their retail business to 10 Barclay street, a few doors from Broadway, New York, on January 1.

A DECISION has just been rendered by Judge Putnam in the suit of Edmund Converse against Ambrose T. Matthews, both of Worcester, Mass., for the infringement of a patent relating to Stove Knobs having a base made from a blank with wings or leaves instead of from a circular piece of sheet metal, as Knob bases have heretofore been made. The decision of Judge Putnam sustains the patent, which is owned by the Worcester Ferrule & Mfg. Company, Worcester, Mass. We are advised that under this patent the cost of manufacturing Stove Knobs has been largely reduced.

OUR READERS will observe the advertisement among the Special Notices in this issue signed "Selling Agent," in which the advertiser announces his desire to represent manufacturers of leading goods to the wholesale trade of

the West and Northwest. The advertiser is a gentleman of long experience and wide acquaintance with the trade, and is in a position to render efficient service to those who may desire to make such an arrangement with him.

GRAHAM, HINKLEY & Co., exporters, 9 South William street, New York, are greeting their friends and patrons with an engraved card on heavy beveled board, extending the compliments of the season and wishing happiness and prosperity during the coming year. This well known house do an extensive trade with the West Indies and other South American countries.

F. W. WURSTER of F. W. Wurster & Co., who has accepted a place in Mayor-elect Schieren's cabinet as Fire Commissioner for Brooklyn, is well known there as the head of a large rolling mill plant at Kent avenue and South Sixth street. This is said to be the only mill of this character of any consequence in New York or Brooklyn rolling Merchant and Bar Iron. They also manufacture Axles largely. Mr. Wurster is president of the Hanover Club, a prominent social organization in the Eastern District.

THE HARDWARE AND STOVE STORE of Gates & Hillier, Cooperstown, Pa., was destroyed by fire on December 14. The loss is estimated at $12,000. The firm will resume business as soon as possible, and advise us that they will be pleased to receive from manufacturers catalogues and price-lists relating to their goods.

JOHN G. ROLLINS, 15–25 Whitehall street, New York, issues a circular letser in which he calls attention to the fact that he has had 27 years' experience as a buyer from American manufacturers for export. He is a buyer from American manufacturers for shipment to Great Britain, Continental Europe, Australasia, India, China, Japan and South Africa. He lays emphasis on the fact that he can buy and ship on very favorable terms. Purchases are made exclusively for cash, thus enabling him to obtain advantages from producers. He adds that, employing no travelers, he can afford to work for small commissions, which he alludes to as a consideration in these days of acute competition. On application quotations will be made for anything manufactured in the United States, either delivered on ship or at nearest port of entry abroad.

THE ILLINOIS PURE ALUMINUM COMPANY, Lemont, Ill., are manufacturing an Aluminum Sanitary Pail. This article weighs 2½ pounds and is designed for use in hospitals, asylums and public institutions of any description. It is recommended for these uses because of its lightness, perfect cleanliness and freedom from odor, and because it is proof against corrosion.

Newhall Ship Chandlery Company.

NEWHALL SHIP CHANDLERY COMPANY, Henry B. Newhall Company, general agents, 105 Chambers street, New York, have adopted an original and novel method of calling the attention of their correspondents to prominent goods in their line. This is accomplished by illustrations of a different article on each letter head, under which is the catalogue page upon which the goods are found, together with a blank space for a quotation. A series of the letter heads illustrate Row Locks, Packing, Cleats, Galvanized Blocks, Thimbles for manila and wire rope and repair links. The line of goods is thus prominently brought before their customers and particular emphasis called to the different lines by means of the quotation. A circular letter is being sent to the trade, in which the company refer especially to their Galvanized Malleable Iron Tackle Blocks, upon which a discount of 70 per cent. is quoted, delivered in New York, with 2 per cent. off for cash in ten days. A convenient catalogue devoted entirely to Awning Hardware, with blank pages for memorandum, has been issued by the company, which is particularly interesting because of its seasonableness.

Price-Lists, Circulars, &c.

M. A. WOODBURY, Bradford, Pa.: Woodbury's Automatic Dry Chain Lubricator. The part resting on the chain is a small sack 1 x 5¼ inches in size, which is doubled over where it is held by a spring clamp, the long upper end of the clamp keeping the loose ends of the sack in place. The sack is filled with fine dry lubricant; the jar of the machine sifts the lubricant on to and into the chain, while the sack dusts the wearing parts of the chain.

THE ALASKA REFRIGERATOR COMPANY, Muskegon, Mich.: Alaska Refrigerators. The 1894 catalogue of the company is well printed on a fine quality of paper, and handsomely illustrated. At the front of the book is a full page view of their works, showing buildings of large extent, in connection with which are their lumber yards. The buildings, which are of brick and stone, include a main factory, three stories high, 340 feet long by 60 feet wide; main warehouse, two stories high, 400 x 60 feet, and another warehouse 100 x 200 feet, besides several smaller buildings. Illustrations are given of soft and hard wood Refrigerators, Apartment House Refrigerators, Sideboards, Butchers', Grocers' and Florists' Refrigerators, Double Coolers, &c.

ONEIDA COMMUNITY, Niagara Falls, N. Y., and 59 Murray street, New York: Fine Silver Plated Ware. An illustrated catalogue shows Table Flat Ware in Christine, Viola and Windsor patterns, including Spoons, Forks, Sugar Spoons, Butter Knives, Sugar and Bon-bon Tongs, Fish Knives and Forks, Salt and Mustard Spoons, Ladles, Nut or Berry Spoons, Child's Sets, &c. The manufacturers refer to the quality and finish of their A1 goods, stamped with their name. They also make a complete line of medium grade Silver Plated Ware and solid unplated A1 Silver Metal goods, in both plain and figured patterns. A line of goods stamped N. F. Nickel Silver Company are warranted by the company to be made of 10 per cent. nickel silver, well plated and finished.

EASTERN FORGE COMPANY, 70 Kilby street, Boston, Mass., with works at Portland, Maine: Forgings of all descriptions; Machine, Blank and Tap Bolts; Hanger, Coach and Cap Screws; Boiler and Bridge Rivets, Special Bolts and Nuts, Railroad Track Bolts; Plain Cold Punched, Chamfered, Trimmed and Drilled, Hot Pressed and Hot Pressed Reamed Square and Hexagon Nuts. A well arranged and clearly printed catalogue gives list prices and tabulated information about the foregoing goods in convenient form. Tables are also given of the weight per 100 of Machine Bolts, Blank Bolts and Coach Screws; number of Railroad Spikes to 100 pounds and the weight per lineal foot of round, square and flat Iron.

BROCKTON MALLET & MACHINE COMPANY, Brockton, Mass.: Mallets, Mauls, Hammers, Handles, &c. The Mallets are made of imported rawhide disks, secured between two collars on a solid steel hub, with a leather handle made of selected leather disks compressed on a solid steel rod, then turned down to fit the hand, thereby producing, it is claimed, a handle that will not bend, break, work loose or blister the hand, as it is porous and absorbs the moisture. It is stated that the Mallets are subjected to a pressure of 30 to 50 tons.

It Is Reported—

That Geo. W. Redman's Hardware and Furniture store at Green's Landing, Maine, was considerably damaged by fire on the 9th inst. The damage to the building was $300 and to the goods $500. The former was insured, but there is no insurance on the latter.

That the Stewart & Sox Hardware Company, Albany, Ore., have been incorporated. The capital stock is $35,000, divided into 350 shares. About January 1 the company will move into their new quarters. The members of the company are E. F. Sox, C. H. Stewart and E. Redeker.

That the Tompkins Hardware Company and the Cary Hardware Company of Leadville, Col., have consolidated their interests, and will hereafter conduct business as one establishment. The capital stock of the new company has been placed at $100.000. The officers are as follows: H. H. Tompkins, president; John Harvey, vice-president; D. La Salle, treasurer; I. J. Cary, manager. The directors are H. H. Tompkins, John Harvey, L. H. Tompkins, D. La Salle and I. J. Cary.

That W. C. Grier has sold his Hardware store at Blunt, S. D., to N. E. Westover. Mr. Grier has removed to Plymouth, Wis., where he has purchased a Hardware stock and will continue the business.

That A. F. Anderson has purchased the Hardware business of H. L. Rich at Red Wing, Minn.

That M. A. Simpson has bought the stock of Hardware of H. Fishman, Mt. Ayr, Ill.

That J. H. Barlow and Chas. Turk of Woodward, Iowa, have bought the Hardware stock of E. M. Jones. They will hereafter conduct the business under the style of Barlow & Turk.

That Chas. B. Payne of Knox County has purchased the stock of Hardware of W. B. Keller, Brashear, Mo.

That the second and third stories of the building of the Fones Hardware Company, Little Rock, Ark., were burned out on the 20th inst. The loss, which was heavy, is fully covered by insurance.

That Harrington & Knight, Hardware dealers, who were burned out in the great fire at Fargo, N. D., some months since, have taken possession of their new quarters.

That a new Hardware and Tinware store will soon be opened at Wayne, Mich., by Drew & Doolittle.

That Mitchell's Hardware store at Packwood, Iowa, was destroyed by fire on the 21st inst.

That E. N. Falke, formerly of Massillon, Ohio, has opened up a Hardware store at 811 Monroe street, Toledo.

That J. W. Smith and P. J. Alexander have bought the Hardware store of J. S. Smith & Son, Farber, Mo.

Hosted by Google

That Emerson & Fehlman, Steele City, Neb., have bought out the Hardware stock of F. Maw.

That J. P. Siner's Hardware store, at Shelburn, Ind., was destroyed by fire on the 19th inst.

That C. H. Cure, Pipestone, Minn., has sold his stock of Hardware to H. A. Marsh of Mason City, Iowa. Mr. Cure will continue with Mr. Marsh for the present.

That the Hardware store of Sires & Tulley, Trenton, Mo., was robbed on the 18th inst.

That W. S. Cox and R. A. Brownlee of Havelock, Iowa, will open a new stock of Hardware at Mallard in the near future.

That W. M. Rogers, late of Kittleton, Col., has opened a Hardware store at Florence, Col. He will also conduct a plumbing and tin shop.

That the stock of Hardware of E. P. Messer & Co., Sheldon, Iowa, was destroyed by fire on the 11th inst.

Paints and Colors.

It should be understood that the prices quoted in this column are strictly those current in the wholesale market, and that higher prices are paid for retail lots. The quality of goods frequently necessitates a considerable range of prices.

Nothing has occurred to relieve the uncertainty that has existed for some time past in the general market for Paints and Colors. The outlook for the leading pigment, White Lead, is quite as puzzling as it has been at any time during the past 60 days. While superficially firm, the market for Linseed Oil is a very uncertain one. This tends to restrict trade, and there is just enough uncertainty about the future of other base materials, along with general trade inaction, to keep business down to smaller volume than usual at this season of the year. There is nothing suggestive of speculative tendency in any direction. Most accounts go to show that retailers are buying in an extremely conservative way and that manufacturers are governing their operations accordingly.

White Lead.—Except for small quantities there is no demand at present. Jobbers talk and act as though they were perfectly satisfied to follow conservative policy of the most pronounced type until some of the uncertainties as to action by the leading producers are at least partially cleared up. Meanwhile the "outside" manufacturers continue a vigorous competition and list prices for trust brands are nominal in a great degree. Quick process and mixed Leads are selling at prices quite as low as any that have ruled previously this year, and small lots of "combine" Lead are still being dealt out by jobbers at less than the official list rates.

Red Lead and Litharge.—Fair orders have been placed for foreign brands, chiefly low grade, for future delivery. Otherwise dealings continue to be small and the demand generally is spiritless. Prices are rather weak, but show no radical change.

Orange Mineral.—While no radical change in prices of foreign brands is quoted, the fact is admitted that the market continues to be rather weak and the probabilities are that buyers of round lots can secure concessions of about ¼¢ @ ½¢ from popular quotations. American is very quiet also, but quoted at old prices.

Zincs.—There has been no change in the market for American Oxide. The general report is that orders have averaged small, but that the business effected was chiefly at prices in line with quotations that have been general for some time past. The surface indications are that the market is in rather weak condition, due chiefly to slowness of orders. The list prices for foreign brands remain unchanged, but these are shaded more or less by some jobbers.

Colors, &c.—Somewhat more liberal orders have been placed for bulk stock used by grinders, at, as far as could be learned, very low prices; apart from this nothing but routine winter season business appears to have been effected in either Dry or Oil Colors and the general report was that the demand continues slow. Ready mixed Paints are being ordered for future delivery to a fair extent, but spot business continues slow.

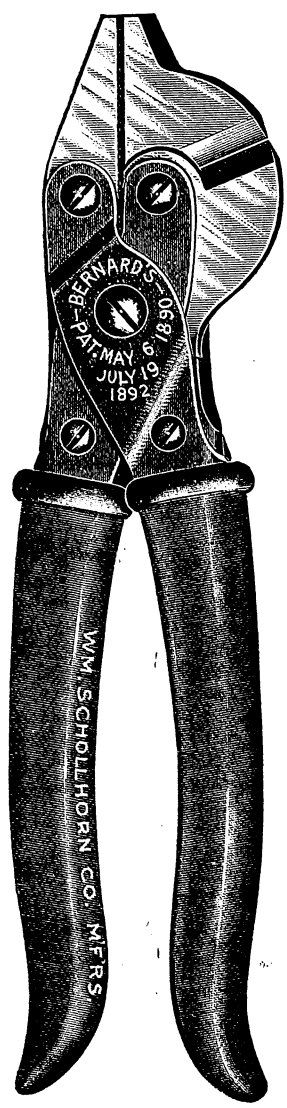
Oils and Turpentine.

The past week has been as bare as the preceding one was in point of distinctively new feature. Hardly anything outside of routine business has been effected and nothing has occurred that would tend to stimulate purchases for either home trade or foreign account. Prices, with a very few exceptions, have remained almost stationary, and it is only in remote instances that the dullness in general trade, or the extreme caution that usually prevails at this season of the year, has been broken. There is nothing in the present situation of affairs indicative of any radical change in the immediate future.

Linseed Oil.—No further changes in prices have been made by either local or outside crushers. The basis price of 47¢ for raw Oil prevails and competition is conspicuous in its tameness. To some extent this may be attributed to the condition of the market for raw material, but there are some signs that late conflicting interests are working quite harmoniously for the time being.

Cotton Seed Oil.—Prices have undergone hardly any change, and the gen eral situation of the market remains about the same as it was last week. Home trade buying has been commonplace and export business tame, while the former line of prices has ruled for both crude and refined products.

Lard Oil.—Prices have ruled somewhat lower and the market is at present in rather uncertain form, but showing signs of weakness. On prime stock 70¢ has been a common price and business was done at as low as 69¢, but, in view of the condition of the market for raw material, pressers are very slow to take further orders at those figures. Low grades have been sold to a moderate extent at about 1¢ @ 2¢ under the popular quotations.



Fish Oils.—Comparatively little business has been effected in crude Sperm, Whale or Menhaden Oils, but the deals put through were chiefly at old prices and nothing has transpired that would point to probable radical changes in the immediate future. The movement in pressed and bleached Oils has been strictly routine and at practically former prices.

Miscellaneous.—Olive Oil has moved out in moderate quantities at former prices. The same may be said of Cocoanut. Red Oils have just about held their own in price, although rather dull. Mineral Oils are without radical change in price and find rather slow sale.

Spirits Turpentine.—Prices have been remarkably steady, varying in a fractional way only from 29¢ to 29½¢. Business has continued spiritless, but enough stock goes out to prevent any great accumulation here. Shipments from primary points are only fair, and most advices note a favorable position.

Lineman's Plier.

William Schollhorn Company, New Haven Conn., Julius Berbecker & Co., agents, 65 Duane street, New York have incorporated the Bernard principle in cutting pliers in a tool designed for linemen, as here illustrated. It is intended for cutting high tension electric wires with no risk to the operator. It is 8 inches long, of crucible steel, polished and nickeled. The interchangeable parts are held together with screws and hexagon nuts, so that, if necessary, any portion of it can be renewed at will. Directly under the center pinion, opposite the cutter, is a set screw, to compensate for any wear on the cutter. The cutting jaws have a maximum opening of ½ inch, diminishing to ⅜ inch at the base. Single copper wires of a diameter of ¼ inch, together with the usual covering, are easily cut. The handles are covered with pure, soft, black rubber to protect the user from shock, while the coverings can be removed or replaced at any time. Later a smaller size, 5 inches long, will be brought out for the same purpose.

Insulated Lineman's Plier.

The Breck Sap Spout and Cover.

Joseph Breck & Sons, Boston, Mass., are placing on the market the sap spout and cover herewith shown. The spout, Fig. 1, is of galvanized malleable iron, to make it indestructible, and is inserted in the ½-inch hole V, as in Fig. 2, bored 1 inch into the tree. The point of the blade D is driven slightly into the body of the tree at the back of the hole V. The reduced portion M, of the spout body enters that portion of the hole V surrounded by the bark Z of the tree and forms a bearing for the spout. It is explained that by this means the grain of the wood is in no manner compressed by the spout when inserted in the spout hole, as the only bearing of the spout in the tree is the point at the back of the hole and the reduced body portion in the bark. The manufacturers remark that the sap lies within an inch of the bark, and that upon this principle the spout is made.

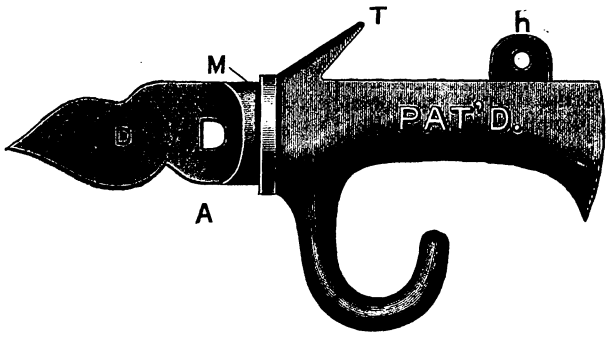

Fig. 1.—The Breck Sap Spout.

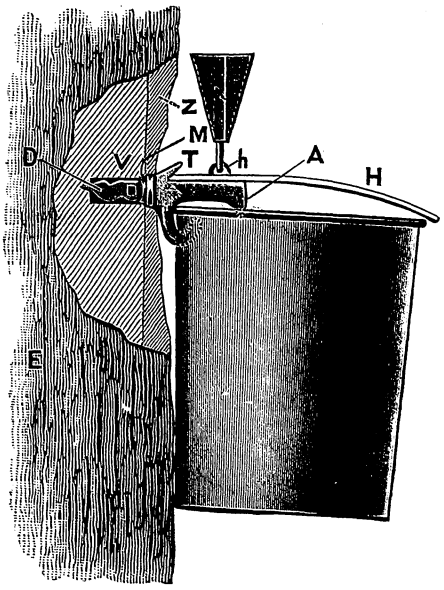

Fig. 2.—Sap Spout, Indicator, Bucket and Cover.

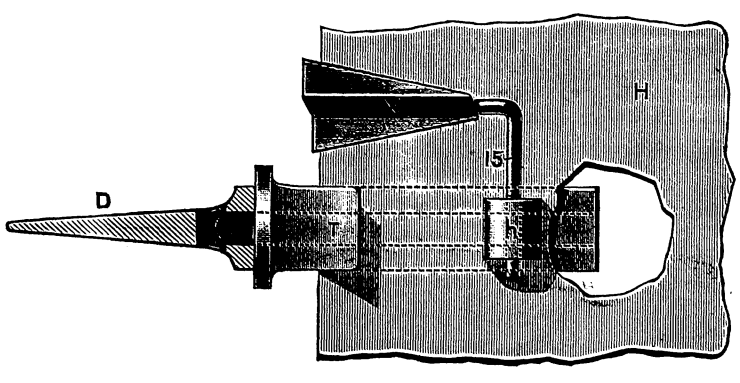
In Fig. 3 the cover is represented by H, and consists of a thin metallic sheet, provided with holes for receiving the spout eyes *h*. The edge of the cover is inserted under the undercut shoulder T on the spout, the eyes *h* projecting through the opening in the cover. The cover is designed to prevent rain, snow, sun and falling particles from entering the bucket and discoloring the sap collected. As the cover is attached directly to the spout, it interferes in no way with removing the bucket. It is stated that all sap spouts will freeze during a cold snap, but that the reflection of the sun on the tin cover will produce heat enough to thaw the spout from one to two hours earlier than others. In connection with the cover, in Fig. 3, is the pin No. 15 for attaching the cover to the spout, and carrying an indicator, X; this is designed to show, as far as it can be seen, that the bucket has been emptied, or *vice versa*. As each bucket is emptied and replaced on the hook, the indicator is to be turned up to show that the tree has been visited. At the next gathering the indicators are turned down. The point is made that often the same tree is visited two or three times unnecessarily after the sap has been gathered, and that the indicators prevent this loss of time; also that all the trees must be attended to, as any omission will be shown by the position of the indicator. The spouts and covers can be obtained separately if desired, also special bits by which all holes will be bored the exact depth. The manufacturers call attention to the fact that their spouts will not break in driving, and that the buckets will not twist the hooks off under the strain of high winds.



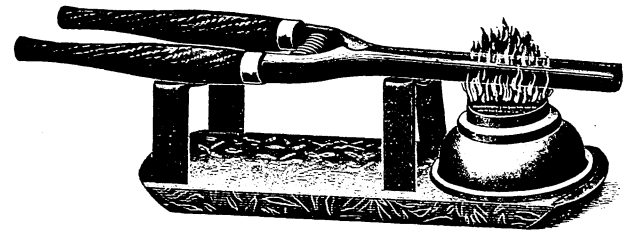


Fig. 3.—Cover and Indicator.

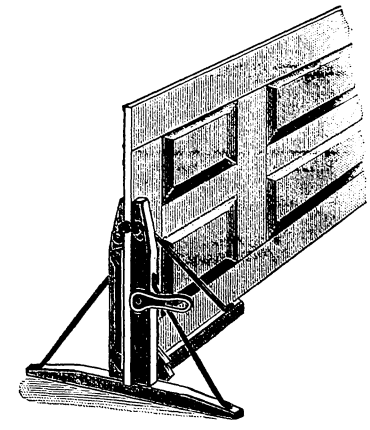
Princess Curling Iron Heater.

Thos. W. Houchin, 67–69 Park place, New York, has just brought out the Princess No. 1212 alcohol curling iron heater as here shown. It is similar in principle to one already marketed by him. The Princess is offered at much less cost, although affording practically the same results. The base is of decorated tin 5⅞ x 2¼ inches in size. At one end is a brass lamp with removable cap. The lamp is packed with asbestos and covered with wire gauze. It requires no trimming and is always ready for use when saturated with alcohol.



Non-Explosive Curling Iron Heater.

Occupying but little space, it is especially convenient in traveling. The heaters are neatly packed one each in a pasteboard box open at the ends.

Immel Door Clamp or Vise.

The Buckeye Mfg. Company, Union City, Ind., are offering the clamp or vise illustrated herewith. The device is

Immel Door Clamp or Vise.

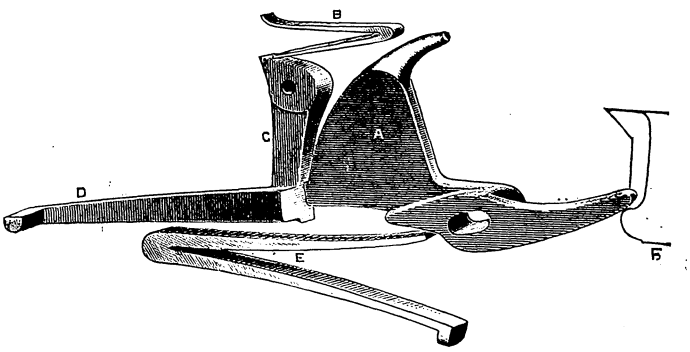
arranged to hold the door when planing the top or bottom as well as the sides. The clamp is designed to be carried from doorway to doorway, and may also be used for holding window sash when fitting them. It is explained that the instant the clamp is dropped on the floor it is ready for use, being held in place by its weight, resting on three sharp points protruding from it into

Hosted by Google

the floor. It may be folded up so as to take but little space in a tool box. Samples will be furnished by the company to any responsible dealer to be sold on three days' trial, and if not satisfactory it may be returned, and money will be refunded.

The Hallenbeck Hammerless Gun.

Syracuse Arms Company, Syracuse, N. Y., are introducing the hammerless gun, illustrations of which are herewith given. The lock, as shown in Fig. 1 is simple, being composed of but four pieces without any screws, and yet so firmly fitted, it is remarked, that one in constant use for the past year shows no signs of looseness. As shown in Fig. 2, the cocking arm, hammer and firing pin are all one piece, and the cocking arm or hammer has a bearing directly on the lug, with no intermediate pieces, making, it is stated, a remarkably easy cocking device. The cocking and firing mechanism is all contained in the metal frame, thus avoiding the cutting away and consequent weakening of the stock, and allows a large wood surface bearing on the frame. It is pointed out that the safety mechanism is simple and positive and that it is impossible to insert a shell in the gun until the hammers are at full cock. Another feature is the positive action of the cocking device, the lug hooking directly on the hammer without any intermediate or auxiliary pieces. It is explained that the main spring forces a connection between the hammer and the lug through the agency of a slot in the hammer, which device, it is claimed, is peculiar to only this gun. The barrels can be hooked on or taken off with the hammers in any position by removing the fore-end and the fore-end fastener holds it to the barrels whether the barrels are on or off of the frame. The whole gun can be taken apart and assembled without the use of other tools than a screw driver. The manufacturers state that their cheapest gun will have as close workmanship as the highest price guns, and that they will aim to do the finest of work both in fitting and finishing.



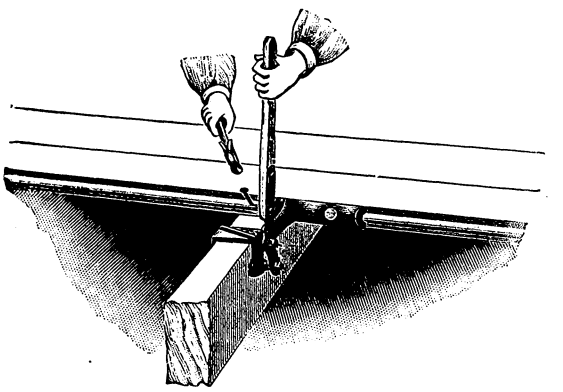


Fig. 1.—All Parts of Lock and Locking Device.

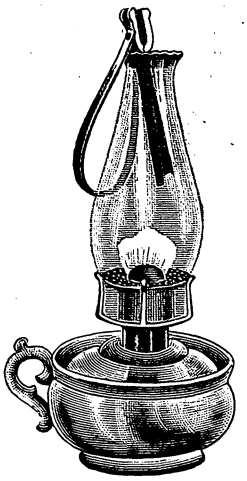
Cloyd's Flooring Clamp.



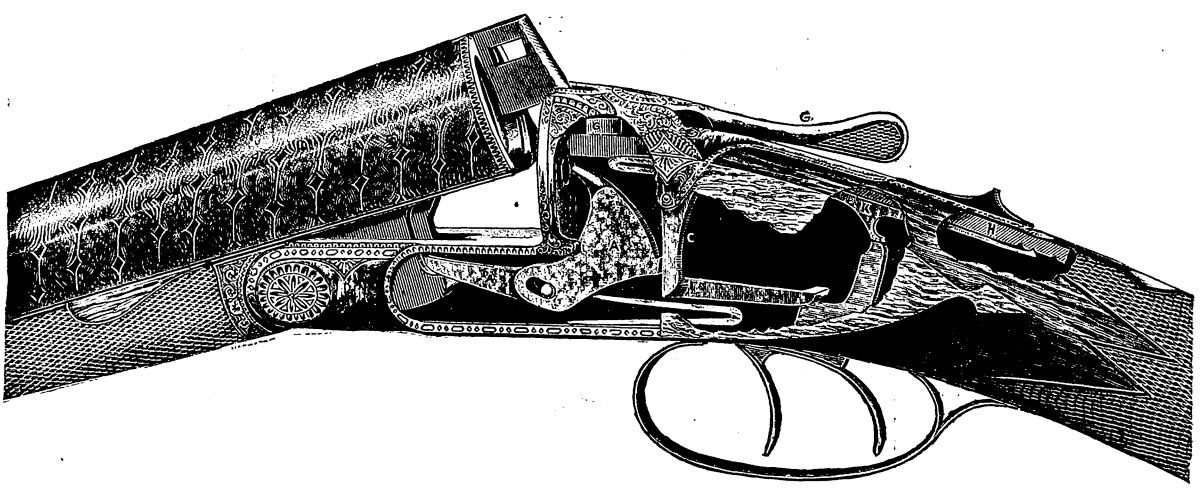
The accompanying illustration represents a flooring clamp offered by the Buckeye Mfg. Company, Union City, Ind. The clamp, it is stated, can be worked with one hand while using the hammer with the other. The point is made that the clamp will be found particularly useful when laying crooked and warped flooring, or in putting on crooked siding, and that with its use no chisel need be used or time wasted in getting siding or flooring in place for nailing.

Cloyd's Flooring Clamp.

Columbian Folding Curling Iron.

The cut herewith given illustrates both the form of the new Columbian folding curling iron and the manner in which it can be placed for heating over the flame of a kerosene lamp. There are no wood handles to get loose or burn off. As it folds into small space it is easy to carry. It is manufactured by the American Curling Iron Works, 72 to 74 Market street, Chicago.

Columbian Folding Curling Iron.



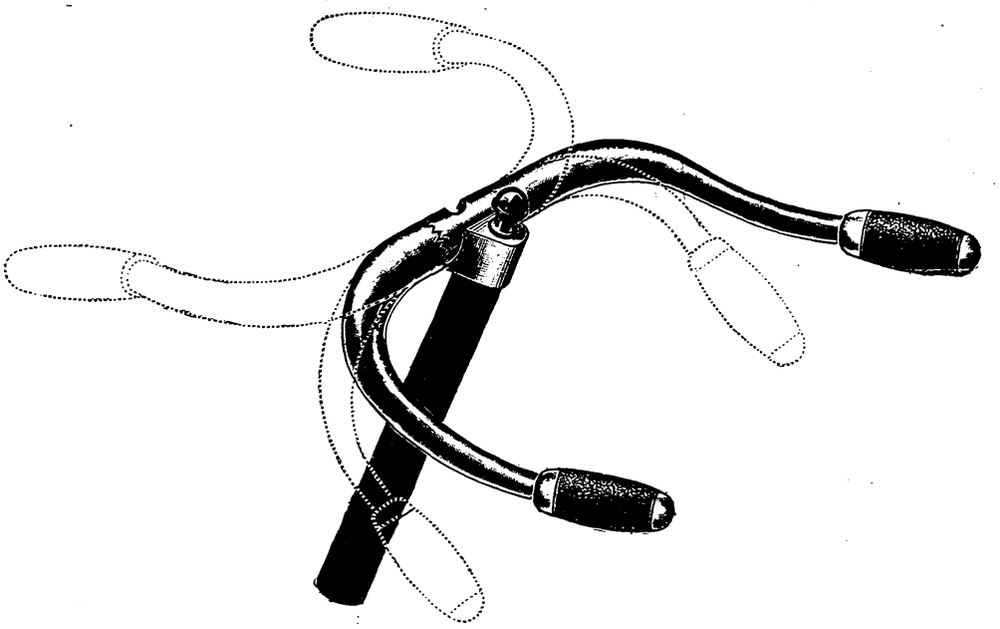


Fig. 2.—Lock and Cocking Device in Position.

Cable Adjustable Handle Bar.

The accompanying illustration is of the cable adjustable handle bar, controlled by the Yost Mfg. Company, Yost's Station, Toledo, Ohio. It is stated that the construction of the bar is such that its strength is fully equal to the solid bar, and that either end of the bar can be thrown up or down to any angle desired by the rider without the aid of a wrench. The dotted lines in the cut give a clear idea of the changes that can be made in the position of the grips, which may be given either an upward or a downward turn. The bar can be swung around in the fork upright and thus has a 2-inch adjustment to or from the saddle. When this is done and the proper distance of the grips from the saddle is secured, the ends of the bar can be exchanged or reversed, so as to get either the up turned or down turned grip, as may be wanted. The design of the bar is to solve the problem of how to secure any style of handle bar a rider may fancy without the annoyance of an objectionable increase in weight or the necessity of having a special bar made for him. The company expect to fit the adjustable handle bar for any make of machine.

Cable Adjustable Handle Bar.

The Darling Filters.

Darling Filter Company, 26½ South Water street, Cleveland, Ohio, are offering the filters represented in the accompanying cuts. The Self Cleaning filter, shown in Fig. 1, has a glass casing, which is used where the water pressure is not over 75 pounds to the square inch; where more than that a nickel casing is used. The manufacturers state that the filter never has to be taken apart to be cleaned and that a feature peculiar to this filter is the forcing of the cleaner against the porous tube, so that by revolving the goose neck at the top of the filter a few times the tube is cleaned. One of the valves at the bottom of the filter is for carrying off the accumulated dirt and the other valve is for supplying the water to be filtered. The point is made that through the glass casing the dirt can be seen accumulating on the porous tube and also disappear in cleaning. The filter has been tested in Cleveland, St. Louis, Kansas City and at other points. The report of an analytical chemist at Kansas City states that a chemical analysis and microscopical examination showed that all suspended matter, as well as a portion of the organic matter, had been removed and that the water was free from microbes existing in the unfiltered water. The manufacturers claim that the filter is absolutely germ proof, that it will filter from 10 to 15 gallons of water per hour, and that it is cleaned in three minutes, without shutting off the water or taking out the tubes. Fig. 2 shows the Little Darling filter, which is taken apart for cleaning. This is done by simply unscrewing the screw at the top of the filter, lifting the nickel casing out and brushing off the porous tube. The Little Darling is shown in Fig. 3 attached to a water cooler. The cooler

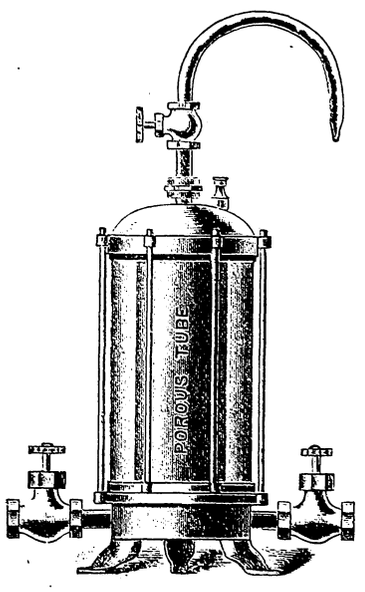

Fig. 1.—Darling Self Cleaning Filter.

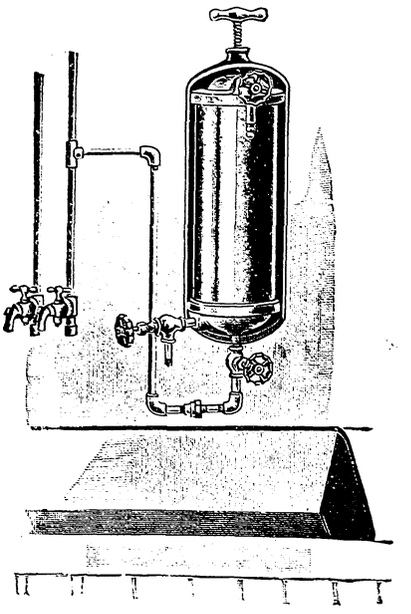

Fig. 2.—Little Darling Filter.

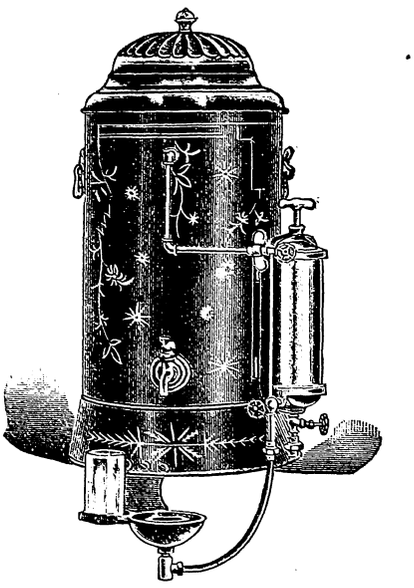

Fig. 3.—Little Darling Filter and Water Cooler.

Hosted by Google

is provided with two reservoirs, one for ice and the other to hold 3 gallons of filtered water. It also has an automatic valve for closing the filter when the reservoir is full. This arrangement is designed for use where a large quantity of filtered water is required.

Hayes' Safety Kettle Bottom.

The safety kettle bottom shown herewith is offered by the Diamond Hardware Company, 620 Atlantic avenue, Boston, Mass. It is made of steel, so as to give it requisite strength, and is principally designed to be placed inside a kettle, to prevent meat, vegetables and other articles of food sticking or burning on the kettle bottom while being boiled. It is explained that the bottom may be put to many other uses, as

Hayes' Safety Kettle Bottom.

follows: Turning it bottom side up in the kettle, it makes a good and convenient steamer; it may be used bottom side up on the top of the stove to keep hot tea, coffee or anything that it is not desirable to place on the bare stove; it may be placed in the same position on the table for a sad iron holder; if pies are not sufficiently baked on the bottom the baking may be completed by putting them in the kettle bottom on the top of the stove; it may be used for broiling meat or toasting bread by removing a stove lid and setting the bottom in the kettle hole, and in the same position a tea or coffee pot may be set in it to boil quickly.

The Yost Tire.

The tires and rims which the Yost Mfg. Company, Yost's Station, Toledo, Ohio, will fit on their gentlemen's wheel are illustrated in the cuts herewith given. The tire is of the inner tube pattern, and the outer cover, as shown in Fig. 1, has beaded edges to hold the wires which fasten it to the rim, one on each side. One of the wires is shown in Fig. 2. It is explained that the rim is so designed that it forms a grip for the outer cover, partially supporting it and relieving the wires of much of the strain. The wires are so arranged that they can be locked at any point on the tire, and the lever by which each wire is drawn up to the proper tension and locked has three points of adjustment, as in Fig. 3. It is stated that in case of a puncture the wire can be removed from either side and the inner tube taken out, patched and replaced very quickly and the rim adjusted to place almost instantly. The merits claimed for the tire are its simplicity, ease of repair and resiliency. It is stated that it is very sensitive on the road and will not roll, as the rims and wires bind the cover into place at the extreme outer edges of the rim, thus preventing its pulling away from the rim or rolling. The company will fit these tires and rims to any make of wheel desired.

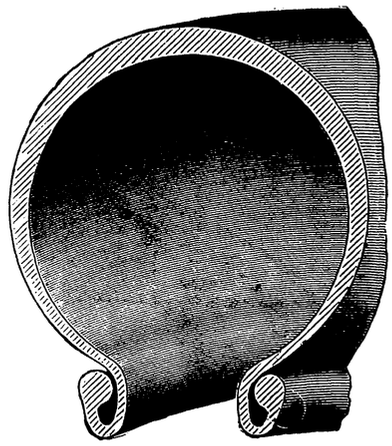

Fig. 1.—The Yost Tire.

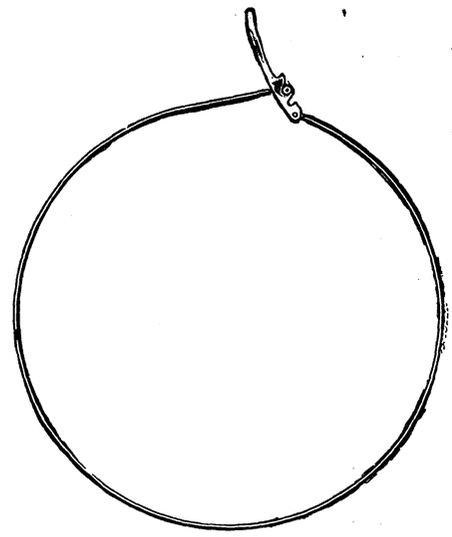

Fig. 2.—The Fastening Wire.

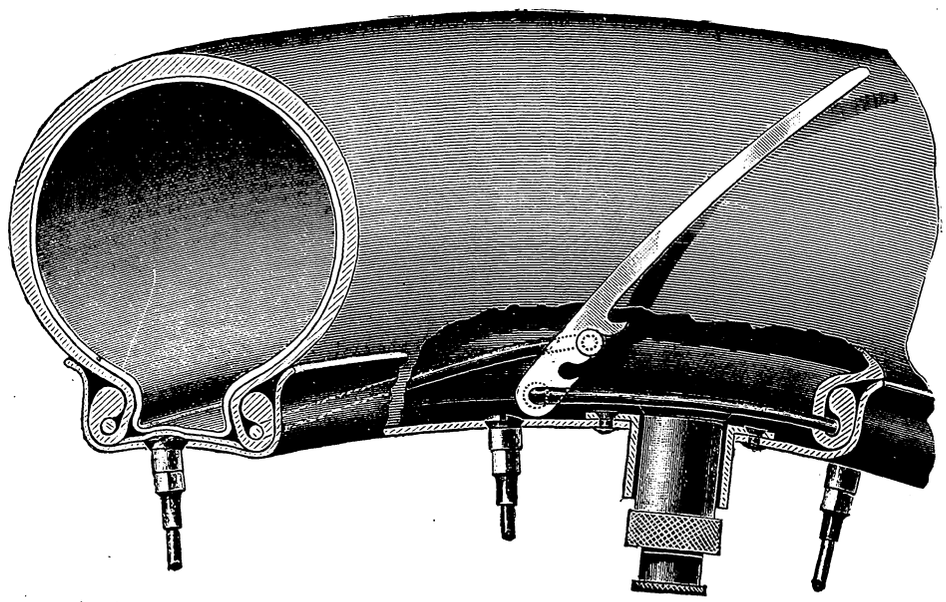

Fig. 3.—The Yost Tire and Rim.

The Mason Regulator Company of Boston have made three additions to their engineering series. No. 4, "Electricity for Engineers," contains such facts about electrical machinery as every engineer who has it under his charge needs to know; also all the rules of the Underwriters' Union for the installation of electric plants; 50 cents, post paid. No. 7, the "Engineers' Log Book," for keeping an accurate and systematic record of the engine room; 50 cents. No. 8, the "Chief Engineers' Record Book," for keeping the record of the mechanical plants of large factories; 75 cents.

Current Hardware Prices.

DECEMBER 27, 1893.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers, at the figures named.

The character @ is used to indicate a range of price; thus discount 50&10@50&10&5 % signifies that the goods in question are sold at prices ranging from discount 50 and 10 % to discount 50 and 10 and 5 %.

The Prospector's Field-Book and Guide in the Search for and the Easy Determination of Ores and other Useful Minerals. By Prof. H. S. Osborn, LL.D. Extract From the Preface: In the following pages we have attempted to present such a view of the whole subject of prospecting for the useful minerals that any liberally educated reader may fully comprehend our meaning. We have therefore explained special terms where we have thought it convenient to use them, and where the technically educated student would not need an explanation. The table of contents and index have both been carefully prepared, and being very full, will make reference to any subject in the volume easy and satisfactory. 44 engravings. 175 pages $1.50

"PENNSYLVANIA" FRUIT PICKER.

This Cut almost speaks for itself—the device being so much like the human hand shows at once the utility of the article.

AS A FRUIT PICKER IT HAS NO SUPERIOR.

It is made of Heavy Galvanized Wire, and easily adjusted to a pole.

It has been sold for several years, and the demand (as it is becoming known) is steadily increasing.

The difficulty of detaching fruit and securing it unbruised is apparent to every one so engaged. This overcomes the difficulty, and saves the finest fruit, which commands the highest prices.

THE LOW PRICE AT WHICH IT IS SOLD

Brings it within the reach of those who have but little fruit to gather as well as those who have large quantities.

Price per dozen, $6.00. It will gather Apples, Peaches, Pears, Etc.

MANUFACTURED BY **PENNSYLVANIA WIRE WORKS,**

EDWARD DARBY & SONS, - 233-235 Arch St., Phila, Pa.

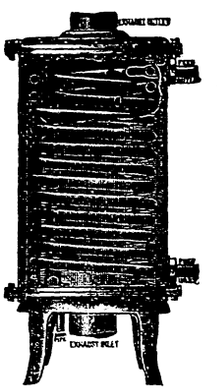
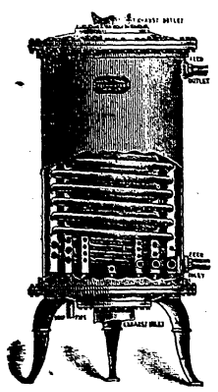
THE AMERICAN FEED WATER HEATER



Received the First Prize at the
Mechanics' Association Fair, - Boston, Mass.



What you get when you buy the AMERICAN HEATERS:

COPPER COILS,	NO RUSTING OUT,
SOLIDLY BRAZED,	NO LEAKY JOINTS,
GUN METAL FITTINGS	NO TROUBLE FROM EXPANSION,
AND CLAMP STAYS,	NO BACK PRESSURE,
STEEL SHELLS,	NO OIL IN BOILER.

We guarantee this Heater to be the Most Durable, Effective and Cheapest.

WHITLOCK COIL PIPE CO.,
27 South Street, - - - - - Elmwood, Conn.

The National Feed Water Heater

is a BRASS COIL HEATER, delivering water to the boilers at 212° Fahrenheit. It is low in price, but unequalled in efficiency. 500,000 H. P. in daily use attests its merits.

Coils and Bends of Iron, Brass, and Copper Pipe.

THE NATIONAL PIPE BENDING CO.,
98 River St., New Haven, Conn.

Small moulded work a specialty. Send for estimates for moulds and work.

An Experienced Engineer's Manner of Using

Dixon's Lubricating Graphite.

I feed Dixon's pure flake graphite into the steam chest with cups made from piping, as per sketch. In the nipple indicated by arrows I drive in a brass plug and drill a $\frac{1}{16}$ in. hole. I fill the cup once in three days and the steam takes care of the graphite. I have reduced the feed of cylinder oil one-half of the amount formerly used. I put one cup on each high pressure steam chest and the exhaust carries the graphite over into the low pressure cylinder and over into the air pump. It is used three times and discharged into the river. It is not worth trying to save it to use over, as I have heard some say they do. I hope engineers generally will make themselves better acquainted with graphite and learn the difference between Dixon's pure flake graphite and the ordinary commercial plumbago.

Maule's "Skeleton" Pipe Die

Two "Points" about it—only 2 (There are plenty more, but we only mention these two here.)

1

The First Cost to you of MAULE'S "SKELETON" PIPE DIE is less than that of any other Pipe-Threading Die—and

2

Before it becomes dull from use it will cut as many perfect threads as the best solid die extant, and when it is dull, you don't throw it away and buy a new one—Oh, no! You simply sharpen the cutters on a common grindstone, and so make it practically as good as it was at first, and this sharpening process may be repeated a number of times.

A sample One-inch "Skeleton" Pipe Die, either 2⅜ or 2½ x ¾ thick, by mail, postage prepaid, will cost you **62 cents,** and will be sent upon receipt of a Postal note for that amount.

DO NOT SEND US ANY POSTAGE STAMPS.

You may return such sample to us, at our expense, if, after seeing it, you do not consider it worth the price. Don't the above sound as if it might save you some money—if TRUE?

Hear What Others Say!

GLASGOW IRON CO.,
Steel Plates.

POTTSTOWN, PA., April 6th, 1893.

MESSRS. CRAIG RIDGWAY & SON, Coatesville, Pa.

Gentlemen:—It gives us pleasure to advise you that we have one of your Steam-Hydraulic Cranes in use for several years, during which time it has given us very good service. We have been using it to handle steel slabs and ingots varying in weights from 300 to 3400 pounds and we find it better adapted for this work than anything we have ever used. Indeed we value it so highly that we would not under any circumstances be induced to part with it. Trusting you will be still more successful in the future in the sale of this machine, which certainly merits all that is claimed for it, we beg to remain

Yours very truly,
GLASGOW IRON CO.

THE BENJ. ATHA & ILLINGWORTH CO.
Manufacturers of Steel.

NEWARK, N. J., April 6th, 1893.

MESSRS. CRAIG RIDGWAY & SON, Coatesville, Pa.

Gentlemen:—In reference to the Ridgway Crane which we have in use in our Steel Foundry, it gives us pleasure to report that it has worked almost continually since its erection, doing the work we have had for it to do in a most satisfactory manner. We are particularly well pleased with it and consider it especially adapted for use in the Moulding Shop on account of the ease with which the lift can be regulated and the steadiness with which it will lift heavy flasks.

Yours truly,
THE BENJ. ATHA & ILLINGWORTH CO.
Henry Atha.

WILLSON'S PAPER LETTERS

Ventilation and Heating. By JOHN S. BILLINGS A.M., M.D. In preparing this volume my object has been to produce a book which will not only be useful to students of architecture and engineering, and be convenient for reference by those engaged in the practice of these professions, but which can also be understood by non-professional men who may be interested in the important subjects of which it treats; and hence technical expressions have been avoided as much as possible, and only the simplest formulæ have been employed. It includes all that is practically important of my book on the Principles of Ventilation and Heating, the last edition of which appeared in 1889; but it is substantially a new work, with numerous illustrations of recent practice. Over 500 pages, 21 illustrations.....$6.00

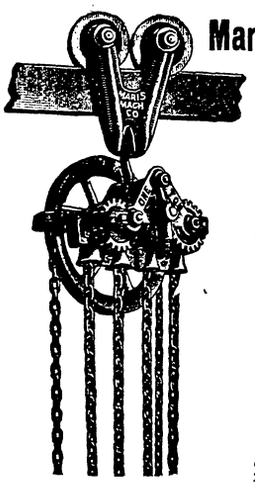
——) AND THE (——

ADMINISTRATION OF WORKSHOPS,

Public and Private.

BY CAPT. HENRY METCALFE.



322 Pages; 6¼ x 9½ inches. **CLOTH, $5.00**

This work is an effort to correct some of the wrong, and consequently unprofitable, methods of conducting manufacturing establishments, and proposes plans for more correct ones. A system of mechanical bookkeeping, based on the card catalogue method, dispensing with the use of books, by which the cost of manufactures may be promptly determined, either in gross or detail, as to component parts and operations thereon. Comprising a simple method of recording all dealings with material which relate to its procurement, expenditure or possession. Applied, with numerous practical illustrations, to the trust, accountability for public property and funds required of the U. S. Ordnance Department, with a review of its present practice. Illustrated with tables, forms of cards, etc.

ARE YOU HERE TO MAKE MONEY?

IF SO, THE PRICES WE ARE MAKING ON

OIL HEATERS AND GAS STOVES

WILL INTEREST YOU.

B. & B. Stoves are the Leaders.

B. & B Combination Oil Heaters and Cook Stoves are a great success, as proven by the many testimonials received from all parts of the country.

Every Stove is mounted on rollers, and can easily be moved from room to room. *They can be used in place of a range in the kitchen or in place of a base-burner in the parlor.* They are thoroughly well adapted to fill all requirements, *combining as they do all the qualities of a first-class Oil Heater and an elegant Parlor Cook Stove.*

If you happen to have one of them upstairs, *the tank can easily be removed and taken down to the kitchen to be filled*, and again replaced in the Stove.

Those who have used the old style Stove with tanks fastened in them as tight as if cast in the iron will appreciate this feature. They can be fitted with our 2-hole, 3-hole or 4-hole Extension Tops for regular 8-inch ware. We want your trade, and if you will give us a chance to quote you prices we will have it.

ASK FOR OUR NEW 80-PAGE CATALOGUE.

HART'S PATENT HEAVY STRAP HINGES.

It will be noticed that two thicknesses of iron surround the pin throughout its length and extend back upon the straps of the hinge, thus giving double thickness of iron at the points where most needed and more than double the strength of an ordinary strap hinge. The short or *inside leaves are galvanized* thus insuring easy working joints, and preventing *breakage on account of rust.*

BARBER IMPROVED BRACE.

Instead of reducing the price of our braces to meet competition, we have from time to time increased the cost of making the goods. Our latest improvement is the use of Ball Bearings, as seen in the cut. These balls prevent all wear, and cause the head to turn without friction. It is probably the best improvement which has been put on braces for many years. This has been the leading brace in market for a long time and we intend to make it worthy of its reputation for a long time to come. All Hardware Dealers will furnish them.

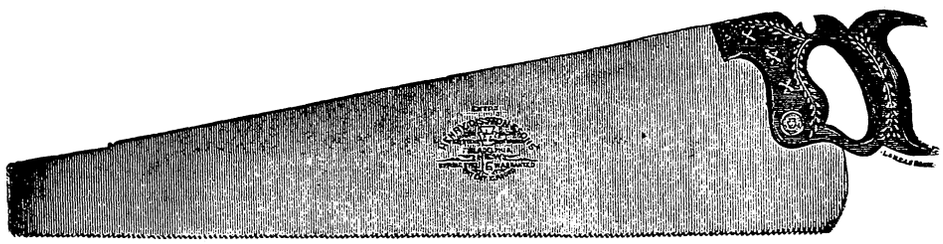
A man who has made a reputation for his goods knows its value as well as its cost and will maintain it."—HENRY DISSTON.

THE SAWS THAT LEAD THEM ALL

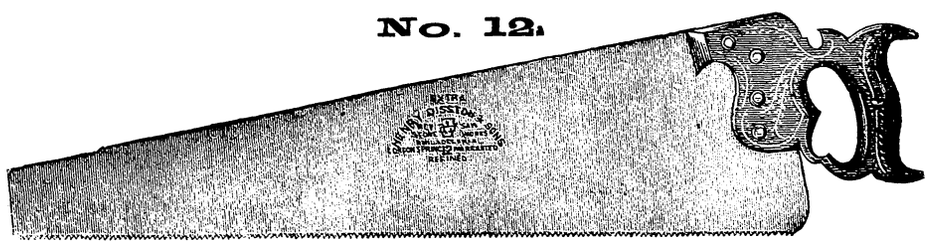
"THE SAW;" HOW TO CHOOSE IT, AND HOW TO KEEP IN ORDER, Sent Free on Receipt of Name and Post Office Address.



DISSTON & SONS' PATENT D-8 HAND SAW.

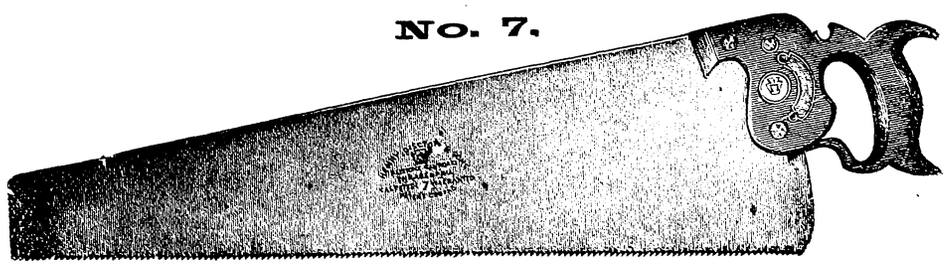
This Saw combines all the valuable improvements in Hand Saws that have been made by us of late. The first and most important is the hollow or skew back, the success of which can best be attested by the number sold. The peculiar shape of the butt or heel, coupled with the new method of fastening to the handle, give a full stroke of the blade without fear of catching or hooking in the work ; and as the handle is put further on the blade you have a full stop on the proper point and a greater command over your Saw, by reason of being two inches nearer the point, which must give more power.

The Saw being let into the handle on a circle, has a perfect bearing, which, with the new screws, makes it stronger and almost impossible to work loose, and avoids the unsightly gap that is seen on the back of the old style handle. All the above features are patented.



Our New No. 16 Premium Saw.

AN EXTRA FINE SAW IN EVERY RESPECT.



Having the Latest Close up Handle, Spring Steel Blade, Extra Thin Back, Finely Grained, with an Apple Handle and Four Brass Centennial Screws.

"SHUT DOWN!" What's the Matter?"

"BELT BROKE AGAIN!"

"See here, Mr. Foreman, if you don't have fewer stoppages I'll——"

"Stop, Mr. Proprietor, the fault is yours. Quit buying belts that crack, peel, open between plies, stretch and break, and I'll give you a smooth run. You think it economy to buy cheap belts from Worthless & Co. Why! the time lost and trouble and annoyance caused by shut-downs would pay the difference between good and bad belts ten times over. Why don't you buy Cleveland's 'Shield High Grade,' sold by Reliable & Co.? It has an established reputation, has been thoroughly tested, and is in use in all the large mills and elevators here. You take no chances on it. Besides, a strong warrantee is indelibly branded upon it, as no manufacturer would dare put on a poor belt. You remember that threshing machine man, whose engine we repaired, said he had a Cleveland High Grade Belt in use over five years, and if it will stand such severe work, it certainly will ours."

Trade  Mark.

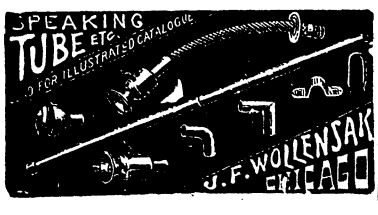
LABEL INDELIBLY STAMPED ON EVERY 30 FEET OF BELT.

GUARANTEE.

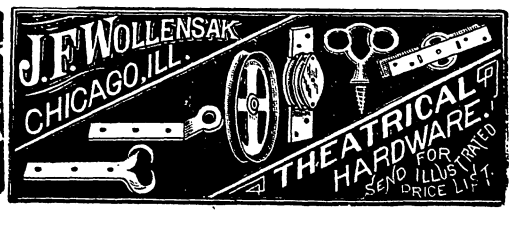
We Guarantee *our "Shield High Grade" Belt to be made of best long staple, 30 & 32-oz. cotton duck; To be the most durable, because it is made of best materials, by special machinery; To be the best selling belt, because it has the best reputation, a cleaner record of long service, and because its warrantee is stronger, bolder, broader than any other, and is irrevokable, protecting both dealer and consumer. We further guarantee that, should any belt, under fair and reasonable service, fail or give out from any defect in material or manufacture, to replace same free of charge, on return to us.*

Witness *our hand and seal.*

CLEVELAND RUBBER CO. SEAL CLEVELAND O.



Cleveland Rubber Works



Of the Mechanical Rubber Co.

We are the only manufacturers who indelibly stamp a warrantee on each and every belt (see copy of label) and it remains as long as the belt lasts; and who give a written guarantee (see fac-simile). Our threshing machine belts have made a wonderful record, and our endless belts have given splendid service, the splice being as strong as the solid part of the belt. Suction Hose for Portable Engines and all other purposes.

Just Published.—THIRD REVISED EDITION.

THE IRON AGE STANDARD HARDWARE LISTS

FOR USE IN PRICE BOOKS.

Compiled by R. R. WILLIAMS, Hardware Editor of The Iron Age.

This pamphlet contains the principal standard Hardware price-lists in as clear and compact an arrangement as possible, so as to permit their being advantageously cut out and inserted in the price book. In order to make them adapted to this use they are printed on thin and tough paper of fine quality and on only one side of the paper.

The success of the effort to give the lists in small space is illustrated in many of the lists, in which a clear and condensed arrangement is secured. For instance, the wrench list occupies but 3 inches by ¼ inch, while the list of Stove Hollow Ware, in very small space, gives the list prices on a large and important line of goods which often occupy several pages in catalogues. In several lists, such as Strap and T Hinges and Butts, a new arrangement is adopted, which is regarded as presenting these lists in a very convenient as well as condensed form.

As is obvious from the lists herewith reproduced, the shape and size of the different lists varies greatly, the aim being to give each list the smallest and most convenient arrangement possible. None of the lists are, however, more than 3½ x 6 inches in size, very few of them being as large as this and most of them very much smaller. In use it is intended that they shall be trimmed closely before they are inserted in price books, when they may be attached either by one edge close to the hinge of the book, as will, perhaps, be most convenient with the larger lists, permitting the use of the entire page for memoranda, or the smaller lists may be pasted on the page in connection with the entries in regard to discounts, freights, &c. Many of the lists are so compact in arrangement as when thus inserted to leave ample room for recording quotations.

STEEL HORSE SHOES.

SHOENBERGER & CO., PITTSBURGH, PA.,

After numerous and costly experiments have succeeded in manufacturing a special quality of soft homogeneous steel, specially adapted to the manufacture of Horse and Mule Shoes, and are now making from this steel Extra Swaged, and Government Pattern Horse and Mule Shoes. They give the best of satisfaction everywhere and we furnish them to the trade at the same prices as the regular iron shoe sold by ourselves and our competitors. We are at present making our Roadster Pattern Horse Shoes out of Iron, but we will make them of Steel also within a short time.

The advantages are that, being made of vastly superior material, they will never show signs of red-shortness or cold-shortness, will never split in the crease and will always show a much finer finish than any iron shoe.

We make the Steel Shoes lighter than the Iron, giving more shoes to the keg, as follows:

No. 1, 15 more shoes to the keg.
" 2, 14 " " " "
" 3, 10 " " " "
" 4, 8 " " " "

And other sizes in proportion.

No. 2 EXTRA SWAGED HIND.

We a'so beg to say that we have introduced improved machinery into our new factory and have doubled our capacity, and are now prepared to furnish the best shoe, either iron or steel, ever offered to the trade.

We would also call your attention to our Improved Steel Toe Calk, equal to any in the market. To secure the best wearing qualities use sand or borax in welding on a calk and cool off at a dark red, or still better, cool off without plunging in water. We make sizes numbers 1, 2, 3, 4, 5 and 6, packed in 25-pound boxes.

Write to us for information and prices, or apply to jobbers and dealers, who sell them everywhere.

PHILADELPHIA OFFICE, 206 So. Fourth St. } Correspondence invited { NEW YORK OFFICE 11 Pine St.

LE COUNT'S STRAIGHT TAIL DOG,

WITH STEEL SCREWS.

U. S. Standard, and the points hardened. To be driven from a stud in the face plate.

It is from the same pattern as the Heavy Steel Dog, and warranted, like that, not to break with any work.

No.	Inch.	Price.	No.	Inch.	Price.
1	¾	$0 60	11	2½	$1 45
2	⅞	70	12	3	1 60
3	1	70	13	3½	1 80
4	1⅛	80	14	4	2 10
5	1¼	80	15	4½	2 75
6	1⅜	95	16	5	3 25
7	1½	95	17	5½	4 00
8	1⅝	1 10	18	6	5 00
9	2	1 20	19	7	6 00
10	2¼	1 35	20	8	7 00

One set to 2 inch, $7.80. Full set, $44.10

This pattern will stand much more than a bent tail, and some prefer them on account of their direct action on the work.

SEND FOR CATALOGUE OF FULL LINE OF MACHINISTS' TOOLS.

"PENNSYLVANIA" FRUIT PICKER.

This Cut almost speaks for itself—the device being so much like the human hand shows at once the utility of the article.

AS A FRUIT PICKER IT HAS NO SUPERIOR.

It is made of Heavy Galvanized Wire, and easily adjusted to a pole.

It has been sold for several years, and the demand (as it is becoming known) is steadily increasing.

The difficulty of detaching fruit and securing it unbruised is apparent to every one so engaged. This overcomes the difficulty, and saves the finest fruit, which commands the highest prices.

THE LOW PRICE AT WHICH IT IS SOLD

Brings it within the reach of those who have but little fruit to gather as well as those who have large quantities.

Price per dozen, $6.00. It will gather Apples, Peaches, Pears, Etc.

MANUFACTURED BY **PENNSYLVANIA WIRE WORKS,**

BLAST FURNACE CONSTRUCTION

A SPECIALTY.

General Agents for Massick's and Crooke's Patent Fire Brick Stoves; Designs and Estimates for the construction of Blast Furnace Work, and for all kinds of Hot Blast Fire Brick or Pipe Stoves; and all other kinds of Brick Work pertaining to Steel Plants, Iron, Brick or Wooden Buildings, all kinds of Iron Construction in general.

☞ *We propose to put into successful operation all the plants we design and contract for.*

Architectural Iron and Steel and Its Application in the Construction of Buildings.

Fully Illustrated with Engravings from Original Designs.

GENERAL CONTENTS:

Chapter I. THE MANUFACTURE OF IRON AND STEEL. Articles 1 to 24.
Chapter II. FLOORS. Articles 25 to 51.
Chapter III. GIRDERS. Articles 52 to 66.
Chapter IV. CAST IRON LINTELS. Articles 67 to 76.
Chapter V. TRUSSES. Articles 77 to 90.
Chapter VI. STRUTS. Articles 91 to 101.
Chapter VII. CAST IRON COLUMNS. Articles 102 to 118.
Chapter VIII. WROUGHT IRON COLUMNS. Articles 119 to 124.
Chapter IX. STAIRWAYS. Articles 125 to 139.
Chapter X. ORNAMENTAL IRON. Articles 140 to 146.
Chapter XI. ELEVATOR ENCLOSURES. Articles 147 to 150.
Chapter XII. DOORS AND SHUTTERS. Articles 151 to 160.
Chapter XIII. FLOOR LIGHTS AND SKYLIGHTS. Articles 161 to 165.
Chapter XIV. HOLLOW BURNT CLAY. Articles 166 to 167.
Chapter XV. ANCHORS. Articles 168 to 177.
Chapter XVI. BOLTS. Articles 178 to 188.
Chapter XVII PRACTICAL DETAILS ILLUSTRATED. Articles 189 to 239.
Chapter XVIII. FINISHING IRON. Articles 240 to 246.
Chapter XIX. SPECIFICATIONS.
Chapter XX. TABLES.
Chapter XXI. SELECTED PAPERS ON IRON WORK, FROM THE NEW YORK BUILDING LAW, 1891.

BY WILLIAM H. BIRKMIRE,

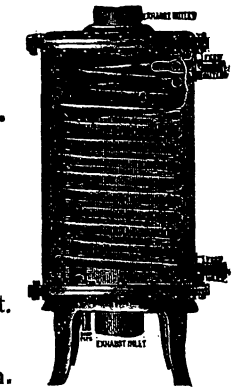
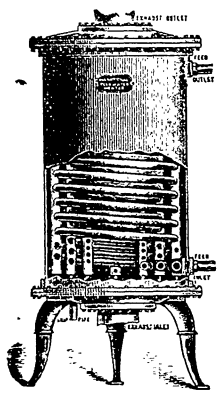
THE AMERICAN FEED WATER HEATER



Received the First Prize at the
Mechanics' Association Fair, - Boston, Mass.



What you get when you buy the AMERICAN HEATERS:

COPPER COILS,
SOLIDLY BRAZED,
GUN METAL FITTINGS
AND CLAMP STAYS,
STEEL SHELLS,
NO RUSTING OUT,
NO LEAKY JOINTS,
NO TROUBLE FROM EXPANSION,
NO BACK PRESSURE,
NO OIL IN BOILER.

We guarantee this Heater to be the Most Durable, Effective and Cheapest.

WHITLOCK COIL PIPE CO.,
27 South Street, - - - - - Elmwood, Conn.

The National Feed Water Heater

is a BRASS COIL HEATER, delivering water to the boilers at 212° Fahrenheit. It is low in price, but unequalled in efficiency. 500,000 H. P. in daily use attests its merits.

Coils and Bends of Iron, Brass, and Copper Pipe.

THE NATIONAL PIPE BENDING CO.,
98 River St., New Haven, Conn.

THE EYNON-EVANS MANUFACTURING CO.,

Patentees and Manufacturers of **THE EYNON-KORTING COMPOUND INJECTORS.**

Extra Heavy Globe and Angle Valves. Brass Castings up to 5000 lbs.

Blowers, Ventilators, Blast Nozzles, Exhausters, Brass Syphons, Acid Syphons, Condensers.

The Greatest Foundry Crane Known.

When a Crane is needed this is the one to get.

Hear What Others Say!

GLASGOW IRON CO.,
Steel Plates.

POTTSTOWN, PA., April 6th, 1893.

MESSRS. CRAIG RIDGWAY & SON, Coatesville, Pa.

Gentlemen:—It gives us pleasure to advise you that we have one of your Steam-Hydraulic Cranes in use for several years, during which time it has given us very good service. We have been using it to handle steel slabs and ingots varying in weights from 300 to 3400 pounds and we find it better adapted for this work than anything we have ever used. Indeed we value it so highly that we would not under any circumstances be induced to part with it. Trusting you will be still more successful in the future in the sale of this machine, which certainly merits all that is claimed for it, we beg to remain

Yours very truly,
GLASGOW IRON CO.

THE BENJ. ATHA & ILLINGWORTH CO.
Manufacturers of Steel.

NEWARK, N. J., April 6th, 1893.

MESSRS. CRAIG RIDGWAY & SON, Coatesville, Pa.

Gentlemen:—In reference to the Ridgway Crane which we have in use in our Steel Foundry, it gives us pleasure to report that it has worked almost continually since its erection, doing the work we have had for it to do in a most satisfactory manner. We are particularly well pleased with it and consider it especially adapted for use in the Moulding Shop on account of the ease with which the lift can be regulated and the steadiness with which it will lift heavy flasks.

Yours truly,
THE BENJ. ATHA & ILLINGWORTH CO.
Henry Atha.

SALE OF VALUABLE PROPERTY of the corporation known heretofore as The Albany Stove Company. Whereas, by order of the Supreme Court of the State of New York, granted in the City of Albany, N. Y., on the 10th day of October, 1893, the undersigned, receiver of the assets and effects of the corporation known heretofore as The Albany Stove Company, was directed to offer for sale the following described property, viz.: The real estate and buildings owned by the said corporation "The Albany Stove Company," situated on Tivoli street, in the City of Albany, N. Y., being the same premises used by the said corporation in carrying on its business of manufacturing stoves and iron castings, and is the same real estate conveyed by Eugene Van Rensselaer and others, as executors, etc., to The Capital Co-operative Foundry Company, by deed dated October 15, 1869, recorded in Albany County Clerk's office, December 15, 1869, in Book No 228 of Deeds, on page 241, and by Van Rensselaer Land Company to Albany Stove Company by deed dated January 10, 1890, recorded January 14, 1890, in Book No. 412 of Deeds, on page 318, together with the machinery, tools and implements used in carrying on the business above referred to.

Now, therefore, in pursuance of said order, the undersigned offers for sale to the highest bidder the property above described.

All bids to be sealed, and must be distinctly marked on the envelope in which they are enclosed, "Bids for property of the Albany Stove Company," and addressed and delivered to the undersigned at No. 82 State street, Albany, New York, on or before the 17th day of November, 1893. The right to reject any and all bids is hereby reserved, and sale can only be completed upon order of the court.

Bids will be opened by the receiver at the office of Francis H. Woods, No. 116 State street, Albany, New York, on Saturday, November 18, 1893, at 10 A M Terms, purchase price to be paid within twenty days after notification of acceptance of bid.

Dated October 11, 1893.

JOHN GUTMANN,
Receiver of The Albany Stove Company.

SALE OF VALUABLE PROPERTY of the corporation known heretofore as The Albany Stove Company. Whereas, by order of the Supreme Court, granted in the city of Albany, N. Y., on the 9th day of October, 1893, the undersigned, receiver of the assets and effects of the corporation known heretofore as The Albany Stove Company, was directed to offer for sale the following described property, viz.: The patterns, shop rights and flasks owned by the said corporation, and being the patterns, shop rights and flasks for the "Home Yale" parlor and range, "Yale" cook, "White Oak," "Art Yale Range," "Rose" range, "Oneida," and for other castings, formerly manufactured by the said corporation, a more particular description of which will be given on application to the undersigned.

Now, therefore, in pursuance of said order, the undersigned offers for sale to the highest bidder the property above described.

All bids to be sealed and must be distinctly marked on the envelope in which they are inclosed, "Bids for property of The Albany Stove Company," and addressed and delivered to the undersigned, at No. 82 State street, Albany, N. Y. on or before the 17th day of November, 1893.

The right to reject any and all bids is hereby reserved, and sale can only be completed upon order of the court Bids will be opened by the receiver at the office of Francis H. Woods, No. 116 State street, Albany, New York, on Saturday, November 18th, 1893, at 10 A M.

Terms: Purchase price to be paid within twenty days after notification of acceptance of bid.

Dated October 11th, 1893.

JOHN GUTMANN,
Receiver of The Albany Stove Company.

Locations for Factories.

The Industrial Department of the Chicago, Milwaukee & St. Paul Railway has charge of matters pertaining to the development of the territory traversed by the railroad and the directing of manufacturers to points best suited to their particular requirements.

Eight States are traversed by the 6,150 miles of the Chicago, Milwaukee & St. Paul Railway's tracks, namely: Illinois, Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota.

The company is daily in touch with the people in its territory, and from the number and varied nature of the industries locating and springing up on the line, and its acquaintance with the natural resources, has the facilities at hand to promptly furnish manufacturers with reliable information as to locations adapted to particular industries.

LUIS JACKSON,
Industrial Commissioner,
C., M. & St. P. R'y, 160 Adams Street,
Chicago, Ill.

LUXURY ON WHEELS.

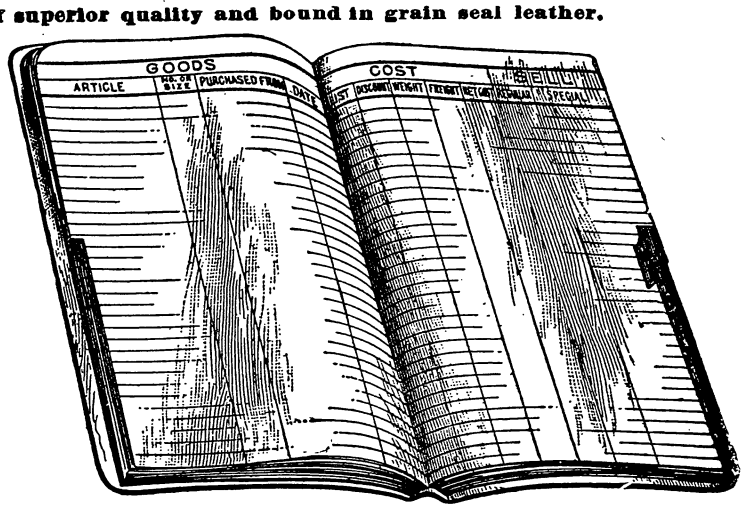
IMPROVED EDITION OF THE IRON AGE

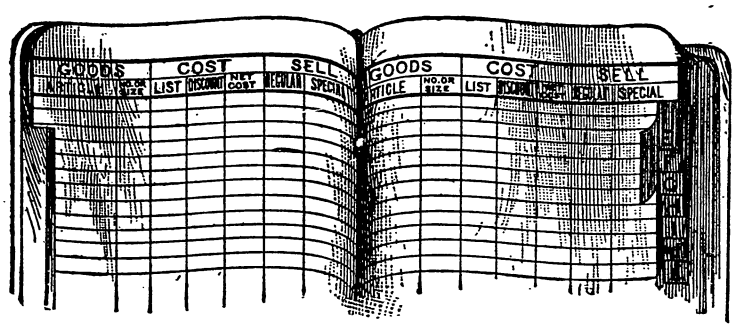
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of the Iron Age.



These Books are printed on paper of superior quality and bound in grain seal leather.

Columns are provided for the name and number or size, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses as an element of cost. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. This book goes into considerable detail in describing the goods and cost prices. It has been arranged in accordance with the views of many Hardwaremen whose methods are careful and exact.



Size, 4 x 7 in.; grain seal leather.

FOUR EDITIONS:

A, 200 pages,	$1.00
A F, 200 pages with flap,	1.25
A 2, 400 pages,	1.50
A F 2, 400 pages with flap,	1.75

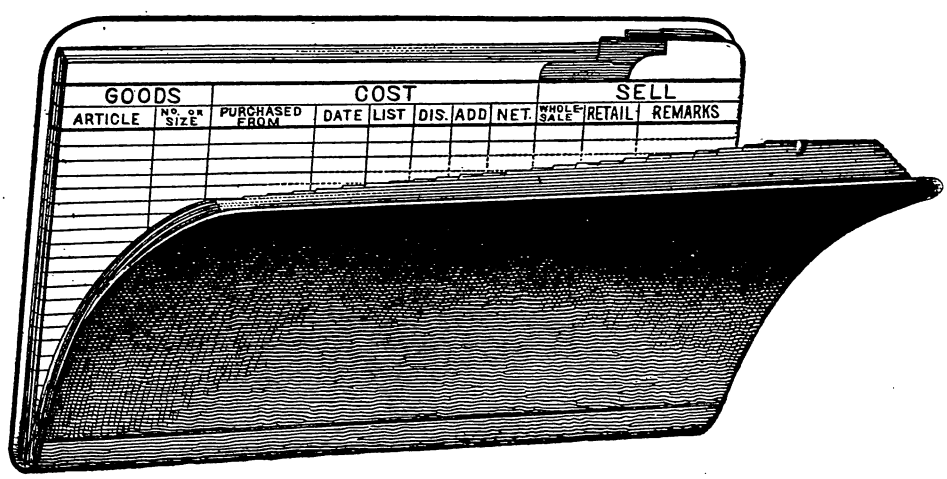
Hardware Price Book A.

Hardware Price Book B.

In this book each page is complete, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. It is adapted for office or store use, and by the use of familiar abbreviations, sufficiently large for the convenient and concise record of prices.

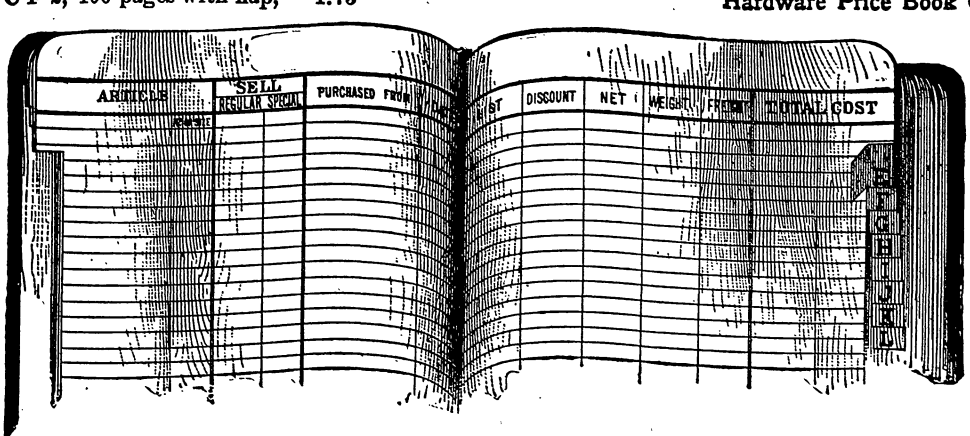
Size, 4 x 7 in.; grain seal leather.

FOUR EDITIONS:



B, 200 pages	$1.00
B F, 200 pages with flap,	1.25
B 2, 400 pages,	1.50
B F 2, 400 pages with flap,	1.75

The headings in Book C run across the top, in a line parallel with the hinge. In this way a very complete record can be kept on a single page. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses which it is desirable to include in the cost. Under the selling prices space is left for the wholesale price, the retail price, and also for any remarks in regard to cost of the goods, desirability of pushing them, or other matters.



Size, 4½ x 7¾ in.; grain seal leather.

FOUR EDITIONS.

C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75

Hardware Price Book C.

Hardware Price Book D.

Price Book D will recommend itself particularly for desk and store use, and for salesmen on the road.

The name of the article, its number or size and the selling price are the first to meet the eye on the left-hand page, as embodying information desired when the selling price is required. The other headings follow in convenient order, by which a detailed memorandum regarding the goods may be kept, the whole being seen at a glance. A number of pages at the back of the book are arranged for memoranda, which will be found a great convenience. This arrangement is adapted to the requirements of the trade in this direction. Size 5¼ x 8 in.; grain seal leather.

FOUR EDITIONS.

D, 200 pages,	$2.00
D F, 200 pages, with flap,	2.50
D 2, 400 pages.	$3.00
D F 2, 400 pages, with flap,	3.50

Sent, post-paid, on receipt of price by DAVID WILLIAMS, Publisher, 96-102 Reade St., New York.

ARE YOU HERE TO MAKE MONEY?

IF SO, THE PRICES WE ARE MAKING ON

OIL HEATERS AND GAS STOVES

WILL INTEREST YOU.

B. & B. Stoves are the Leaders.

B. & B Combination Oil Heaters and Cook Stoves are a great success, as proven by the many testimonials received from all parts of the country.

Every Stove is mounted on rollers, and can easily be moved from room to room. *They can be used in place of a range in the kitchen or in place of a base-burner in the parlor.* They are thoroughly well adapted to fill all requirements, *combining as they do all the qualities of a first-class Oil Heater and an elegant Parlor Cook Stove.*

If you happen to have one of them upstairs, *the tank can easily be removed and taken down to the kitchen to be filled*, and again replaced in the Stove.

Those who have used the old style Stove with tanks fastened in them as tight as if cast in the iron will appreciate this feature. They can be fitted with our 2-hole, 3-hole or 4-hole Extension Tops for regular 8-inch ware. We want your trade, and if you will give us a chance to quote you prices we will have it.

30 POUND SYLPH. Strongest Cycle of its weight on the market.

Guaranteed highest grade, and built for scorchers and hard road riders. By using tubular hubs, front fork, saddle post, etc., we do away with forgings and use heavier tubing. Our system of lap-brazing makes joints as strong as any part of the tubing, and thus we get a lighter and by far stronger machine. Investigate. Catalogue free. **ROUSE-DURYEA CYCLE CO., 146 G St., Peoria, Ill.**

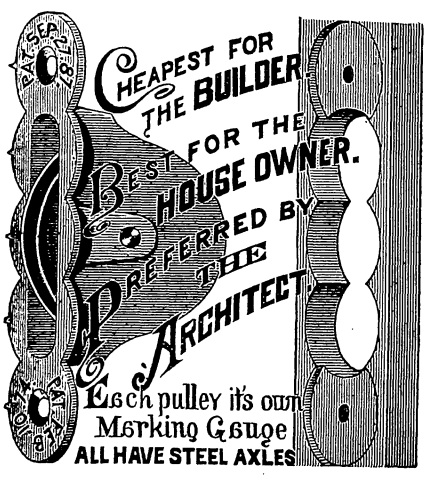
BARBER IMPROVED BRACE.



Instead of reducing the price of our braces to meet competition, we have from time to time increased the cost of making the goods. Our latest improvement is the use of Ball Bearings, as seen in the cut. These balls prevent all wear, and cause the head to turn without friction. It is probably the best improvement which has been put on braces for many years. This has been the leading brace in market for a long time and we intend to make it worthy of its reputation for a long time to come. All Hardware Dealers will furnish them.

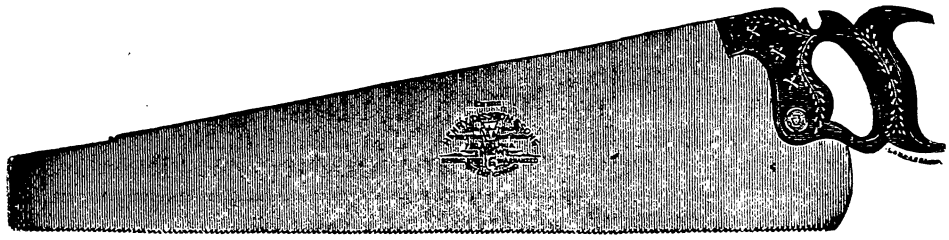
"If you want a Saw it is best to get one with a name on it which has a reputation.
A man who has made a reputation for his goods knows its value as well as its cost and will maintain it."—HENRY DISSTON.

THE SAWS THAT LEAD THEM ALL

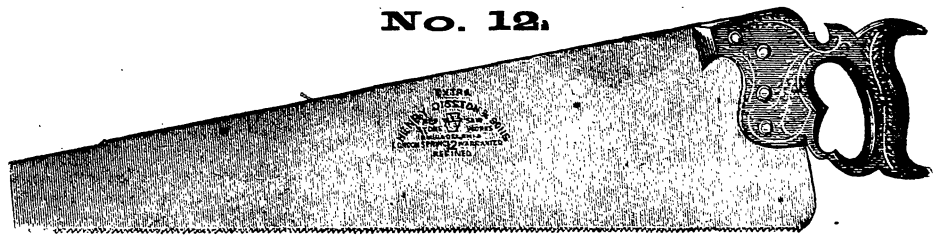
"THE SAW;" HOW TO CHOOSE IT, AND HOW TO KEEP IN ORDER, Sent Free on Receipt of Name and Post Office Address.



DISSTON & SONS' PATENT D-8 HAND SAW.

This Saw combines all the valuable improvements in Hand Saws that have been made by us of late. The first and most important is the hollow or skew back, the success of which can best be attested by the number sold. The peculiar shape of the butt or heel, coupled with the new method of fastening to the handle, give a full stroke of the blade without fear of catching or hooking in the work; and as the handle is put further on the blade you have a full stop on the proper point and a greater command over your Saw, by reason of being two inches nearer the point, which must give more power.

The Saw being let into the handle on a circle, has a perfect bearing, which, with the new screws, makes it stronger and almost impossible to work loose, and avoids the unsightly gap that is seen on the back of the old style handle. All the above features are patented.



Our New No. 16 Premium Saw.

BUTTON'S

Pat. Wire Cutter

AND PLIER COMBINED.

Specially Adapted for Use on Wire Fence.

Also Manufacturers of BLACKSMITHS' and MACHINISTS' STOCKS and DIES, PLUG and TAPER TAPS, HAND, NUT and SCREW TAPS, PIPE TAPS and REAMERS.

Price-List on Application.

Established by DANIEL B. KING, 1829.

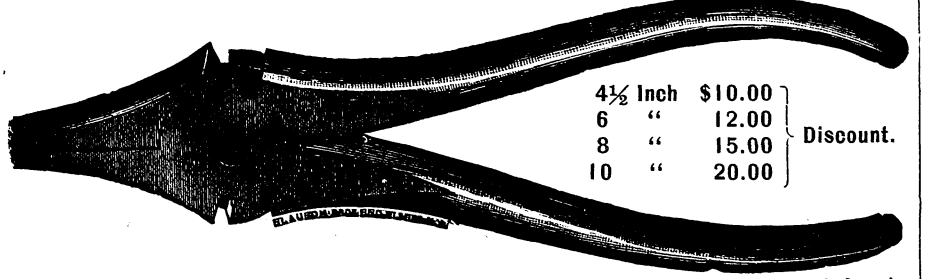
Cronk's Patent Wire Cutter AND Bender.

8 In., $15.00
10 In., 20.00
} Discount,—

This surpasses any Plier in the market for Cutting and Bending Wire, and can also be used in place of Hill's Hog Ringer. Is especially adapted to farmers' use in building Wire Fence, &c.

Our reasons for claiming that we have the best Pliers in the market are:

FIRST.—We use the best Tool Steel and they are nicely finished.



SECOND.—We combine both Flat and Round-Nosed Pliers in one; the concave and convex circles between the handles are used for bending wire in any desired shape.

THIRD.—The cupping in the Nose is used for pulling tacks, brads or nails, and can also be used in place of Hill's Hog Ringer.

FOURTH.—We can cut Barbed Wire, Barb Belt or any kind of Wire used for Fencing purposes. We also claim that we have the only Plier made that the Cutting Jaws cannot be broken.

By passing the Wire through the Pliers it makes a very handy cut and also holds the Wire after it is cut.

C. B. P.

4½	Inch	$10.00
6	"	12.00
8	"	15.00
10	"	20.00

} Discount.

What we claim for this plier is that it is made from best quality tool steel and is made heavier and stronger than any plier of its kind in the market and the finish is first-class. Also they are made so the jaws are parallel when used on wire from 9 to 14 gauge and will hold the wire solid.

LIGHTNING DRAIN CLEANER.

The Drain Cleaner is a hand machine used as a shovel. The dirt pan is made No. 18 Steel 3 inches deep and 12 inches long, with vertical end in rear. It has a decided advantage over other machines in dipping water and dirt. It is also used for letting down tiling in ditches, which is very convenient and saves extra labor of standing and working in muddy ditches. The iron adjusting rod can be used with great rapidity and ease and can be adjusted to pull or push with as quick a motion as may be desired. To use it in any particular shape tighten the set screw.

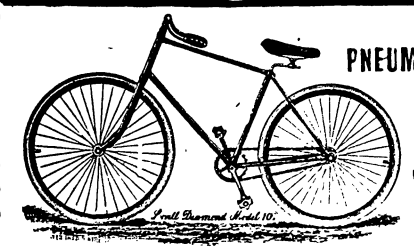
THE COST OF MANUFACTURES
—) AND THE (—
ADMINISTRATION OF WORKSHOPS,
Public and Private.

BY CAPT. HENRY METCALFE.

322 Pages; 6¼ x 9⅛ inches. CLOTH, $5.00



This work is an effort to correct some of the wrong, and consequently unprofitable, methods of conducting manufacturing establishments, and proposes plans for more correct ones. A system of mechanical bookkeeping, based on the card catalogue method, dispensing with the use of books, by which the cost of manufactures may be promptly determined, either in gross or detail, as to component parts and operations thereon. Comprising a simple method of recording all dealings with material which relate to its procurement, expenditure or possession. Applied, with numerous practical illustrations, to the trust, accountability for public property and funds required of the U. S. Ordnance Department, with a review of its present practice. Illustrated with tables, forms of cards, etc.

——ADDRESS——

The FRED J. MEYERS MFG. CO..

COVINGTON, KY.

F. J. MATTISON, Eastern Agent NEW YORK.

"BIG W. W. W. FOUR."

A certain company are claiming to be "sole manufacturers of Waddel's Coffee Mills," ("If you see it in the sun its so"). The statement is designed to mislead the trade. The old line of Waddel's Coffee Mills, which have been on the market the past five years, are not manufactured by *us.* We are making a new line of Coffee Mills which are guaranteed to grind twice as fast as similar goods, and each mill is labeled under a trade-mark "Ideal Coffee Mills manufactured by Waddel Wooden Ware Works; best on earth." Specify the new goods and order "Ideal Mills," and our word for it, you will not make a mistake. Address plainly

Waddel Wooden Ware Works or "4 W.,"

W. H. SILLS, - - Manufacturer,

86 Lake Street, CHICAGO, ILL.

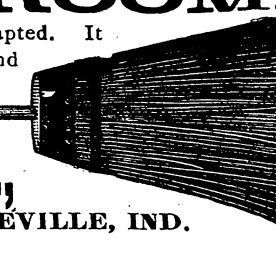
W. H. Neff, Cowan, Indiana. Says

The = Perfection = Washer

is the best on earth. Crowned with laurels wherever introduced. Do you want a Washer for your own use, or do you want to handle the best Washer in the world? If you do, get the best.

It is conceded to be the best by thousands of families who are using them to their entire satisfaction. So simple and easy to operate, a child ten years old can wash with it. Yet more durable than any washer in the market. It has a Steel Bottom, Metal Catches to hang the rubber on, Rubber Packing between the bottom and sides, which relieves the strain on the bottom by the contraction and expansion of the sides. It is handsomely painted, perfect and complete in every particular. The above statements are facts, and a glance at the Washer will convince any one. For further particulars, call on or address

W. H. NEFF, Manufacturer.



No. 4 ALL RATTAN BROOM.

Made for Switch, Snow, Yard, and all purposes to which an All Rattan Broom is especially adapted. THE ART OF SELLING.

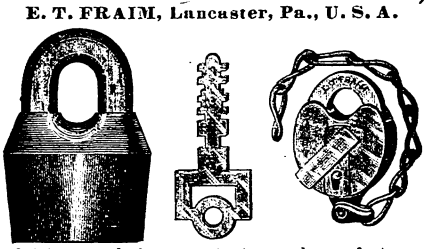
By F. B. GODDARD. 12mo. Flexible Cloth. 50 Cents.



In this book the author lets the reader into the secrets of the accomplished and successful sales man, illustrates his tact and finesse, and tells how he masters men; but beyond this, the work embraces much information which will be instructive and useful to all classes of business men. Besides suggestions to buyers, it contains chapters on "Changes in Business Conditions and Methods." "Salesmen's Compensation." "Retail Merchants and Salesmen." "Saleswomen, "How to Read Character," with a collection of clearly and tersely put important Legal Principles and Decisions Governing Sales. Sent, post-paid, upon receipt of price, by

DAVID WILLIAMS, Publisher and Bookseller, 96-102 Reade St., N. Y.

STEEL HORSE SHOES,

Like Steel Rails and Steel Nails,

HAVE COME TO STAY.

Shoenberger & Co., Pittsburgh, Pa.,

After numerous and costly experiments have succeeded in manufacturing a special quality of soft homogeneous steel, specially adapted to the manufacture of Horse and Mule Shoes and are now making from this steel Extra Swaged, Roadster and Government Pattern Horse and Mule Shoes. They give the best of satisfaction everywhere and we furnish them to the trade at the same prices as the regular iron shoe sold by ourselves and our competitors.

The advantages are that, being made of vastly superior material, they will never show signs of red-shortness or cold-shortness, will never split in the crease and will always show a much finer finish than any iron shoe.

We make the Steel Shoes lighter than the Iron, giving more shoes to the keg, as follows:

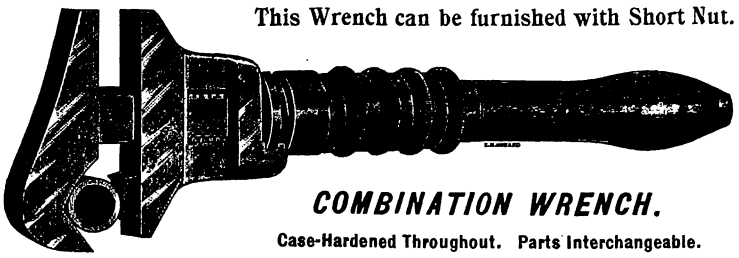
No. 1, 15 more shoes to the keg.
" 2, 14 " " " "
" 3, 10 " " " "
" 4, 8 " " " "

And other sizes in proportion.

No. 2 EXTRA SWAGED FRONT.

We also beg to say that we have introduced improved machinery into our new factory and have doubled our capacity, and are now prepared to furnish the best shoe, either iron or steel, ever offered to the trade.

We would also call your attention to our Improved Steel Toe Calk, equal to any in the market. To secure the best wearing qualities use sand or borax in welding on a calk and cool off at a dark red, or still better, cool off without plunging in water. We make sizes numbers 1, 2, 3, 4, 5 and 6, packed in 25-pound boxes.



Write to us for information and prices, or apply to jobbers and dealers, who sell them everywhere.

THE IRON AGE STANDARD HARDWARE LISTS

FOR USE IN PRICE BOOKS.

Compiled by R. R. WILLIAMS, Hardware Editor of The Iron Age.

This pamphlet contains the principal standard Hardware price-lists in as clear and compact an arrangement as possible, so as to permit their being advantageously cut out and inserted in the price book. In order to make them adapted to this use they are printed on thin and tough paper of fine quality and on only one side of the paper.

The success of the effort to give the lists in small space is illustrated in many of the lists, in which a clear and condensed arrangement is secured. For instance, the wrench list occupies but 3 inches by ¼ inch, while the list of Stove Hollow Ware, in very small space, gives the list prices on a large and important line of goods which often occupy several pages in catalogues. In several lists, such as Strap and T Hinges and Butts, a new arrangement is adopted, which is regarded as presenting these lists in a very convenient as well as condensed form.

As is obvious from the lists herewith reproduced, the shape and size of the different lists varies greatly, the aim being to give each list the smallest and most convenient arrangement possible. None of the lists are, however, more than 3½ x 6 inches in size, very few of them being as large as this and most of them very much smaller. In use it is intended that they shall be trimmed closely before they are inserted in price books, when they may be attached either by one edge close to the hinge of the book, as will, perhaps, be most convenient with the larger lists, permitting the use of the entire page for memoranda, or the smaller lists may be pasted on the page in connection with the entries in regard to discounts, freights, &c. Many of the lists are so compact in arrangement as when thus inserted to leave ample room for recording quotations.

Wrenches. Standard List.

Inches.	6	8	10	12	15	18	21
Black...	$9.00	$10.00	$12.00	$14.00	$24.00	$30.00	$36.00
Bright..	10.00	11.00	14.00	16.00	26.00	32.00	38.00

Some merchants use this pamphlet for reference, checking off invoices, etc., as it gives the leading lists in a more convenient form than they can otherwise be obtained. The lists are, however, intended primarily to be cut out and inserted in price books, and *can be used in connection with any of The Iron Age Hardware Price Books.*

Glue Pots. Tinned or Enameled

No. 4/0....	$4.50	No. 2	$8.40
3/0....	5.00	3.....	10.26
2/0....	5.50	4	12.42
0	6.00	5.....	14.58
1	6.75	6.	16.94

That the Standard Hardware Price Lists meet a want of the trade is evident from the fact that a Third edition is already called for.

EVERY HARDWAREMAN SHOULD HAVE A COPY. Price 25 cts.

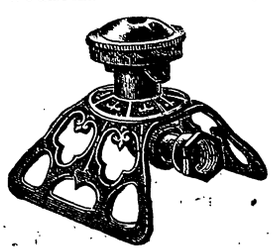
LAWN SPRINKLERS.



Japanese No. 12, Adjust.

Cactus No. 6.

We manufacture the BEST and CHEAPEST Lawn Sprinklers in the World.

The only Sprinklers which have no revolving parts to leak or wear out.
The only Sprinklers free from small holes, and which cannot become clogged with gritty substances.
The only Sprinklers which are adjustable and will give a spray as fine as the mist of Niagara, or as heavy as the area of the supply pipe.
The best Sprinklers for high pressures, and the only sprinklers which will give satisfaction with low pressures
We also manufacture the old style revolving sprinklers, but for our own use would not have them as a gift.
